Abstract	iii
Kurzfassung	v
Acknowledgements	vii
1. Introduction	1
1.1. Background & Motivation	1
1.2. Main Contributions	8
1.3. Outline	12
2. Cooperative Cellular Networks	15
2.1. Enhance Future Cellular Networks	15
2.2. System Model & Assumptions	24
2.3. Fundamentals	27
2.4. Channel Model	38
2.5. Figures of Merit	41
3. Locally Restricted BS Cooperation	45
3.1. Network Model	47
3.2. Block Zero-Forcing	51
3.3. Precoder Optimization with Block Zero-Forcing	53
3.4. Macro Diversity for High Mobility Users	57
3.5. Performance Evaluation	58
3.6. Critical Discussion	82
4. Small Cells and DF Relaying	93
4.1. Network Model & Transmission Schemes	96
4.2. Simulation Results	104
4.3. Critical Discussion	124
4.4. Conclusions	127
	ix

5. Distributed Cooperation with AF Relays	129
5.1. Multihop Networks	131
5.2. System Model	133
5.3. Distributed Optimization	136
5.4. Simulation Results	144
5.5. Block Zero-Forcing for Two-Way Relaying	149
5.6. Subcarrier Cooperative Two-Way Relay Network	150
5.7. Performance Evaluation	157
5.8. Application to Cellular Networks	161
6. Ubiquitous Relaying	165
6.1. Network Model	168
6.2. Transmission Schemes	180
6.3. Simulation Results	188
6.4. Critical Discussion	203
6.5. Aspects of Channel Estimation	206
7. The Cellular Relay Carpet	215
7.1. The Relay Carpet Concept	217
7.2. Network Model	228
7.3. Scaling Behavior	230
7.4. Power Control	234
7.5. Conclusions	243
8. Post-Cellular Networks	245
8.1. System Model	249
8.2. Cooperative Precoding	253
8.3. Constrained Cluster Optimization	259
8.4. Simulation Results & Discussion	263
8.5. Conclusions	278
9. Conclusions	281
9.1. Achievements & Insights	281
9.2. Outlook & Future Work	286
A. Simulation Parameters	291
List of Figures	307

Acronyms	311
Notation	315
Bibliography	317
Curriculum Vitae	331
