I	Persistence of Undercompressive Shock Waves	13
1	Introduction	15
1.1	Outline	17
2	Mathematical Model	21
2.1	Bulk Equations and Jump Conditions	21
3	Well-Posedness of the Linearized Problem	29
3.1	The Linearized System with Constant Coefficients	29
3.2	Stability Result	33
3.2.1	Uniform Kreiss-Lopatinskiĭ Condition	34
3.2.2	Energy Estimate	36
3.3	Existence Result	45
3.3.1	Adjoint Problem	46
3.3.2	Existence of Solutions to the Linear Problem	51
3.3.3	Regularity and Initial Boundary Value Problem	54
3.4	Numerical Verifications	56
4	Well-Posedness of the Variable-Coefficients Problem	61
4.1	Boundary Value Problem with Variable Coefficients	61
4.2	Stability Result	65
4.2.1	Paradifferential Operators and Paradifferential Calculus	65
4.2.2	Proof of Theorem 4.1	70
4.3	Existence Result	74
5	The Nonlinear Problem	77
5.1	Existence of Solutions to the Nonlinear Problem	79
A	Range as the Orthogonal Complement of the Kernel	83
B	Numerical Code to Section 3.4	85

II	Analysis of Periodic Waves in Dynamical Lattice Systems	87
1	Introduction	89
1.1	Outline	90
2	Nonlinear Lattice Systems	93
2.1	Reaction-Diffusion Equation	94
2.2	Navier-Stokes System	95
2.3	Hamiltonian System	96
3	Formal Derivation of Modulated Equations	103
3.1	Reaction-Diffusion Equation	104
3.2	Navier-Stokes System	108
3.3	Hamiltonian System	112
4	Discrete Bloch Transforms	117
4.1	Integral Transforms	117
4.2	Linear Evolution	119
5	Linear Stability	125
5.1	Reaction-Diffusion Case	125
5.2	Navier-Stokes and Hamiltonian Case	130
A	Entropy Equality for Discrete Euler-Korteweg Systems	133
