1	Mathematical Physics	1
1.1	Basic Concepts and Formulae	1
1.2	Problems	21
1.2.1	Vector Calculus	21
1.2.2	Fourier Series and Fourier Transforms	22
1.2.3	Gamma and Beta Functions	23
1.2.4	Matrix Algebra	24
1.2.5	Maxima and Minima	24
1.2.6	Series	25
1.2.7	Integration	25
1.2.8	Ordinary Differential Equations	26
1.2.9	Laplace Transforms	29
1.2.10	Special Functions	29
1.2.11	Complex Variables	30
1.2.12	Calculus of Variation	31
1.2.13	Statistical Distributions	32
1.2.14	Numerical Integration	33
1.3	Solutions	33
1.3.1	Vector Calculus	33
1.3.2	Fourier Series and Fourier Transforms	39
1.3.3	Gamma and Beta Functions	42
1.3.4	Matrix Algebra	44
1.3.5	Maxima and Minima	48
1.3.6	Series	49
1.3.7	Integration	51
1.3.8	Ordinary Differential Equations	57
1.3.9	Laplace Transforms	67
1.3.10	Special Functions	68
1.3.11	Complex Variables	72
1.3.12	Calculus of Variation	74
1.3.13	Statistical Distribution	77
1.3.14	Numerical Integration	85

2	Quantum Mechanics – I	87
2.1	Basic Concepts and Formulae	87
2.2	Problems	92
2.2.1	de Broglie Waves	92
2.2.2	Hydrogen Atom	92
2.2.3	X-rays	95
2.2.4	Spin and μ and Quantum Numbers – Stern–Gerlach's Experiment	96
2.2.5	Spectroscopy	97
2.2.6	Molecules	99
2.2.7	Commutators	100
2.2.8	Uncertainty Principle	101
2.3	Solutions	101
2.3.1	de Broglie Waves	101
2.3.2	Hydrogen Atom	103
2.3.3	X-rays	108
2.3.4	Spin and μ and Quantum Numbers – Stern–Gerlach's Experiment	111
2.3.5	Spectroscopy	115
2.3.6	Molecules	120
2.3.7	Commutators	123
2.3.8	Uncertainty Principle	128
3	Quantum Mechanics – II	131
3.1	Basic Concepts and Formulae	131
3.2	Problems	137
3.2.1	Wave Function	137
3.2.2	Schrodinger Equation	138
3.2.3	Potential Wells and Barriers	140
3.2.4	Simple Harmonic Oscillator	146
3.2.5	Hydrogen Atom	147
3.2.6	Angular Momentum	149
3.2.7	Approximate Methods	152
3.2.8	Scattering (Phase-Shift Analysis)	153
3.2.9	Scattering (Born Approximation)	154
3.3	Solutions	156
3.3.1	Wave Function	156
3.3.2	Schrodinger Equation	162
3.3.3	Potential Wells and Barriers	168
3.3.4	Simple Harmonic Oscillator	199
3.3.5	Hydrogen Atom	209
3.3.6	Angular Momentum	215
3.3.7	Approximate Methods	229
3.3.8	Scattering (Phase Shift Analysis)	233
3.3.9	Scattering (Born Approximation)	240

4	Thermodynamics and Statistical Physics	247
4.1	Basic Concepts and Formulae	247
4.2	Problems	251
4.2.1	Kinetic Theory of Gases	251
4.2.2	Maxwell's Thermodynamic Relations	253
4.2.3	Statistical Distributions	255
4.2.4	Blackbody Radiation	256
4.3	Solutions	258
4.3.1	Kinetic Theory of Gases	258
4.3.2	Maxwell's Thermodynamic Relations	266
4.3.3	Statistical Distributions	279
4.3.4	Blackbody Radiation	285
5	Solid State Physics	291
5.1	Basic Concepts and Formulae	291
5.2	Problems	294
5.2.1	Crystal Structure	294
5.2.2	Crystal Properties	294
5.2.3	Metals	295
5.2.4	Semiconductors	297
5.2.5	Superconductor	298
5.3	Solutions	299
5.3.1	Crystal Structure	299
5.3.2	Crystal Properties	301
5.3.3	Metals	303
5.3.4	Semiconductors	309
5.3.5	Superconductor	311
6	Special Theory of Relativity	313
6.1	Basic Concepts and Formulae	313
6.2	Problems	319
6.2.1	Lorentz Transformations	319
6.2.2	Length, Time, Velocity	320
6.2.3	Mass, Momentum, Energy	323
6.2.4	Invariance Principle	326
6.2.5	Transformation of Angles and Doppler Effect	328
6.2.6	Threshold of Particle Production	330
6.3	Solutions	332
6.3.1	Lorentz Transformations	332
6.3.2	Length, Time, Velocity	338
6.3.3	Mass, Momentum, Energy	342
6.3.4	Invariance Principle	351
6.3.5	Transformation of Angles and Doppler Effect	355
6.3.6	Threshold of Particle Production	365

7	Nuclear Physics – I	369
7.1	Basic Concepts and Formulae	369
7.2	Problems	382
7.2.1	Kinematics of Scattering	382
7.2.2	Rutherford Scattering	383
7.2.3	Ionization, Range and Straggling	385
7.2.4	Compton Scattering	387
7.2.5	Photoelectric Effect	388
7.2.6	Pair Production	390
7.2.7	Cerenkov Radiation	390
7.2.8	Nuclear Resonance	390
7.2.9	Radioactivity (General)	391
7.2.10	Alpha-Decay	393
7.2.11	Beta-Decay	393
7.3	Solutions	394
7.3.1	Kinematics of Scattering	394
7.3.2	Rutherford Scattering	399
7.3.3	Ionization, Range and Straggling	404
7.3.4	Compton Scattering	407
7.3.5	Photoelectric Effect	411
7.3.6	Pair Production	414
7.3.7	Cerenkov Radiation	415
7.3.8	Nuclear Resonance	416
7.3.9	Radioactivity (General)	417
7.3.10	Alpha-Decay	422
7.3.11	Beta-Decay	423
8	Nuclear Physics – II	427
8.1	Basic Concepts and Formulae	427
8.2	Problems	434
8.2.1	Atomic Masses and Radii	434
8.2.2	Electric Potential and Energy	435
8.2.3	Nuclear Spin and Magnetic Moment	435
8.2.4	Electric Quadrupole Moment	435
8.2.5	Nuclear Stability	436
8.2.6	Fermi Gas Model	437
8.2.7	Shell Model	437
8.2.8	Liquid Drop Model	438
8.2.9	Optical Model	439
8.2.10	Nuclear Reactions (General)	440
8.2.11	Cross-sections	442
8.2.12	Nuclear Reactions via Compound Nucleus	443
8.2.13	Direct Reactions	443
8.2.14	Fission and Nuclear Reactors	444
8.2.15	Fusion	447

8.3	Solutions	447
8.3.1	Atomic Masses and Radii	447
8.3.2	Electric Potential and Energy	449
8.3.3	Nuclear Spin and Magnetic Moment	450
8.3.4	Electric Quadrupole Moment	451
8.3.5	Nuclear Stability	454
8.3.6	Fermi Gas Model	456
8.3.7	Shell Model	457
8.3.8	Liquid Drop Model	458
8.3.9	Optical Model	460
8.3.10	Nuclear Reactions (General)	462
8.3.11	Cross-sections	468
8.3.12	Nuclear Reactions via Compound Nucleus	469
8.3.13	Direct Reactions	470
8.3.14	Fission and Nuclear Reactors	471
8.3.15	Fusion	483
9	Particle Physics – I	485
9.1	Basic Concepts and Formulae	485
9.2	Problems	488
9.2.1	System of Units	488
9.2.2	Production	489
9.2.3	Interaction	489
9.2.4	Decay	491
9.2.5	Ionization Chamber, GM Counter and Proportional Counters	493
9.2.6	Scintillation Counter	495
9.2.7	Cerenkov Counter	496
9.2.8	Solid State Detector	497
9.2.9	Emulsions	497
9.2.10	Motion of Charged Particles in Magnetic Field	497
9.2.11	Betatron	498
9.2.12	Cyclotron	499
9.2.13	Synchrotron	500
9.2.14	Linear Accelerator	501
9.2.15	Colliders	502
9.3	Solutions	503
9.3.1	System of Units	503
9.3.2	Production	504
9.3.3	Interaction	505
9.3.4	Decay	508
9.3.5	Ionization Chamber, GM Counter and Proportional Counters	512
9.3.6	Scintillation Counter	515

9.3.7	Cerenkov Counter	518
9.3.8	Solid State Detector	520
9.3.9	Emulsions	520
9.3.10	Motion of Charged Particles in Magnetic Field	521
9.3.11	Betatron	524
9.3.12	Cyclotron	524
9.3.13	Synchrotron	527
9.3.14	Linear Accelerator	530
9.3.15	Colliders	531
10	Particle Physics – II	535
10.1	Basic Concepts and Formulae	535
10.2	Problems	544
10.2.1	Conservation Laws	544
10.2.2	Strong Interactions	546
10.2.3	Quarks	550
10.2.4	Electromagnetic Interactions	551
10.2.5	Weak Interactions	552
10.2.6	Electro-Weak Interactions	556
10.2.7	Feynman Diagrams	556
10.3	Solutions	558
10.3.1	Conservation Laws	558
10.3.2	Strong Interactions	563
10.3.3	Quarks	572
10.3.4	Electromagnetic Interactions	577
10.3.5	Weak Interactions	578
10.3.6	Electro-weak Interactions	590
10.3.7	Feynman Diagrams	592
	Appendix: Problem Index	603
	Index	633
