Preface — IX

1 Introduction — 1

- 1.1 General Introduction — 1
- 1.2 Brief History — 3
 - 1.2.1 Inorganic Solar Cells — 3
 - 1.2.2 Organic and Hybrid Solar Cells — 4

2 Semiconductors and Junctions — 6

- 2.1 Introduction to Inorganic Semiconductors — 6
 - 2.1.1 Electronic States in Inorganic Semiconductors — 6
 - 2.1.1.1 Energy Bands in Solids — 6
 - 2.1.1.2 Electrons, Holes, and Polarons — 8
 - 2.1.1.3 Band Structure — 10
 - 2.1.1.4 Direct and Indirect Bandgaps — 17
 - 2.1.1.5 Density of States — 19
 - 2.1.2 Doping of Inorganic Semiconductors — 22
 - 2.1.2.1 Intrinsic Semiconductors — 22
 - 2.1.2.2 n-Type Semiconductors — 23
 - 2.1.2.3 p-Type Semiconductors — 25
- 2.2 Introduction to Organic Semiconductors — 26
 - 2.2.1 Carbon Hybridization and Organic Molecules — 26
 - 2.2.1.1 Carbon Orbitals and Orbital Hybridization — 26
 - 2.2.1.2 Single, Double, and Triple Bonds — 28
 - 2.2.1.3 Structural Formulas — 30
 - 2.2.1.4 Mesomerism — 33
 - 2.2.2 Electronic States in Organic Semiconductors — 34
 - 2.2.2.1 Conjugated Molecules — 34
 - 2.2.2.2 Molecular Orbitals — 37
 - 2.2.2.3 Optical Transitions — 45
 - 2.2.2.4 Excitons and Exciton Diffusion — 60
 - 2.2.3 Charge Transport in Organic Semiconductors — 67
 - 2.2.3.1 Charge Hopping in Disordered Systems — 67
 - 2.2.3.2 Macroscopic Parameters of Charge Transport — 78
 - 2.2.3.3 Doping of Organic Semiconductors — 79
- 2.3 Junctions — 81
 - 2.3.1 Inorganic p–n Homojunctions — 81
 - 2.3.2 Inorganic Heterojunctions — 89
 - 2.3.3 Schottky Junctions — 92

2.3.4	Organic–Organic Heterojunctions —	93
2.3.5	Organic–Inorganic Heterojunctions —	95
3	Working Mechanisms of Organic and Hybrid Solar Cells —	97
3.1	Basic Principles of Solar Cells —	97
3.1.1	Energy Conversion and the Solar Spectrum —	97
3.1.2	Shockley–Queisser Limit —	101
3.1.3	Photocurrent and Spectral Response —	102
3.1.4	Characteristics of a Solar Cell —	106
3.1.5	Parasitic Resistances and the Generalized Shockley Model —	108
3.2	Inorganic Junction Solar Cells —	113
3.2.1	p–n Junction Solar Cells —	114
3.2.2	Inorganic Heterojunction Solar Cells —	116
3.3	Organic Junction Solar Cells —	117
3.3.1	Charge Separation in Organic Solar Cells —	117
3.3.1.1	Donor–Acceptor Junctions for Exciton Splitting —	117
3.3.1.2	Charge Transfer States —	118
3.3.1.3	Detailed Energetic Picture of Charge Transfer States —	124
3.3.2	Flat Heterojunctions —	130
3.3.3	Bulk Heterojunctions —	132
3.3.4	Mixing of Polymers and Fullerenes —	135
3.3.4.1	Pure Materials —	135
3.3.4.2	Mixed Films —	143
3.4	Hybrid Junction Solar Cells —	150
3.4.1	Dye-Sensitized Solar Cells —	151
3.4.1.1	Liquid Electrolyte Dye-Sensitized Solar Cells —	151
3.4.1.2	Solid-State Dye-Sensitized Solar Cells —	156
3.4.2	Inorganic–Organic Hybrid Solar Cells —	158
3.4.2.1	Metal Oxide–Polymer Bulk Heterojunctions —	159
3.4.2.2	Dye-Sensitized Metal Oxide–Polymer Hybrid Solar Cells —	160
3.4.2.3	Hybrid Solar Cells with Inorganic Absorbers —	163
3.5	Perovskite Solar Cells —	165
3.5.1	History of Perovskite Solar Cells —	166
3.5.1.1	Perovskite Solar Cell Architectures —	167
3.5.2	Organo-Metal Halide Perovskite —	168
3.5.2.1	Structure and Phase Transitions —	169
3.5.2.2	Band Positions and Engineering —	170
3.5.3	Layer Preparation Methods —	171
3.5.3.1	One-Step Preparation Method —	172
3.5.3.2	Two-Step Preparation Method —	175
3.5.3.3	Flexible Perovskite Solar Cells —	176

3.5.4	Device Physics —	177
3.5.4.1	Perovskite Solar Cell Efficiency Measurements —	179
3.5.4.2	Photoexcited States and Relaxation Dynamics —	181
3.5.4.3	Excitons and Exciton Binding Energy —	182
3.5.4.4	Charge Transport and Carrier Diffusion Length —	183
3.5.4.5	Interfaces in PSCs —	184
3.5.4.6	Ferroelectricity —	189
3.5.5	Stability —	190
3.5.6	Outlook —	191
4	Characterization Techniques —	193
4.1	Characterization of Solar Cell Components —	193
4.1.1	Absorption Spectra of Photoactive Materials —	193
4.1.2	Emission Spectra of Photoactive Materials —	195
4.1.3	Ellipsometry —	198
4.1.4	Quality of Transparent Contacts —	202
4.1.4.1	Sheet Resistance —	202
4.1.4.2	Transmission —	204
4.1.4.3	Haacke's Figure of Merit for Transparent Contacts —	206
4.2	Steady-State Device Characterization —	208
4.2.1	Total Absorption Measurements —	208
4.2.2	Current Density–Voltage Measurements —	212
4.2.3	External Quantum Efficiency Measurements —	218
4.2.4	Light Intensity–Dependent Current–Voltage Measurements —	221
4.3	Time-Resolved Characterization Techniques —	226
4.3.1	Transient Photocurrent and Photovoltage Decay Measurements —	226
4.3.2	Photo-CELIV Measurements —	230
4.3.3	Impedance Spectroscopy —	233
4.3.4	Transient Absorption Spectroscopy —	238
4.3.5	Time-Resolved Photoluminescence Spectroscopy —	243
5	Fabrication and Device Lifetime —	248
5.1	Processing —	249
5.1.1	Processing Steps —	250
5.1.1.1	Substrate —	250
5.1.1.2	Transparent Conductive Electrodes —	252
5.1.1.3	Active Semiconducting Film —	254
5.1.1.4	Counter Electrode —	255
5.1.1.5	Encapsulation Layer —	255
5.1.2	Coating Technologies —	257

VIII — Contents

5.1.3	Module Design —	262
5.2	Stability and Lifetime —	265
6	Conclusion and Outlook —	268
	Bibliography —	269
	Index —	289
