Preface - Vortex-Fluctuation and Single-Photon Detection with a Nanowire ... IX
References XVI

1 Introduction 1
1.1 Quantum Nature and its Detection 1
1.1.1 Thermal Detectors 2
1.1.2 Ionization Detectors 4
1.2 Cryogenic Quantum Detectors at the Beginning of the 21st Century 5
1.2.1 Transition-Edge Sensors TES 7
1.2.2 Kinetic-Inductance Detectors KID 8
1.2.3 Superconducting Tunnel Junction Detectors STJD 9
1.2.4 Superconducting Nanowire Single-Photon Detectors SNSPD 10
References 14

Part I: Nanoscale Manufacturing Process Developments..... 23

2 Considerations for Nanoscale Manufacturing 25

3 Superconducting Thin-Film Preparation 27
3.1 DC-Magnetron Sputtering 27
3.1.1 The Physics of a DC Plasma Discharge 27
3.1.2 Magnetron Sputtering of NbN Thin Films..... 30
3.1.3 Magnetron Sputtering of Additional Superconducting Films 32
3.2 Electron-Beam Evaporation 33
References 34

4 Nanoscale-Precise Coordinate System: Scalable, GDSII-Design..... 37
4.1 Process Layers 38
4.2 Structure References 40
References 42

5 Thin-Film Structuring 43
5.1 Easy and Effective Nanoscaled Top-Down Manufacturing 44
5.2 Organic Resists 46
5.2.1 Resist Properties 46
5.2.2 Resist Fabrication: Spin Coating 47

5.3	Microscale Fabrication: Contact Photolithography	48
5.3.1	Principle of Photolithography	48
5.3.2	Physical Limit of Contact Photolithography	50
5.3.3	Perfect Contact Utilizing Newton's Interference Rings	51
5.3.4	Additive and Subtractive Lithographic Pattern Transfer	53
5.3.5	Alignment Structures	56
5.3.6	Controlling the Undercut during Development	57
5.3.7	Critical Dimensions & Resist Profile	59
5.4	Nanoscale Fabrication: Electron-Beam Lithography	61
5.4.1	The Electron-Matter Interaction	62
5.4.2	Discrete Beam-Deflection, Exposure Dose and Dynamic Effects ..	65
5.4.3	Alignment of the Stage Relative to the Beam	67
5.4.4	Clearing-Dose Determination (PMMA 950 k)	70
5.4.5	PMMA 950 k to Obtain a Lift-Off Profile: Critical Dimension 10 nm	72
5.4.6	Proximity Effect Model(s)	74
5.4.7	Simulated Proximity-Effect Correction	77
5.4.8	Manufacturing in the Sub - 100 nm Regime Without Correction for the Proximity Effect	82
5.4.9	ZEP 520 A Etch Protection Layer: Critical Dimension 60 nm	85
5.5	Symbiotic Optimization of the Nanolithography and RF-Plasma Etching ..	88
5.6	Reactive Ion Etching	91
5.6.1	Proper Operation of the Radio-Frequency Discharge: Low-Density Plasma Sources vs. High-Density Plasma Sources ..	91
5.6.2	Etching Rate Determination	94
5.6.3	Etched Photolithographic Critical Dimensions	98
5.7	The 50 nm Scale Compared to the Bit-Pattern on a Compact-Disk	100
	Appendix 5.1: Phenomenological Electron-Beam Proximity Effect	103
	Appendix 5.2: CASINO: Monte Carlo Simulation of the Electron-Matter Interaction	105
	References	106
6	Device Manufacturing	113
6.1	Fabrication Process Chains	113
6.2	Postfabrication Procedures: Sawing & Wire Bonding	115
6.3	Manufacturing Twenty Devices in One Run	116
	References	118
7	Proof of Principle of the Above Described Approach	119
7.1	30 nm Wide Au-Bridge	119
7.2	Superconducting Nb and NbN Meander	120
	References	122

Part II: Nanoscaled Superconductivity and its Application in Single-Photon Detectors 127

8 Motivation for Part II 129

References 131

9 Metallic and Superconducting States 133

9.1 Quantum Nature of the Solid State 133

9.2 Low-Temperature Superconductivity 136

9.2.1 Phenomenological London Theory 136

9.2.2 The Role of the Phonons:
Weakly- and Strongly-Coupled Superconductors 138

9.2.3 Microscopic Bardeen-Cooper-Schrieffer (BCS) Theory 138

9.2.4 Depairing Critical Current 141

9.2.5 Phenomenological Ginzburg-Landau Theory 143

9.2.6 About Type-II Superconductivity 143

9.2.7 Ginzburg-Landau and BCS Theory (Clean- and Dirty Limit) 146

9.3 NbN Thin Films: Extremely Dirty Type-II Superconductors 148

9.3.1 Coherence Length, Diffusivity & Resistivity 148

9.3.2 Energy Gap for Strongly-Coupled NbN 150

9.3.3 Magnetic Penetration Depth 150

9.3.4 Depairing-Critical Current in Nanoscaled Wires 151

9.3.5 Current-Dependence of the Energy Gap 155

Appendix 9.1: BCS Energy-Gap Formulæ 156

Appendix 9.2: Clean & Dirty Limit Expressions for the Characteristic
Length Scales of a BCS-Superconductor 160

Appendix 9.3: Quasiparticle Diffusivity in the Dirty Limit 167

Appendix 9.4: Thermodynamic Critical Field 168

Appendix 9.5: Depairing Critical Current Density 172

References 176

10 Fluctuation Mechanisms in Superconductors 181

References 183

11 Static Electronic Transport Measurements 185

11.1 Low Current Resistivity Measurements 185

11.2 Weak-Localization and Fluctuation Paraconductivity ($T > T_c(0)$) 186

11.3 Resistivity Measurements in a Magnetic Field B 190

11.4 Vortex-Dissipation below $T_c(0)$: BKT vs. Edge-Barrier Model 190

11.5 Critical-Current Measurements 197

11.6 Tables of Measured Sample and Material Parameters 198

Appendix 11.1: BKT Resistance for Finite Size Systems 203

References 205

12 Theoretical Models of Current-Induced Fluctuations 209

12.1 Berezinskii-Kosterlitz-Thouless (BKT) Transition:
Current-Assisted Thermal Unbinding of Vortex-Antivortex Pairs 209

12.2 Edge Barrier for Thermal and Quantum-Mechanical Vortex-Entry 211

12.2.1 Thermally-Induced Vortex Hopping 212

12.2.2 Quantum-Mechanical Vortex Tunneling 214

12.2.3 Cross-Over Temperature T_{co} 215

12.3 Thermal and Quantum Phase-Slip Mechanisms 215

12.4 Energy Scales for Fluctuations 217

12.5 Table of Calculated Model Parameters 219

12.6 Prediction of Fluctuation-Rates 220

Appendix 12.1: Minimum Energy of VAP under Bias 220

Appendix 12.2: Vortex-Entry Barrier Formalism 224

Appendix 12.3: Phase-Slip Formalism (LAMH Theory) 227

References 236

13 Time-Resolved Photon- and Fluctuation Detection 239

13.1 Detailed Model of the Detection Mechanism 239

13.2 Experimental Setup 243

13.2.1 Electronics 243

13.2.2 Single-Pulses Induced by Thermal Fluctuations 244

13.3 Dark Counts: Harbingers of the Phase Transition 247

13.4 Detection of Single-Photons in the 400 nm - 3 μ m Spectral Region 250

13.4.1 Photon Source 250

13.4.2 Analysis 251

13.4.3 Spectral Sensitivity 252

13.4.4 Count Rate at $\lambda = 400$ nm 253

13.4.5 Conclusion from Photon Detection 255

Appendix 13.1: Single-Photon Detection by SNSPD 255

References 257

Concluding Remarks and Recent Nanowire Developments 261

Summary of this Book 261

Past, Present and Future of Superconducting Nanowires 263

Possible Future Research about Fluctuation Phenomena 270
