Introduction——1

Part One: THEORETICAL PRELIMINARY

1	Demarcation and variability of metonymy——7
1.1	Conceptual metonymy——7
1.1.1	Definition/demarcation of metonymy——7
1.1.2	Internal typology of metonymy——20
1.1.3	The conventionalization of metonymy——26
1.2	Metonymy: A variationist CL view——27
1.2.1	The cross-linguistic dimension——27
1.2.2	The historical dimension——31
1.2.3	The lectal dimension——33
1.3	Metonymy: Semasiology and onomasiology——35
1.3.1	The semasiological perspective——36
1.3.2	The onomasiological perspective——37
1.4	The methodological state of the art in metonymy research——40
1.4.1	Why CL research needs an empirical approach——41
1.4.2	Overview of methods in CL metonymy research——42
1.5	Summary: Research gaps——46
2	Metonymy in expressions——47
2.1	Models for analyzing figurative composite expressions——48
2.1.1	Compositionality and analyzability——48
2.1.2	Fauconnier and Turner's blending model——50
2.1.3	Benczes's analysis of noun-noun compounds——53
2.1.4	Geeraerts's prismatic model——56
2.2	Metonymic mappings in Chinese expressions——63
2.2.1	Bringing the prismatic model to Chinese metonymic expressions——63
2.2.2	Various paths of metonymy in Chinese expressions——65
2.3	Some criteria for classification——79
2.3.1	Global metonymy versus parallel local metonymies——79
2.3.2	Internal metonymy versus external metonymy——85
2.3.3	Differentiation between alternative prismatic structures——89
2.4	Summary——92

Part Two: CASE STUDIES

3 The cross-linguistic perspective: Metonymies for PERSON — 97

- 3.1 Methodology — 98
 - 3.1.1 The Chinese data resources — 98
 - 3.1.2 The English data resource — 110
 - 3.1.3 Summary of the methodology — 119
- 3.2 Results — 121
 - 3.2.1 Variation in metonymic patterns for PERSON in general — 121
 - 3.2.2 Variation in metonymic patterns for different kinds of person — 127
 - 3.2.3 Variation in metonymic sources of a particular pattern — 137
- 3.3 Discussion — 152
 - 3.3.1 Paragons in Chinese culture — 153
 - 3.3.2 The carriage-clothing system in Chinese culture — 155
 - 3.3.3 The residence system in Chinese culture — 168
 - 3.3.4 Culture-bound conceptualizations of body parts — 172
 - 3.3.5 Collectivism versus individualism — 176
 - 3.3.6 Section summary — 178
- 3.4 Summary — 179

4 The diachronic perspective: Metonymies for WOMAN — 181

- 4.1 Methodology — 182
 - 4.1.1 The Corpus of Historical Chinese — 182
 - 4.1.2 Metonymy identification — 185
 - 4.1.3 Metonymy quantification and analysis — 188
- 4.2 Diachronic variation in metonymic patterns — 190
 - 4.2.1 Exploring and visualizing the data — 191
 - 4.2.2 Targets with relatively stable diachronic variation — 206
 - 4.2.3 Targets with a dominant trend in diachronic variation — 230
 - 4.2.4 Targets with highly fluctuating diachronic variation — 242
 - 4.2.5 Section summary — 263
- 4.3 Interactions with stylistic variation — 265
 - 4.3.1 Stylistic variation in metonymic patterns — 267
 - 4.3.2 Introduction of new metonymic items — 276
 - 4.3.3 Section summary — 281
- 4.4 Summary — 284

5	The lectal perspective: Metonymies for GOVERNMENT — 286
5.1	Methodology — 287
5.1.1	Data collection — 287
5.1.2	The variables — 298
5.1.3	The mixed-effects logistic regression model — 303
5.2	The general regression model for GOVERNMENT — 308
5.2.1	General impact of the predictors — 309
5.2.2	Specific influence of fixed effects — 310
5.2.3	The random-effect variable of verbs — 313
5.3	The separate regression model for MAINLAND CHINESE GOVERNMENT — 315
5.3.1	The separate mixed-effects model — 316
5.3.2	The lectal variation between Mainland and Taiwan Chinese — 317
5.4	Summary — 319
 Conclusion — 322	
Main findings and contributions — 322	
Limitations and further directions — 326	
 References — 329	
 Appendix — 351	
A.	Chinese/English metonymic mapping datasets — 351
B.	Distributions of main patterns for specific targets — 352
C.	Distributions of sources under a particular pattern for specific targets — 357
D.	References for meaning identification in the corpus — 361
E.	Classification of source/target concepts in Case 2 — 361
F.	Contributions of patterns for interpreting the MDS dimensions — 362
 Index — 365
