List of Figures	xi
List of Tables	xvii
Nomenclature	xix
Notation	xxiii
1. Introduction	1
1.1. Motivation	1
1.2. Goal of this thesis	2
1.3. Related work	3
1.4. Outline	5
2. Mathematical models	7
2.1. Continuum mechanics	8
2.1.1. Time-domain electrodynamics - Maxwell's equations	8
2.1.2. Inviscid, compressible fluid flow - Euler equations	10
2.1.3. Viscid, compressible fluid flow - Navier-Stokes equations	12
2.1.4. Isothermal, low-Mach fluid flow - Incompressible Navier-Stokes equations	13
2.1.5. Multicomponent low-Mach fluid flow	14
2.2. Kinetic theory	16
2.2.1. Ideal gases - Boltzmann equation	17
2.2.2. Multicomponent ideal gases	20
3. Lattice Boltzmann methods	23
3.1. Lattice Boltzmann methods for incompressible fluid flow	24
3.1.1. Asymptotic analysis	27
3.1.2. Boundary conditions	31
3.2. Lattice Boltzmann model for non-ideal mixtures	34
3.2.1. Semi-discretization in phase-space	34
3.2.2. Semidiscrete asymptotic analysis - the diffusive limit	37
3.2.3. Activity coefficients and thermodynamic factors	57
3.2.4. Concentration dependent diffusivities	59
3.2.5. Multiple relaxation time Lattice Boltzmann model	61
3.2.6. Temporal discretization	62

3.2.7. Boundary conditions	67
3.2.8. Coupled electro-convection-diffusion	72
3.3. Concluding remarks	72
4. Discontinuous Galerkin methods	75
4.1. A short reminder on spectral methods	76
4.2. Discontinuous Galerkin methods for hyperbolic conservation laws	79
4.3. De-aliasing, stability and variational crimes	84
4.3.1. Co-volume filtering	88
4.4. Discontinuous Galerkin methods for higher order equations	91
4.4.1. Symmetric Interior Penalty for Poisson equation	92
4.5. Shock capturing - Gibbs oscillations and post-processing for discontinuous solutions	93
4.5.1. High order convergence of moments	95
4.5.2. Padé approximants and Gegenbauer reprojection	114
4.5.3. Modal filtering	115
4.6. Some specific Discontinuous Galerkin discretizations	118
4.6.1. Time-domain electrodynamics	118
4.6.2. Time-domain electrodynamics with hyperbolic divergence cleaning	126
4.6.3. Inviscid, compressible flows	130
4.6.4. Viscid, compressible flows	133
4.7. Embedded boundaries	138
4.7.1. Embedded boundary methods for time-domain Maxwell equations	139
4.8. Runge-Kutta Discontinuous Galerkin methods	142
4.8.1. Some notes on the CFL condition and co-volume filtering	143
4.9. Concluding remarks	144
5. Numerical algorithms on distributed trees for high performance computing	147
5.1. Distributed trees and space filling curves	149
5.1.1. Mesh generation	151
5.1.2. Generating meshes with embedded geometries	152
5.2. Lattice Boltzmann methods on octrees	153
5.2.1. Performance of the multicomponent Lattice Boltzmann method	155
5.3. Discontinuous Galerkin methods on octrees	158
5.3.1. Polynomial spaces	159
5.3.2. Fast polynomial transformations	162
5.3.3. Maxwell equations	165
5.3.4. Efficient implicit-mixed-explicit Runge-Kutta methods for Maxwell equations with embedded boundaries	165
5.3.5. Compressible Euler equations	167
5.3.6. Compressible Navier-Stokes equations	169
5.3.7. Local refinement with hanging h/p -nodes	171
5.4. The massively parallel solver <i>ATELES</i>	175
5.4.1. Efficient data structures and parallelization concept	175

5.5. Performance	178
5.5.1. Performance measures and test setup	178
5.5.2. Performance maps and scalability results	179
5.5.3. Intra-element shared memory parallelization	183
5.6. Some remarks on parallel post-processing	185
5.6.1. Visualization of high order information	186
5.7. Concluding remarks	187
6. Numerical results	189
6.1. Multicomponent flows	189
6.1.1. Poiseuille flow	190
6.1.2. Stefan tube	191
6.1.3. Diffusive double layer	192
6.1.4. Taylor dispersion	197
6.1.5. Multicomponent channel flow around multiple obstacles	198
6.1.6. Multicomponent flow in a porous media	199
6.2. Electrodynamics	205
6.2.1. Embedded 2D cavities	205
6.2.2. Plane wave scattering by 3D sphere	211
6.2.3. Plane wave scattering by an aircraft configuration	215
6.3. Fluid flow	221
6.3.1. One-dimensional Riemann problems	221
6.3.2. Two-dimensional Riemann problems	227
6.3.3. Numerical convergence analysis for the compressible Navier-Stokes equations	234
6.3.4. Taylor-Green vortex	237
6.3.5. Two-dimensional supersonic free-stream jet	244
6.3.6. Three-dimensional transonic free-stream jet	247
7. Conclusion and future work	251
A. Appendix	253
A.1. Thermodynamic factors in the Maxwell-Stefan formulation	253
A.2. Analysis of the multicomponent Boltzmann equation	254
A.2.1. $\mathcal{H}$ -theorem for multicomponent ideal gases	254
A.2.2. Asymptotic analysis	257
A.3. Mathematical details of the multicomponent Lattice Boltzmann Method	269
A.3.1. Second moment of the second order asymptotic expansion	269
A.3.2. Species momentum transport equation	271
A.3.3. First order asymptotic expansion term with external forces	271
A.3.4. Second moment of the second order asymptotic expansion with external forces	272
A.4. Three-dimensional MRT Lattice-Boltzmann matrices	273

A.5. Viscosity tensors for the three-dimensional compressible Navier-Stokes equation	274
A.6. Brinkman penalization for the compressible Navier-Stokes equation . . .	278
A.6.1. Interior Penalty Discontinuous Galerkin discretization of the Brinkman penalized Navier-Stokes equations	279
A.7. Butcher-tableau for the third order IMEX time integrator	280
A.8. Efficient algorithms for the discrete Navier-Stokes equation	281
A.9. Simulation parameters	281
A.10. Coefficients for the numerical convergence analysis for the Navier-Stokes equations	285
References	287
