

Contents

I	Fundamentals of colour perception	
	<i>Stefan Gauss</i>	15
1	Human colour vision.....	15
1.1	The human eye.....	16
1.1.1	Optical structure	17
1.1.2	Signal processing and special features.....	17
1.2	The photoreceptor cells in the human eye.....	18
1.2.1	Spectral sensitivity of the receptors	19
1.2.2	Visual defects	20
1.3	Colour perception	21
1.3.1	Chromophoric attributes.....	21
1.3.2	Colour constancy	21
2	Light as Electromagnetic Radiation	22
3	Colour mixing	24
3.1	Additive colour mixing	24
3.2	Subtractive colour mixing.....	24
4	Interaction of light and matter	25
5	Standard illuminants and light sources	27
5.1	Standard illuminants.....	27
5.2	Light sources	29
6	Standard observer	30
7	CIE 31 system.....	32
7.1	Calculation of tristimulus values.....	32
7.2	Chromaticity coordinates	34
8	CIELAB system	35
8.1	The L^* , a^* , b^* coordinates	37
8.2	The L^* , C^* , h coordinates	38
8.3	Colour differences	38
8.4	Colour tolerances and MacAdam ellipses	41
9	Metamerism.....	42
9.1	Colour constancy	43
9.2	Metameric pairs.....	43
9.3	Special metameric index.....	45
II	Colour measurement, colour measurement systems and visual colour assessment	47
1	Principles behind measuring coloured surfaces	
	<i>Gerhard Rösler, translated by Manfred Binder</i>	47

1.1	Analytical and visual characterisation of colour	47
1.1.1	Method A: Tristimulus colorimeter	47
1.1.2	Methods B and C: Spectrophotometer with polychromatic illumination	49
1.1.3	Method D: Spectrophotometer with monochromatic illumination.....	49
1.1.4	Method E: Bi-spectral measurement	50
1.1.5	Spectral measuring range, resolution and illumination.....	51
1.1.6	Spectrometers, monochromators and detectors	52
2	Measuring geometries	
	<i>Gerhard Rösler, translated by Manfred Binder</i>	52
2.1	Sphere geometries for reflectance measurements	55
2.2	Directional geometries for reflectance measurements.....	56
2.3	Measuring geometries for different sample types and sample properties.....	58
2.4	Recommended geometries for transmission measurements	58
2.5	Notes on choosing the right geometry	60
2.6	Multi-angle geometries.....	60
3	Measuring geometries for special effect pigments	
	<i>Peter Gabel</i>	61
3.1	Optical principles behind special effect pigments	61
3.2	Measuring geometries for metallic pigments.....	62
3.3	Measuring geometries for special effect pigments	62
3.4	New measuring geometries – applications for special effect pigments.....	64
3.4.1	New measuring geometries – new developments	65
4	Sample preparation	
	<i>Gerhard Rösler, translated by Manfred Binder</i>	66
5	Recommended colourimetric conditions	
	<i>Gerhard Rösler, translated by Manfred Binder</i>	68
5.1	Calibration of the colour-measuring instrument.....	69
5.2	Ambient conditions	69
5.3	Black calibration	69
5.4	White calibration	69
5.5	Calibration function	69
5.6	Control measurement	70
5.7	Storage of calibration standards	70
5.8	Laboratory report.....	70
6	Influence of the surface	
	<i>Gerhard Rösler, translated by Manfred Binder</i>	70
7	Special case: optical brighteners and fluorescence	
	<i>Gerhard Rösler, translated by Manfred Binder</i>	72
8	Sources of error in colour measurements	
	<i>Stefan Gauss</i>	73
8.1	Errors in sample preparation.....	74
8.2	Instrument error.....	74
8.3	Experimental error.....	75
9	Profiling of measuring instruments and colour management	
	<i>Gerhard Rösler, translated by Manfred Binder</i>	76

9.1	Commonly used colour standards for profiling colour-measurement instruments	76
9.2	Set of colour standards for colour-measuring instruments	77
9.3	Instrument maker accuracy and profiling	77
10	Non-contact colour measurement <i>Gerhard Rösler, translated by Manfred Binder</i>	77
III	Visual colour assessment <i>Gerhard Rösler, translated by Manfred Binder</i>	79
1	Colour perception and colour deficiency	79
2	Light booths	80
3	Visual colour assessment of samples with effect coatings	81
3.1	Method: Sample modulation	82
3.2	Method: Illumination modulation	82
3.3	Method: Observer modulation	83
3.3.1	Assessment of special effect pigments by the method of observer modulation	84
3.4	Summary of visual assessment of effect-coated samples	84
IV	Colour-order systems <i>Wilhelm Kettler</i>	85
1	Introduction and definition	85
2	Psychometric scales	85
3	Colour scales	86
4	Colour notation systems	86
4.1	CIELAB, CIELUV, and DIN99	86
4.2	Munsell colour system	87
4.3	DIN colour system	88
4.4	NCS colour system	89
4.5	OSA-UCS colour system	90
4.6	RAL design system	92
5	Colour-naming systems and colour-card collections	93
5.1	RAL system	93
5.2	British Standards Institution (BSI)	93
5.3	Pantone colour system	94
6	Link between colour-order systems	94
7	Decisions	95
V	Instrumental colour difference assessment <i>Wilhelm Kettler</i>	98
1	Introduction	98
2	Geometric structure of colour difference models	98
3	Colour difference model $CMC(k_L:k_C)$	99
4	Colour difference model $BFD(k_L:k_C)$	101
5	Colour difference model CIE94	102
6	Colour difference model CIEDE2000	102

7	Colour space DIN99.....	104
8	Parametric effects	106
9	Comparative analyses of the performance of modern colour difference models	107
9.1	Normalisation.....	108
9.2	Lightness scale.....	108
9.3	Chroma and hue scales	110
9.4	Total colour difference.....	110
10	Appraisal of the current state of colour difference metric	112
11	Model extensions for goniochromatic colours	113
VI	Definition and application of colour tolerances	
	<i>Wilhelm Kettler</i>	117
1	Tolerance and acceptance	117
1.1	Euclidean colour space.....	117
1.2	Non-Euclidean colour space	118
2	Psychophysical measurements	118
3	Visual colour assessment	119
4	Statistical threshold determination.....	119
5	An experiment to define colour tolerances.....	121
6	Significance of colour measurement results.....	127
6.1	Multivariate statistics.....	127
6.2	Statistics for 3-dimensional colour spaces	128
6.3	The scatter ellipsoid.....	130
7	Tolerances for solid colours: DIN 6175 P1	133
8	Tolerances for gonioapparent colours: DIN 6175 P2	134
VII	Pigment optics – physical processes	
	<i>Uwe Hempelmann</i>	137
1	Colour-generating processes	137
2	Reflection, refraction, diffraction, interference.....	140
3	Mie theory	143
4	Kubelka-Munk function for opaque layers	149
5	Saunderson correction: how surfaces influence the outcome of reflectance measurements	151
6	Kubelka-Munk equation for transparent layers	156
7	Multi-flux theory	157
7.1	Criticism of the Kubelka-Munk model.....	157
7.2	Radiative transfer equation.....	159
VIII	Practical applications	
	<i>Uwe Hempelmann</i>	165
1	Tinting strength.....	165
2	Hiding power	171

IX	Measuring the texture of effect finishes	
	<i>Sandra Weixel</i>	172
1	Sparkle and graininess	172
1.1	Visual evaluation of sparkle and graininess.....	172
1.2	Instrumental measurement of sparkle and graininess.....	174
1.2.1	Sparkle measurement under direct illumination	174
1.2.2	Graininess measurement under diffuse illumination	175
2	Sparkle and graininess applications	175
2.1	Influence of flake size on sparkle and graininess	175
2.2	Influence of flake orientation on total colour impression.....	176
3	Conclusions	176
X	Characterisation of pigments	180
1	Inorganic pigments - characterisation	
	<i>Rainer Henning</i>	182
1.1	White (P.W. 6) and black (P.Bl. 7)	182
1.2	Important inorganic coloured pigments	182
1.2.1	Inorganic yellow and red pigments.....	183
1.2.2	Inorganic green and blue pigments	184
2	Organic pigments - characterisation	
	<i>Rainer Henning</i>	185
2.1	Red pigments.....	185
2.2	Orange pigments	189
2.3	Yellow pigments	190
2.5	Blue organic pigments	194
2.6	Violet organic pigments.....	195
3	Characterisation of aluminium pigments	
	<i>Hans-Jörg Kremitzl</i>	198
3.1	The metallic effect and its cause.....	198
3.1.1	Leafing and non-leafing properties	198
3.1.2	Particle-size and diameter.....	199
3.1.3	Particle shape, thickness, and topography.....	199
3.1.4	Orientation of pigments in the paint film	200
3.2	Comparison of various pigment grades	201
3.3	Chemical and mechanical properties	201
4	Characterisation of pearlescent pigments and special effect pigments	
	<i>Peter Gabel and Gerhard Pfaff</i>	202
4.1	Manufacture, properties and types of special effect pigments	203
4.1.1	Metal oxide mica pigments	204
4.1.1.1	Titanium dioxide mica pigments	206
4.1.1.2	Titanium dioxide mica pigments with multi-layers	209
4.1.1.3	Iron(III) oxide mica pigments.....	211
4.1.1.4	Combination pigments based on metal oxide and mica	212
4.1.2	Effect pigments based on alumina flakes.....	213
4.1.3	Metal oxide pigments based on borosilicate flakes	214

4.1.4	Metal oxide pigments based on silica flakes.....	216
4.1.5	Metal oxide pigments based on iron oxide flakes.....	217
4.1.6	Multi-layer pigments with a Fabry-Perot structure	218
4.1.7	Effect pigments based on liquid-crystal polymers (cholesteric effect pigments).....	219
4.1.8	Structured effect pigments	220

XI Recipe prediction

	<i>Uwe Hempelmann</i>	224
1	Recipe prediction for solid colours	224
2	Calibration of colourants.....	226
3	Computer-aided correction of colour recipes	228
4	Practical colour-recipe prediction of gonioapparent colours	231
4.1	Topology of effect pigments in surface coatings	235
4.2	The limitations of colour recipe prediction	236
5	The profitability of colour recipe calculation	237
5.1	Review.....	237
5.2	General savings potential afforded by colour recipe calculation.....	238
5.2.1	Swift feasibility analysis	238
5.2.2	Low-cost metamerism-free recipes	238
5.2.3	Accurate corrections in production.....	238
5.2.4	Fewer complaints	239
5.2.5	Computer algorithms for saving costs in specific applications.....	239
5.2.6	Profitability analysis - summary.....	242
6	Guidelines for formulating and matching object colours.....	242
6.1	Rules for mixing pigments.....	243
6.2	Solid colours	244
6.3	Gonioapparent colours	247
6.4	Hiding power and pigmentation level.....	249
7	Recipe dosability.....	250
8	Structure of colour mixing systems	251
8.1	Introduction	251
8.2	Alternative methods of paint production	251
8.2.1	Production of OEM paint material	251
8.2.2	Advantages of colour mixing systems.....	251
8.2.3	Paint mixing systems	252
8.2.4	Universal mixing systems	253
8.3	Coloristic demands on colour mixing systems.....	253
9	Optimisation of colour mixing systems	255
9.1	CIELAB colour maps of colour mixing systems	255
9.2	Colouring characteristics of pigments	256
10	Colour gamuts and the limits of colour matching.....	258

XII Microscopic analysis of effect pigments

	<i>Gerhard Wilker</i>	263
1	Matching of effect colour shades	263

1.1	Application of light microscopy.....	263
1.2	Accessories for the light microscope.....	264
2	Effect pigments.....	265
2.1	Overview.....	265
2.2	Aluminium flakes.....	266
2.3	Mica-based pearlescent pigments.....	267
2.4	Miscellaneous effect pigments.....	271
2.4.1	Effect pigments based on aluminium coated with iron oxide.....	271
2.4.2	Effect pigments based on aluminium oxide platelets.....	272
2.4.3	Effect pigments based on silicon dioxide platelets.....	273
2.4.4	Optimised pearlescent pigments with titanium dioxide coating.....	274
2.4.5	Multilayer pigments with Fabry-Perot structure (OVIP).....	274
2.4.6	Bismuth oxychloride.....	275
3	Application examples.....	276
3.1	Orientation of effect pigments in paint films.....	276
3.2	Mixtures of effect pigments.....	276
3.3	Tinted clearcoat.....	277
3.4	Effect paints in combination with light-scattering pigments.....	277
3.5	Use of polarised light.....	279
4	Systematic approach to colour-matching effect shades.....	279
4.1	Factors affecting the matching of effect shades.....	280
4.2	Colour-matching system and systematic approach.....	280
4.3	Preparation of calibration panels.....	280
4.4	Options and application of the colour-matching system.....	281
4.5	Colour-matching procedure.....	282
5	Some useful hints for colour-matching effect paints.....	284
