| <b>1 Literature Review</b>                                                                                  | <b>1</b>  |
| 1.1 Introduction to the ECAP process . . . . .                                                              | 1         |
| 1.2 ECAP processing routes . . . . .                                                                        | 2         |
| 1.3 Estimation of the strain in the ECAP process . . . . .                                                  | 5         |
| 1.4 Grain refinemet by the ECAP process . . . . .                                                           | 6         |
| 1.5 Texture development through the ECAP process . . . . .                                                  | 12        |
| 1.6 Factors that influence on the grain refinement . . . . .                                                | 13        |
| <b>2 General Aspects of Large Deformations</b>                                                              | <b>19</b> |
| 2.1 Kinematics of large deformations . . . . .                                                              | 19        |
| 2.2 Balance equations . . . . .                                                                             | 23        |
| 2.3 Single crystal material model . . . . .                                                                 | 23        |
| 2.3.1 Elastic law . . . . .                                                                                 | 24        |
| 2.3.2 Theory of plasticity based on isomorphisms . . . . .                                                  | 25        |
| 2.3.3 Flow rule . . . . .                                                                                   | 30        |
| 2.3.4 Hardening law . . . . .                                                                               | 31        |
| 2.3.5 Algorithm for rate-dependent crystal plasticity based on the isomorph-<br>ic elastic ranges . . . . . | 38        |
| <b>3 An Analytical Approach of Subgrain Formation by Arnold Krawietz</b>                                    | <b>41</b> |
| 3.1 Rigid-plastic behavior . . . . .                                                                        | 41        |
| 3.2 Plastic deformations in the shearing zone of ECAP . . . . .                                             | 43        |
| 3.3 Cubic face-centered crystals . . . . .                                                                  | 43        |
| 3.4 Determination of the active slip systems . . . . .                                                      | 46        |
| 3.5 Details of two processes . . . . .                                                                      | 49        |

|          |                                                                           |            |
