|------------------------------------------------------------------------------------------------------|------------|
| <b>Preface</b>                                                                                       | v          |
| <b>Introduction</b>                                                                                  | xi         |
| <b>1 Sophus Lie, a giant in mathematics . . . . .</b>                                                | <b>1</b>   |
| <i>Lizhen Ji</i>                                                                                     |            |
| <b>2 Felix Klein: his life and mathematics . . . . .</b>                                             | <b>27</b>  |
| <i>Lizhen Ji</i>                                                                                     |            |
| <b>3 Klein and the Erlangen Programme . . . . .</b>                                                  | <b>59</b>  |
| <i>Jeremy J. Gray</i>                                                                                |            |
| <b>4 Klein’s “Erlanger Programm”: do traces of it exist in physical theories? . . . . .</b>          | <b>77</b>  |
| <i>Hubert Goenner</i>                                                                                |            |
| <b>5 On Klein’s So-called Non-Euclidean geometry . . . . .</b>                                       | <b>91</b>  |
| <i>Norbert A’Campo, Athanase Papadopoulos</i>                                                        |            |
| <b>6 What are symmetries of PDEs and what are PDEs themselves? . . . . .</b>                         | <b>137</b> |
| <i>Alexandre Vinogradov</i>                                                                          |            |
| <b>7 Transformation groups in non-Riemannian geometry . . . . .</b>                                  | <b>191</b> |
| <i>Charles Frances</i>                                                                               |            |
| <b>8 Transitional geometry . . . . .</b>                                                             | <b>217</b> |
| <i>Norbert A’Campo, Athanase Papadopoulos</i>                                                        |            |
| <b>9 On the projective geometry of constant curvature spaces . . . . .</b>                           | <b>237</b> |
| <i>Athanase Papadopoulos, Sumio Yamada</i>                                                           |            |
| <b>10 The Erlangen program and discrete differential geometry . . . . .</b>                          | <b>247</b> |
| <i>Yuri B. Suris</i>                                                                                 |            |
| <b>11 Three-dimensional gravity – an application of Felix Klein’s ideas<br/>in physics . . . . .</b> | <b>283</b> |
| <i>Catherine Meusburger</i>                                                                          |            |
| <b>12 Invariances in physics and group theory . . . . .</b>                                          | <b>307</b> |
| <i>Jean-Bernard Zuber</i>                                                                            |            |
