I	Foundations of Computability	1
1	Defining Computability	3
1.1	Algorithmically Computable Functions	3
1.1.1	Algorithms in Mathematics	3
1.1.2	The Obstacle of Diagonalization and Partial Functions	4
1.1.3	The Quest for a Characterization	5
1.1.4	Turing's Breakthrough	5
1.2	** Turing Defines Effectively Calculable	6
1.3	** Turing's Thesis, Turing's Theorem, TT	7
1.4	** Turing Machines	7
1.4.1	Exercises on Turing Machines	9
1.5	** The Basic Results	10
1.5.1	Numbering Turing Programs P_e	10
1.5.2	Numbering Turing Computations	10
1.5.3	The Enumeration Theorem and Universal Machine	11
1.5.4	The Parameter Theorem or s - m - n Theorem	12
1.6	** Unsolvable Problems	13
1.6.1	Computably Enumerable Sets	13
1.6.2	Noncomputable C.E. Sets	13
1.6.3	The Index Set Theorem and Rice's Theorem	16
1.6.4	Computable Approximations to Computations	17
		vii

1.6.5	Exercises	18
1.7	* Computable Permutations and Isomorphisms	19
1.7.1	Myhill Isomorphism Theorem	20
1.7.2	Acceptable Numberings	21
1.7.3	Exercises	21
2	Computably Enumerable Sets	23
2.1	** Characterizations of C.E. Sets	23
2.1.1	The Σ_1^0 Normal Form for C.E. Sets	23
2.1.2	The Uniformization Theorem	25
2.1.3	The Listing Theorem for C.E. Sets	26
2.1.4	The C.E. and Computable Sets as Lattices	26
2.1.5	Exercises	27
2.2	* Recursion Theorem (Fixed Point Theorem)	28
2.2.1	Fixed Points in Mathematics	28
2.2.2	Operating on Indices	28
2.2.3	** A Direct Proof of the Recursion Theorem	29
2.2.4	A Diagonal Argument Which Fails	29
2.2.5	Informal Applications of the Recursion Theorem	31
2.2.6	Other Properties of the Recursion Theorem	31
2.2.7	Exercises	32
2.3	Indexing Finite and Computable Sets	33
2.3.1	Computable Sets and Δ_0 and Δ_1 Indices	33
2.3.2	Canonical Index y for Finite Set D_y and String σ_y	34
2.3.3	Acceptable Numberings of Partial Computable Functions	35
2.3.4	Exercises	37
2.4	* Complete Sets and Creative Sets	38
2.4.1	Productive Sets	38
2.4.2	** Creative Sets Are Complete	39
2.4.3	Exercises	40
2.5	** Elementary Lachlan Games	43
2.5.1	The Definition of a Lachlan Game	43
2.5.2	Playing Partial Computable (P.C.) Functions	44
2.5.3	Some Easy Examples of Lachlan Games	44
2.5.4	Practicing Lachlan Games	45
2.5.5	The Significance of Lachlan Games	45
2.5.6	Exercises on Lachlan Games	45
2.6	⊙ The Order of Enumeration of C.E. Sets	46
2.6.1	Uniform Sequences and Simultaneous Enumerations	46
2.6.2	Static and Dynamic Properties of C.E. Sets	47
2.6.3	Exercises	48
2.7	⊙ The Friedberg Splitting Theorem	49
2.7.1	The Priority Ordering of Requirements	49
2.7.2	Exercises	50

3	Turing Reducibility	51
3.1	The Concept of Relative Computability	51
3.1.1	Turing Suggests Oracle Machines (<i>o</i> -Machines)	51
3.1.2	Post Develops Relative Computability	51
3.2	** Turing Computability	52
3.2.1	An <i>o</i> -Machine Model for Relative Computability	52
3.2.2	Turing Computable Functionals Φ_e	53
3.3	* Oracle Graphs of Turing Functional Φ_e	54
3.3.1	The Prefix-Free Graph F_e of Functional Φ_e	54
3.3.2	The Oracle Graph G_e of Functional Φ_e	56
3.3.3	The Use Principle for Turing Functionals	57
3.3.4	Permitting Constructions	57
3.3.5	Lachlan Notation for Approximation by Stages	57
3.3.6	Standard Theorems Relativized to A	58
3.3.7	Exercises	59
3.4	* Turing Degrees and the Jump Operator	60
3.4.1	The Structure of the Turing Degrees	60
3.4.2	The Jump Theorem	61
3.4.3	Exercises	62
3.5	* Limit Computable Sets and Domination	63
3.5.1	Domination and Quantifiers ($\forall^\infty x$) and ($\exists^\infty x$)	64
3.5.2	Uniformly Computable Sequences	64
3.5.3	Limit Computable Sets	65
3.5.4	Exercises	66
3.6	** The Limit Lemma	66
3.6.1	The Modulus Lemma for C.E. Sets	68
3.6.2	The Ovals of Σ_1 and Δ_2 Degrees	69
3.6.3	Reaching With the Jump: Low and High Sets	69
3.6.4	Exercises	70
3.7	* Trees and the Low Basis Theorem	71
3.7.1	Notation for Trees	71
3.7.2	* The Low Basis Theorem for Π_1^0 Classes	71
3.7.3	Exercises	72
3.8	Bounded Reducibilities and n -C.E. Sets	73
3.8.1	A Matrix M_x for Bounded Reducibilities	73
3.8.2	Bounded Turing Reducibility	73
3.8.3	Truth-Table Reductions	74
3.8.4	Difference of C.E., n -c.e., and ω -c.e. Sets	75
3.8.5	Exercises	77
4	The Arithmetical Hierarchy	79
4.1	Levels in the Arithmetical Hierarchy	79
4.1.1	Quantifier Manipulation	80
4.1.2	Placing a Set in Σ_n or Π_n	82
4.1.3	Exercises	83

4.2	** Post's Theorem and the Hierarchy Theorem	83
4.2.1	Post's Theorem Relating Σ_n to $\emptyset^{(n)}$	84
4.2.2	Exercises	85
4.3	* Σ_n -Complete Sets and Π_n -Complete Sets	86
4.3.1	Classifying Σ_2 and Π_2 Sets: Fin, Inf, and Tot	86
4.3.2	Constructions with Movable Markers	87
4.3.3	Classifying Cof as Σ_3 -Complete	87
4.3.4	Classifying Rec as Σ_3 -Complete	88
4.3.5	Σ_3 -Representation Theorems	89
4.3.6	Exercises	91
4.4	Relativized Hierarchy: Low_n and High_n Sets	91
4.4.1	Relativized Post's Theorem	92
4.4.2	Low_n and High_n Sets	92
4.4.3	Common Jump Classes of Degrees	93
4.4.4	Syntactic Properties of High_n and Low_n Sets	93
4.4.5	Exercises	94
4.5	* Domination and Escaping Domination	94
4.5.1	Domination Properties	95
4.5.2	Martin's High Domination Theorem	96
4.5.3	Exercises	97
4.6	Characterizing Nonlow_2 Sets $A \leq_T \emptyset'$	98
4.6.1	Exercises	98
4.7	Domination, Escape, and Classes of Degrees	99
4.8	Uniform Enumerations of Functions and Sets	99
4.8.1	Limits of Functions	100
4.8.2	A -uniform Enumeration of the Computable Functions	100
4.9	$\emptyset$ Characterizing Low_2 Sets $A \leq_T \emptyset'$	102
4.9.1	Exercises	103
5	Classifying C.E. Sets	107
5.1	* Degrees of Computably Enumerable Sets	107
5.1.1	Post's Problem and Post's Program	107
5.1.2	Dynamic Turing Reductions on C.E. Sets	108
5.2	* Simple Sets and the Permitting Method	108
5.2.1	Post's Simple Set Construction	109
5.2.2	The Canonical Simple Set Construction	110
5.2.3	Domination and a Complete Simple Set	111
5.2.4	Simple Permitting and Simple Sets	111
5.2.5	Permitting as a Game	112
5.2.6	Exercises	113
5.3	* Hypersimple Sets and Dominating Functions	113
5.3.1	Weak and Strong Arrays of Finite Sets	113
5.3.2	Dominating Functions and Hyperimmune Sets	114
5.3.3	Degrees of Hypersimple Sets and Dekker's Theorem	115

5.3.4	Exercises	116
5.4	* The Arslanov Completeness Criterion	117
5.4.1	Effectively Simple Sets Are Complete	117
5.4.2	Arslanov's Completeness Criterion for C.E. Sets	118
5.4.3	Exercises	119
5.5	⊙ More General Permitting	122
5.5.1	Standard and General Permitting	122
5.5.2	Reverse Permitting	123
5.5.3	Building a Turing Functional $\Theta^C = A$	123
5.6	⊙ Hyperimmune-Free Degrees	124
5.6.1	Two Downward Closure Properties of Domination	124
5.6.2	Δ_2 Degrees Are Hyperimmune	125
5.6.3	Σ_2 Approximations and Domination	127
5.7	Historical Remarks and Research References	127
5.7.1	⊙ Δ_2 -Permitting	128
6	Oracle Constructions and Forcing	131
6.1	* Kleene-Post Finite Extensions	131
6.1.1	Exercises	133
6.2	Minimal Pairs and Avoiding Cones	134
6.2.1	Exercises	136
6.3	* Generic Sets	137
6.3.1	1-Generic Sets	137
6.3.2	Forcing the Jump	137
6.3.3	Doing Many Constructions at Once	138
6.3.4	Exercises	138
6.4	* Inverting the Jump	139
6.4.1	Exercises	141
6.5	Upper and Lower Bounds for Degrees	141
6.5.1	Exercises	144
7	The Finite Injury Method	147
7.1	A Solution to Post's Problem	147
7.1.1	The Intuition Behind Finite Injury	147
7.1.2	The Injury Set for Requirement N_e	148
7.2	* Low Simple Sets	149
7.2.1	The Requirements for a Low Simple Set A	149
7.2.2	A Computable $\widehat{g(e, s)}$ with $g(e) = \lim_s \widehat{g(e, s)} = A'(e)$	150
7.2.3	The Construction of a Low Simple Set A	150
7.2.4	The Verification of a Low Simple Set A	151
7.2.5	The Restraint Functions $r(e, s)$ as Walls	151
7.2.6	Exercises	152
7.3	* The Friedberg-Muchnik Theorem	152
7.3.1	Renumbering the Requirements	152

7.3.2	The Basic Module to Meet R_e for e Even	153
7.3.3	The Full Construction	153
7.3.4	The Verification	154
7.3.5	Exercises	154
7.4	* Preservation Strategy to Avoid Upper Cones	156
7.4.1	The Notation	156
7.4.2	The Basic Module for Requirement N_e	156
7.4.3	The Construction of A	158
7.4.4	The Verification	158
7.5	Sacks Splitting Theorem	158
7.6	Avoiding the Cone Above a Δ_2 Set $C >_T \mathbf{0}$	161
7.6.1	Exercises	161
II	Trees and Π_1^0 Classes	163
8	Open and Closed Classes	165
8.1	Open Classes in Cantor Space	165
8.2	Closed Classes in Cantor Space	166
8.3	The Compactness Theorem	168
8.4	Notation for Trees	168
8.5	Effective Compactness Theorem	169
8.6	Dense Open Subsets of Cantor Space	170
8.7	Exercises	171
9	Basis Theorems	175
9.1	Bases and Nonbases for Π_1^0 -Classes	175
9.2	Previous Basis Theorems for Π_1^0 -Classes	176
9.3	Nonbasis Theorems for Π_1^0 -Classes	176
9.4	The Super Low Basis Theorem (SLBT)	177
9.5	The Computably Dominated Basis Theorem	178
9.6	Low Antibasis Theorem	179
9.7	Proper Low $_n$ Basis Theorem	181
10	Peano Arithmetic and Π_1^0-Classes	183
10.1	Logical Background	183
10.2	Π_1^0 Classes and Completions of Theories	184
10.3	Equivalent Properties of PA Degrees	185
11	Randomness and Π_1^0-Classes	189
11.1	Martin-Löf Randomness	189
11.2	A Π_1^0 Class of ML-Randoms	190
11.3	Π_1^0 Classes and Measure	191
11.4	Randomness and Computable Domination	192

III	Minimal Degrees	195
12	Minimal Degrees Below $\emptyset''$	197
12.1	Function Trees and e -Splitting Strings	197
12.2	The e -Splitting Lemmas	199
12.3	The Splitting Procedure	200
12.4	The Basic Module for Minimality	201
12.5	A Minimal Degree Below a $\emptyset''$ -Oracle	201
12.6	Exercises	202
13	Minimal Degrees Below $\emptyset'$	203
13.1	The Sacks Minimal Degree $\mathbf{a} < \mathbf{0}'$	203
13.2	The Basic Module for One Requirement R_e	203
13.3	Putting the Strategies Together	204
13.4	A Subtle Point	205
13.5	Constructing A to Meet Requirements $\{R_e\}_{e \in \omega}$	205
13.6	A Limit Computable Minimal Degree	206
13.6.1	Meeting a Single Requirement R_e	207
13.7	A Minimal Degree Below a Nonzero C.E. Degree	207
IV	Games in Computability Theory	209
14	Banach-Mazur Games	211
14.1	Banach-Mazur Games and Baire Category	211
14.1.1	Meager and Comeager Sets	211
14.1.2	The Baire Category Theorem	212
14.1.3	Banach-Mazur Games	212
14.1.4	Exercises	213
14.2	The Finite Extension Paradigm	214
14.2.1	Finite Extension Games	215
14.2.2	Exercises	215
15	Gale-Stewart Games	217
15.1	Gale-Stewart Games and Open Games	217
15.1.1	Exercises	218
15.1.2	Remarks on the Axiom of Determinacy	219
16	More Lachlan Games	221
16.1	Increasingly Complicated Constructions	221
16.2	Lachlan Games in Computability Theory	222
16.2.1	Playing Turing Reductions	222
16.3	Some Easy Examples of Lachlan Games	223
16.3.1	Theorem 5.2.3: Post's Simple Set	223
16.3.2	Theorem 5.2.7: Permitting a Simple Set $A \leq_T C$	223

16.3.3 Theorem 7.4.1: A Simple Set $A \not\leq_T C$	223
16.3.4 Friedberg-Muchnik Theorem 7.3.1	224

V History of Computability 225

17 History of Computability 227

17.1 Hilbert's Programs	227
17.2 Gödel, Church, and Recursive Functions	228
17.2.1 The Concept of Recursion	229
17.2.2 The Primitive Recursive Functions	229
17.2.3 Nonprimitive Recursive Functions	231
17.2.4 Herbrand-Gödel Recursive Functions	232
17.2.5 Kleene's μ -Recursive Functions	233
17.2.6 Gödel Remained Unconvinced	234
17.3 Turing's Analysis	235
17.3.1 Turing's Discovery	235
17.3.2 Gödel Accepts Turing's Analysis	236
17.3.3 Turing's Thesis: Definition or Theorem	236
17.3.4 Turing's Demonstration of Turing's Thesis	237
17.4 Turing's Oracle Machine (<i>o</i> -Machine)	238
17.4.1 An Extraordinary but Almost Incidental Discovery	238
17.4.2 Turing's Use of Oracle Machines	239
17.4.3 Kleene's Definition of "General Recursive In"	240
17.5 Emil Post's Contributions	241
17.5.1 Post Production Systems	242
17.5.2 Post Considered the Complete Set K	242
17.5.3 Post Defined Relative Computability	243
17.5.4 Developing the Turing Jump	244
17.6 Finite Injury Priority Arguments	245
17.7 Computability and Recursion Terminology	245
17.7.1 Gödel Rejects Term "Recursive Function Theory"	246
17.7.2 Changing "Recursive" Back to "Inductive"	247
17.8 Additional References	247

References 251
