

Contents

1	Mathematics revision — 1
1.1	Basic notions of sets — 1
1.2	Basic concepts of combinatorics — 5
1.2.1	More about binomial coefficients — 6
1.2.2	Specific permutations and a generalization — 10
1.3	Some special functions — 13
1.4	Integration of bi-dimensional functions — 19
2	Introduction to probability — 26
2.1	Mathematical models — 26
2.2	Further examples of random experiments — 26
2.3	Assigning probabilities to events — 28
2.4	Basic notions of probability — 30
3	Finite sample spaces — 36
3.1	Equally likely outcomes — 36
3.2	Variants of a random experiment — 39
4	Conditional probability and independence — 44
4.1	Conditional probability — 44
4.2	Bayes' theorem — 47
4.3	Independent events — 48
5	One-dimensional random variables — 59
5.1	The concept of a random variable — 59
5.2	Discrete random variables — 60
5.3	The binomial distribution and extensions — 61
5.4	Continuous random variables — 64
5.5	Distribution function — 67
6	Functions of random variables — 73
6.1	Continuous random variables — 73
6.2	Discrete random variables — 79
7	Bi-dimensional random variables — 83
7.1	Discrete random variables — 83
7.2	Continuous random variables — 85
7.3	Marginal distributions and independent variables — 88
7.4	Conditional distributions and distribution functions — 91
7.5	Functions of a random variable — 94
8	Characteristics of random variables — 100
8.1	The expected value of a random variable — 100
8.2	Expectation of a function of a random variable — 102
8.3	Properties of the expected value — 104
8.4	The variance of a random variable — 106

8.5	Probability inequalities —	109
8.6	Covariance and correlation —	112
9	Discrete probability models —	119
9.1	The Poisson distribution —	119
9.2	The Poisson process —	121
9.3	The geometric distribution —	122
9.4	The Pascal distribution —	124
9.5	The hypergeometric distribution —	126
9.6	The multinomial distribution —	129
10	Continuous probability models —	133
10.1	The normal distribution —	133
10.2	The exponential distribution —	138
10.3	The gamma distribution —	139
10.4	The chi-square distribution —	141
10.5	The beta distribution —	142
10.6	The multivariate normal distribution —	144
11	Generating functions in probability —	151
11.1	The moment-generating function —	151
11.2	Generation of moments —	153
11.3	Reproductive properties —	156
11.4	The probability-generating function —	159
11.5	Generation of probabilities and factorial moments —	161
12	Sums of many random variables —	166
12.1	The Law of Large Numbers —	166
12.2	Normal approximation to the binomial distribution —	167
12.3	The central Limit Theorem —	170
13	Samples and sampling distributions —	175
13.1	Samples and statistics —	175
13.2	Order statistics —	177
13.3	Sampling in simulation and deterministic applications —	182
14	Estimation of parameters —	191
14.1	Criteria for estimators —	191
14.2	Maximum likelihood estimation —	195
14.3	Method of moments —	200
14.4	Linear regression —	204
14.5	Confidence intervals —	211
14.6	Student's t-distribution —	215
15	Hypothesis tests —	221
15.1	Basic concepts and tests —	221
15.2	OC- function, power function and p-value —	225
15.3	Tests for the mean of a normal distribution with unknown variance —	230

15.4	Tests for the variance of a normal distribution—	231
15.5	Comparing the means of two normal distributions—	232
15.6	Comparing the variances of two normal distributions—	236
15.7	Chi-square goodness-of-fit test—	237
15.8	Contingency table chi-square test—	240

Appendix— 246

Solutions to exercises—	246
Table of distributions—	272
Standard normal distribution—	275
Student's t-distribution—	276
Chi-square distribution—	278
