

1	Introduction	1
2	Phenomenological and theoretical predictions	5
2.1	Principles of dielectric spectroscopy.....	6
2.1.1	Relaxation in dielectric matter	6
2.2	Dielectric response of glass-forming liquids	8
2.2.1	The α -relaxation	9
2.2.2	Excess wing and slow β -process	11
2.2.3	The fast β -process	11
2.2.4	The boson peak.....	12
2.3	Hallmark features of glass-forming liquids.....	14
2.3.1	Non-Arrhenius behaviour.....	15
2.3.2	Non-exponential relaxation functions	16
2.3.3	Non-ergodicity	17
2.4	Models and theories	18
2.4.1	Explanations of the Johari-Goldstein (JG) β -relaxation	18
2.4.2	Minimal model	20
2.4.3	Coupling model.....	22
2.4.4	Extended coupling model.....	23
2.4.5	Mode coupling theory (MCT).....	24
2.4.6	Ionic conductivity: phenomenological approaches and models	30
3	Measurement techniques	33
3.1	Dielectric measurements	34
3.1.1	Low frequency techniques	36
3.1.2	Coaxial line techniques.....	38
3.1.3	Quasioptical method: submillimeter wave spectroscopy	40
3.1.4	Fourier transform infrared spectroscopy (FTIR)	43
3.2	Neutron scattering.....	44
3.2.1	The high-resolution time-of-flight spectrometer TOFTOF	45
3.3	Positron annihilation lifetime spectroscopy (PALS)	46
3.4	Overview on the methods: advantages and disadvantages	47
4	Results and discussion	49
4.1	Broadband dielectric spectra of glass-forming liquids	50
4.1.1	Salol and xylitol – discussion of a "Type A" and "Type B" system	50
4.1.2	The structural glass-former benzophenone	56
4.2	Glassy dynamics in mono-, di-, and tripropylene glycol.....	60
4.2.1	Broadband dielectric spectra	60
4.2.2	The α -relaxation	63
4.2.3	Secondary relaxations	65
4.2.4	The fast β -relaxation	68
4.2.5	The boson peak.....	77
4.2.6	Relaxational behaviour of the polymer PPG 4000	79

4.2.7	Comparison with other experimental methods	82
4.3	Influence of the ion content on slow and fast relaxation dynamics	92
4.3.1	The α -relaxation	92
4.3.2	Slow β -process and excess wing	103
4.3.3	High frequency response	105
4.3.4	Neutron scattering vs. dielectric spectroscopy	114
4.4	Relationship between fragility and the boson peak	119
5	Summary and conclusion	125
6	Appendices	129
6.1	S-parameter	130
6.2	From the correlation function to the structure factor	131
6.3	Behaviour of the correlation function $F(k, t)$	133
7	Bibliography	135
