
Contents

I	Balance Laws	1
	1.1 Formulation of the Balance Law	2
	1.2 Reduction to Field Equations	3
	1.3 Change of Coordinates and a Trace Theorem	7
	1.4 Systems of Balance Laws	12
	1.5 Companion Balance Laws	13
	1.6 Weak and Shock Fronts	15
	1.7 Survey of the Theory of <i>BV</i> Functions	17
	1.8 <i>BV</i> Solutions of Systems of Balance Laws	21
	1.9 Rapid Oscillations and the Stabilizing Effect of Companion Balance Laws	23
	1.10 Notes	23
II	Introduction to Continuum Physics	25
	2.1 Kinematics	25
	2.2 Balance Laws in Continuum Physics	28
	2.3 The Balance Laws of Continuum Thermomechanics	31
	2.4 Material Frame Indifference	35
	2.5 Thermoelasticity	36
	2.6 Thermoviscoelasticity	44
	2.7 Incompressibility	47
	2.8 Relaxation	48
	2.9 Notes	49
III	Hyperbolic Systems of Balance Laws	53
	3.1 Hyperbolicity	53
	3.2 Entropy-Entropy Flux Pairs	54
	3.3 Examples of Hyperbolic Systems of Balance Laws	56
	3.4 Notes	73

IV	The Cauchy Problem	77
4.1	The Cauchy Problem: Classical Solutions	77
4.2	Breakdown of Classical Solutions	80
4.3	The Cauchy Problem: Weak Solutions	82
4.4	Nonuniqueness of Weak Solutions	83
4.5	Entropy Admissibility Condition	84
4.6	The Vanishing Viscosity Approach	90
4.7	Initial-Boundary Value Problems	94
4.8	Euler Equations	97
4.9	Notes	107
V	Entropy and the Stability of Classical Solutions	111
5.1	Convex Entropy and the Existence of Classical Solutions	112
5.2	Relative Entropy and the Stability of Classical Solutions	122
5.3	Involutions and Contingent Entropies	125
5.4	Contingent Entropies and Polyconvexity	138
5.5	The Role of Damping and Relaxation	146
5.6	Initial-Boundary Value Problems	160
5.7	Notes	170
VI	The L^1 Theory for Scalar Conservation Laws	175
6.1	The Cauchy Problem: Perseverance and Demise of Classical Solutions	176
6.2	Admissible Weak Solutions and their Stability Properties	178
6.3	The Method of Vanishing Viscosity	183
6.4	Solutions as Trajectories of a Contraction Semigroup and the Large Time Behavior of Periodic Solutions	188
6.5	The Layering Method	195
6.6	Relaxation	199
6.7	A Kinetic Formulation	205
6.8	Fine Structure of L^∞ Solutions	212
6.9	Initial-Boundary Value Problems	215
6.10	The L^1 Theory for Systems of Conservation Laws	220
6.11	Notes	223
VII	Hyperbolic Systems of Balance Laws in One-Space Dimension	227
7.1	Balance Laws in One-Space Dimension	227
7.2	Hyperbolicity and Strict Hyperbolicity	235
7.3	Riemann Invariants	238
7.4	Entropy-Entropy Flux Pairs	243
7.5	Genuine Nonlinearity and Linear Degeneracy	245
7.6	Simple Waves	247
7.7	Explosion of Weak Fronts	252
7.8	Existence and Breakdown of Classical Solutions	253
7.9	Weak Solutions	257

7.10	Notes	258
VIII	Admissible Shocks	263
8.1	Strong Shocks, Weak Shocks, and Shocks of Moderate Strength	263
8.2	The Hugoniot Locus	266
8.3	The Lax Shock Admissibility Criterion; Compressive, Overcompressive and Undercompressive Shocks .	272
8.4	The Liu Shock Admissibility Criterion	278
8.5	The Entropy Shock Admissibility Criterion.....	280
8.6	Viscous Shock Profiles	285
8.7	Nonconservative Shocks	296
8.8	Notes	297
IX	Admissible Wave Fans and the Riemann Problem	303
9.1	Self-Similar Solutions and the Riemann Problem	303
9.2	Wave Fan Admissibility Criteria	307
9.3	Solution of the Riemann Problem via Wave Curves	309
9.4	Systems with Genuinely Nonlinear or Linearly Degenerate Characteristic Families	312
9.5	General Strictly Hyperbolic Systems	316
9.6	Failure of Existence or Uniqueness; Delta Shocks and Transitional Waves	320
9.7	The Entropy Rate Admissibility Criterion	323
9.8	Viscous Wave Fans	332
9.9	Interaction of Wave Fans	343
9.10	Breakdown of Weak Solutions	350
9.11	Notes	354
X	Generalized Characteristics	359
10.1	<i>BV</i> Solutions	359
10.2	Generalized Characteristics	360
10.3	Extremal Backward Characteristics	362
10.4	Notes	365
XI	Scalar Conservation Laws in One Space Dimension	367
11.1	Admissible <i>BV</i> Solutions and Generalized Characteristics	368
11.2	The Spreading of Rarefaction Waves	371
11.3	Regularity of Solutions	372
11.4	Divides, Invariants and the Lax Formula	377
11.5	Decay of Solutions Induced by Entropy Dissipation	380
11.6	Spreading of Characteristics and Development of <i>N</i> -Waves	383
11.7	Confinement of Characteristics and Formation of Saw-toothed Profiles	384
11.8	Comparison Theorems and L^1 Stability	386
11.9	Genuinely Nonlinear Scalar Balance Laws	395
11.10	Balance Laws with Linear Excitation	399

11.11	An Inhomogeneous Conservation Law	401
11.12	When Genuine Nonlinearity Fails	406
11.13	Entropy Production	418
11.14	Notes	422
XII	Genuinely Nonlinear Systems of Two Conservation Laws	427
12.1	Notation and Assumptions	427
12.2	Entropy-Entropy Flux Pairs and the Hodograph Transformation	429
12.3	Local Structure of Solutions	432
12.4	Propagation of Riemann Invariants Along Extremal Backward Characteristics	435
12.5	Bounds on Solutions	452
12.6	Spreading of Rarefaction Waves	464
12.7	Regularity of Solutions	469
12.8	Initial Data in L^1	471
12.9	Initial Data with Compact Support	475
12.10	Periodic Solutions	481
12.11	Notes	486
XIII	The Random Choice Method	489
13.1	The Construction Scheme	489
13.2	Compactness and Consistency	492
13.3	Wave Interactions in Genuinely Nonlinear Systems	498
13.4	The Glimm Functional for Genuinely Nonlinear Systems	500
13.5	Bounds on the Total Variation for Genuinely Nonlinear Systems	505
13.6	Bounds on the Supremum for Genuinely Nonlinear Systems ...	507
13.7	General Systems	509
13.8	Wave Tracing	512
13.9	Notes	515
XIV	The Front Tracking Method and Standard Riemann Semigroups ..	517
14.1	Front Tracking for Scalar Conservation Laws	518
14.2	Front Tracking for Genuinely Nonlinear Systems of Conservation Laws	520
14.3	The Global Wave Pattern	525
14.4	Approximate Solutions	526
14.5	Bounds on the Total Variation	528
14.6	Bounds on the Combined Strength of Pseudoshocks	531
14.7	Compactness and Consistency	534
14.8	Continuous Dependence on Initial Data	536
14.9	The Standard Riemann Semigroup	540
14.10	Uniqueness of Solutions	541
14.11	Continuous Glimm Functionals, Spreading of Rarefaction Waves, and Structure of Solutions	547

14.12	Stability of Strong Waves	550
14.13	Notes	552
XV	Construction of <i>BV</i> Solutions by the Vanishing Viscosity Method . .	557
15.1	The Main Result	557
15.2	Road Map to the Proof of Theorem 15.1.1	559
15.3	The Effects of Diffusion	561
15.4	Decomposition into Viscous Traveling Waves	564
15.5	Transversal Wave Interactions	568
15.6	Interaction of Waves of the Same Family	572
15.7	Energy Estimates	576
15.8	Stability Estimates	579
15.9	Notes	582
XVI	<i>BV</i> Solutions for Systems of Balance Laws	585
16.1	The Cauchy Problem	586
16.2	Strong Dissipation	589
16.3	Redistribution of Damping	593
16.4	Bounds on the Variation	595
16.5	L^1 Stability Via Entropy with Conical Singularity at the Origin .	606
16.6	L^1 Stability when the Source is Partially Dissipative	609
16.7	Notes	622
XVII	Compensated Compactness	623
17.1	The Young Measure	624
17.2	Compensated Compactness and the div-curl Lemma	625
17.3	Measure-Valued Solutions for Systems of Conservation Laws and Compensated Compactness	626
17.4	Scalar Conservation Laws	629
17.5	A Relaxation Scheme for Scalar Conservation Laws	631
17.6	Genuinely Nonlinear Systems of Two Conservation Laws	634
17.7	The System of Isentropic Elasticity	637
17.8	The System of Isentropic Gas Dynamics	642
17.9	Notes	648
XVIII	Steady and Self-similar Solutions in Multi-Space Dimensions	655
18.1	Self-Similar Solutions for Multidimensional Scalar Conservation Laws	655
18.2	Steady Planar Isentropic Gas Flow	658
18.3	Self-Similar Planar Irrotational Isentropic Gas Flow	663
18.4	Supersonic Isentropic Gas Flow Past a Ramp	667
18.5	Regular Shock Reflection on a Wall	672
18.6	Shock Collision with a Ramp	675
18.7	Isometric Immersions	678
18.8	Cavitation in Elastodynamics	682
18.9	Notes	686
