

Table of contents

Table of contents	i
Abstract.....	1
Deutsche Zusammenfassung	2
1 Introduction.....	3
1.1 Thesis Motivation	3
1.2 Detailed Thesis Structure.....	4
2 General Basics	5
2.1 Silicon as Base Material for Solar Cells	5
2.1.1 Silicon feedstock	6
2.1.2 Crystallization	8
2.2 Charge Carriers in Crystalline Silicon	14
2.2.1 Transport of charge carriers: mobility, conductivity, doping	15
2.2.2 Charge carrier lifetime	20
3 Characterization Techniques	29
3.1 Mobility	29
3.1.1 Hall measurements	29
3.1.2 Deduction from resistivity and net doping concentration.....	32
3.1.3 Determination of minority charge carrier mobility.....	33
3.2 Lifetime and Defect Characterization	34
3.2.1 Photoluminescence imaging.....	34
3.2.2 Harmonically modulated photoluminescence.....	38
3.2.3 Injection-dependent lifetime imaging.....	41
3.2.4 Metastable defect imaging.....	42
3.2.5 Inductively coupled plasma mass spectrometry	45
3.3 Prediction of Solar Cell Efficiency Potential	45
4 Modeling Charge Carrier Mobility in Crystalline Silicon	49
4.1 Theoretical and Historical Background	49
4.1.1 Theoretical mobility calculations	50
4.1.2 Analytical mobility expressions	52
4.1.3 Mobility in compensated silicon	64
4.2 Methods and Experimental Results.....	69
4.3 A Unified Mobility Model.....	74
4.3.1 Phonon scattering.....	75
4.3.2 Modeling mobility in compensated silicon.....	76
4.4 Conclusion and Discussion.....	90

5	Towards High Efficiency Multicrystalline Silicon Solar Cells.....	95
5.1	Historical Background	96
5.1.1	Impact of crucible and coating on impurities in multicrystalline silicon.....	96
5.1.2	Impact of <i>p</i> - or <i>n</i> -type doping on the electrical quality of multicrystalline silicon.....	99
5.2	Origin of Impurities in Multicrystalline Silicon.....	107
5.2.1	Materials and methods.....	108
5.2.2	Results.....	111
5.2.3	Conclusion.....	122
5.3	<i>n</i> -type Doping: Increasing the Efficiency Potential of Multicrystalline Silicon.....	123
5.3.1	Materials and methods.....	124
5.3.2	Results.....	127
5.3.3	Conclusion.....	140
5.4	Understanding the Limitations in Multicrystalline <i>n</i> -type Silicon	140
5.4.1	Experimental	142
5.4.2	Simulations.....	143
5.4.3	Limitations of minority carrier lifetime in mc <i>n</i> -type silicon.....	145
5.4.4	Conclusion and outlook.....	155
5.5	High Efficiency Multicrystalline <i>n</i> -type Silicon Solar Cells.....	158
5.5.1	Material and methods	159
5.5.2	Material quality of HPM-Si.....	163
5.5.3	High efficiency mc silicon solar cells.....	169
5.5.4	Conclusion.....	176
6	Extended Summary & Outlook.....	177
7	Detaillierte Zusammenfassung.....	185
8	Appendix.....	189
8.1	Mobility Data in Compensated Silicon	189
8.2	Derivation of $\beta_2(T)$ and Model Implementation.....	191
	Bibliography	195
	Nomenclature.....	217
	Publications and Awards	221
	Acknowledgements.....	227
