1	Introduction	1
<hr/>		
Part I: AI Tools and State-of-the-Art Accomplishments in Mind Games		
<hr/>		
2	Foundations of AI and CI in Games. Claude Shannon's Postulates	11
3	Basic AI Methods and Tools	15
3.1	Definitions and Notation	15
3.2	Game Tree Searching	16
3.2.1	Minimax Algorithm	17
3.2.2	Alpha-Beta Search	18
3.2.3	Heuristic Enhancements	20
3.2.4	SCOUT and Negascout (PVS)	27
3.2.5	MTD(f) and MTD-bi	29
3.3	Rollout Simulations and Selective Sampling	31
3.3.1	UCT Algorithm	36
4	State of the Art	41
4.1	..., Deep Blue, Fritz, Hydra, Rybka,	41
4.2	Chinook – A Perfectly Playing Checkers Machine	43
4.3	Logistello – The Othello World Champion	44
4.4	Maven and Quackle – The Top Level Machine Scrabble Players	45
4.5	Poker and Bridge – Slightly behind Humans	47
4.6	Go – The Grand Challenge	49

Part II: CI Methods in Mind Games. Towards Human-Like Playing

5	An Overview of Computational Intelligence Methods	53
5.1	Artificial Neural Networks	53
5.1.1	Multilayer Perceptron	54
5.1.2	Neural Networks and Games	57
5.2	Evolutionary Methods	58
5.2.1	Evolution Strategies	59
5.2.2	Evolutionary Methods and Games	60
5.3	Reinforcement Learning	63
5.3.1	Temporal Difference Algorithm	64
5.3.2	Q-Learning Algorithm	65
5.3.3	Temporal Difference Learning in Games	66
5.4	Summary	69
6	CI in Games – Selected Approaches	71
6.1	TD-Gammon and Neurogammon	71
6.2	Anaconda vel Blondie24	73
6.3	TD-Learning Systems	77
6.3.1	KnightCap	77
6.3.2	TDL-Chinook	79
6.3.3	TD-GAC	80
6.4	Neuro-evolutionary Approaches	82
6.4.1	Blondie24-Like Approach to Othello	82
6.4.2	Blondie25	84
6.4.3	Moriarty and Miikkulainen’s Othello Player	86

Part III: An Overview of Challenges and Open Problems

7	Evaluation Function Learning	93
8	Game Representation	99
8.1	Local, Neighborhood-Based Representations	100
8.2	Invariants-Based Representations	103
8.3	Incremental Learning	107
8.4	Double Dummy Bridge Problem	112

9	Efficient TD Training	121
9.1	External Opponents vs. Self-playing	122
9.1.1	Self-playing	122
9.1.2	Training with External Opponents	125
9.1.3	Human vs. Artificial Trainers	127
9.1.4	Exploration-vs.-Exploitation Dilemma	128
9.2	TD-Learning Strategies	131
9.2.1	Learning on All Games	131
9.2.2	Learning Exclusively on Lost or Drawn Games	131
9.2.3	Learning on “No Blunders”	132
9.2.4	Learning with Focus on Strong Opponents	132
9.2.5	Successive Elimination of Weaker Opponents	133
9.2.6	Random Opponent	134
9.3	TD-GAC Experiment	135
9.4	Lessons from TD-GAC Experiment	141
9.4.1	The Choice of Training Strategy	141
9.4.2	Selection of Training Opponents	142
9.4.3	Training and Testing with Random Opponent	143
9.4.4	Oscillations in the Learning Process	145
9.4.5	Tuning α and λ	147
9.5	TD-Learning vs. Evolution	147
10	Move Ranking and Search-Free Playing	155
10.1	Methods Relying on Historical Goodness of a Move	156
10.2	Pattern-Based Methods	156
10.3	Methods Using Predefined Game Features	157
10.4	Chess-Related Approaches	161
11	Modeling the Opponent and Handling the Uncertainty	169

Part IV: Grand Challenges

12	Intuition	183
12.1	Perception in Chess	186
12.2	CHREST/CHUMP Model	187
12.3	SYLPH: A Pattern-Based Learning System	188
12.4	COPYCAT-Like Model	190
12.5	Other Approaches	194
12.5.1	Focused Minimax Search	195
12.5.2	Linguistic Geometry and Pioneer Project	197
12.5.3	Emergent Intuitive Playing	199
12.5.4	Perception in Go	199
12.5.5	fMRI Scanning	201
12.6	Summary	203

13 Creativity and Knowledge Discovery	205
13.1 <i>Spontaneous</i> Knowledge Discovery	206
13.1.1 TD-Gammon	206
13.1.2 DDBP Neural Network Solver	207
13.1.3 Blondie	210
13.2 <i>Deliberate</i> Knowledge Discovery	210
13.2.1 Morph	211
13.2.2 Zenith	211
13.2.3 Discovering Playing Strategies in Othello	213
13.2.4 Analysis of Archive Game Records	213
13.3 Summary	214
14 Multi-game Playing	215
14.1 SAL	215
14.2 Hoyle	216
14.3 METAGAMER	218
14.4 Morph II	220
14.5 General Game Playing Competition	221
14.6 Transfer of Knowledge	226
14.7 Summary	228
15 Summary and Perspectives	231
References	235
