

Contents

1	Introduction	1
1.1	A Viability Approach	1
1.2	Introducing Other Specifications	3
1.3	Variational Approaches	4
1.4	Organization of the Book	8
2	Celerity Regulators on Networks	11
2.1	Traveling Takes Time	11
2.1.1	Time, Duration and Temporal Windows	12
2.1.2	Temporal Window Dependent Evolutions	14
2.2	Traveling Needs Space	16
2.3	Celerity Regulators for Advising Viable Velocities	18
2.3.1	The Double Nature of Traffic Networks	18
2.3.2	The Viability Approach	21
2.3.3	New Specifications: Advised Accelerations and Jerks	23
2.4	Reaching Unexpected Position in Two-Dimensional Networks	25
2.4.1	Reaching a Target at Alarm Signals	25
2.4.2	Reaching a Target and Stopping at Alarm Signals	28
2.4.3	Starting from Junctions	32
2.4.4	Application: Pursuer-Invader Dynamical Games	33
3	Traveling on the Network	35
3.1	One-Dimensional Traffic Illustrations	35
3.1.1	Celerity Regulators	36
3.1.2	Celerity Regulators for Piecewise Constant Speed Limits	37
3.1.3	The Geodesic Evolutions	40
3.1.4	Dynamic Acceleration Regulators	48

3.1.5	One-Dimensional Traffic Concepts	49
3.1.6	Eupalinian Evolutions	52
3.1.7	Collision Avoidance of Two Vehicles	54
3.2	Basic Traffic Viability Concepts and Results	57
3.2.1	Traffic Evolutionary Systems	58
3.2.2	Averagers of Evolutionary Systems	60
3.2.3	Cournot Maps and Reachable Maps.	63
3.2.4	Incoming and Outgoing Relations and Maps.	65
3.2.5	Summary of Traffics Concepts	68
3.3	Concatenation of Cournot Maps	69
3.4	Eupalinian Maps	71
3.4.1	Pass-Through Constraints	72
3.4.2	Junctions and Intermodal Traffic Systems.	73
3.4.3	Multijunction Maps	77
3.4.4	Multijunctions Generated by Circuits	79
3.5	Synaptic Networks of Ionic Networks	80
3.5.1	Neurons as Ionic Networks.	80
3.5.2	Networks of Neurons.	81
4	Viability Characterizations and Construction of Celerity	
	Regulators.	85
4.1	A Viability Survival Kit.	85
4.1.1	Viable Capture Basins	86
4.1.2	Tangents	87
4.1.3	The Viability Theorem.	90
4.2	Viability Characterizations of Averagers, Cournot and Eupalinian Maps	91
4.2.1	Viability Characterization of the Averagers.	91
4.2.2	The Lax-Hopf Formula	94
4.2.3	Viability Characterization of the Cournot and Reachable Maps	95
4.3	Construction of Celerity Regulators	102
4.4	Approximations of Cournot Maps and Viability Algorithms	106
4.4.1	Approximations by Piecewise Characteristic Set-Valued Maps.	106
4.4.2	Viability Algorithms	110
4.4.3	The Curse of Dimensionality	112
5	Traffic Specifications	115
5.1	Micro-Meso-Macro Cascade of Traffic Evolutionary Systems	116
5.2	Micro-Meso Specific Traffic Systems	118

5.3	Duration-Chaperoned Evolutions	122
5.3.1	Durations with Variable Fluidities	123
5.3.2	Examples of Duration Functions	124
5.3.3	Fluidity Dependent Celerity Regulators	125
5.4	Acceleration and Dynamic Celerity Regulators	126
5.5	Collision Avoidance of a Fleet of Vehicles	131
6	Valuation of Intertemporal Micro–Meso–Macro Systems	137
6.1	Intertemporal Selection Through Indicators	137
6.1.1	Numerical Relation	137
6.1.2	Intertemporal Optimization of Lagrangians	138
6.1.3	The Dynamic Optimization Principle	144
6.1.4	Intertemporal Celerity Regulators	146
6.2	Cournot Departure States	148
6.2.1	Selector of Cournot Departure States	148
6.2.2	Width Indicators of Cournot Departure Sets	150
7	Variational Analysis of Traffic Evolutions	155
7.1	Lax–Oleinik Factory for Constructing Celerity Regulators	156
7.1.1	Fenchel Transform of Extended Functions	156
7.1.2	The Rise of Hamiltonians and Hamilton–Jacobi–Bellman Equations	160
7.2	Accumulation of Vehicles in Cohorts	165
7.2.1	Examples of Cohorts	166
7.2.2	Accumulation Valuation	167
7.2.3	Accumulation Dependent Celerity Regulators	169
7.3	Dynamic Valuation Function	171
7.4	The Greenshields Legacy	177
7.4.1	Hamiltonians Instead of Lagrangians as Corner Stones	177
7.4.2	The Lighthill, Whitham, Richards Equation	181
7.4.3	The Hamilton–Jacobi–Moskowitz Partial Differential Equation	185
7.4.4	Position-Dependent Hamiltonian	187
7.5	A Panorama on Macroscopic Hamiltonian Models	191
7.5.1	General Background	192
7.5.2	The Hamiltonians of Generic Second Order Models	192
7.5.3	The Three-Dimension Representation of Traffic Flow	194
7.5.4	The Three Kinds of Hamiltonians	195
7.5.5	Numerical Schemes for the Hamiltonian Approach	198

8 Mathematical Appendixes 201

8.1 Set-Valued Maps 201

8.2 Relations 206

8.3 Kernels and Basins 208

8.3.1 Definitions 209

8.3.2 Viability of Intersections and Inverse Images 211

8.3.3 Stability Properties of Evolutionary Systems 213

8.4 The Barrier Property of Capture Basins 214

8.5 Temporal Selections 220

8.6 Differentiating Set-Valued Maps and Extended Functions 223

8.6.1 Differentiating at Any Price 223

8.6.2 Derivatives of Set-Valued Maps 225

8.6.3 Epiderivatives of Extended Function 226
