

Contents

Context-Free Ambiguity Detection Using Multi-stack Pushdown Automata. . .	1
Complementation of Branching Automata for Scattered and Countable Series-Parallel Posets	13
Cayley Automatic Groups and Numerical Characteristics of Turing Transducers	26
A Perfect Class of Context-Sensitive Timed Languages	38
Position Automaton Construction for Regular Expressions with Intersection . . .	51
A Language-Theoretical Approach to Descriptive Complexity.	64
k -Abelian Equivalence and Rationality.	77
Schützenberger Products in a Category	89
Outfix-Guided Insertion (Extended Abstract)	102
Both Ways Rational Functions	114
Aperiodic String Transducers	125
An Automata Characterisation for Multiple Context-Free Languages	138
Weighted Automata and Logics on Infinite Graphs	151

Degrees of Infinite Words, Polynomials and Atoms.	164
Ternary Square-Free Partial Words with Many Wildcards.	177
Alternating Demon Space Is Closed Under Complement and Other Simulations for Sublogarithmic Space	190
Weighted Symbolic Automata with Data Storage	203
On Families of Full Trios Containing Counter Machine Languages	216
Non-regular Maximal Prefix-Free Subsets of Regular Languages.	229
Operations on Unambiguous Finite Automata	243
The Trace Monoids in the Queue Monoid and in the Direct Product of Two Free Monoids	256
On Ordered RRWW-Automata	268
Bispecial Factors in the Brun S -Adic System	280
Compositions of Tree-to-Tree Statistical Machine Translation Models	293
On the Solvability Problem for Restricted Classes of Word Equations	306
Unambiguous Büchi Is Weak	319
One-Unknown Word Equations and Three-Unknown Constant-Free Word Equations	332
Avoidability of Formulas with Two Variables.	344

Deciding Equivalence of Linear Tree-to-Word Transducers in Polynomial Time.	355
On Finite and Polynomial Ambiguity of Weighted Tree Automata	368
An Extremal Series of Eulerian Synchronizing Automata	380
Monoid-Based Approach to the Inclusion Problem on Superdeterministic Pushdown Automata	393
Author Index	407
