

Contents

Chapter 1	Introduction	1
1.1	Motivation	4
1.1.1	The eRobotics Approach	4
1.1.2	Semantic World Models as Basis for Modern, Multi-Domain VR Simulation Systems	6
1.1.3	Applying Rendering Techniques to Support Simulation Tasks	7
1.2	Contribution	9
1.3	Scope of Thesis	11
Chapter 2	State of the Art	13
2.1	Acceleration Algorithms for Graphics Applications	13
2.1.1	The Rendering Pipeline	13
2.1.2	Rendering System APIs	16
2.1.3	Culling Techniques	18
2.1.4	State Sorting and Batching	19
2.2	Scene Descriptions and Management for Multi-Domain VR Simulation Systems	22
2.2.1	Scene Graphs	22
2.2.2	Semantic Graph Database Principles	25
2.2.3	Applying Semantic Scene Descriptions to Graphics Applications	28
2.3	Survey of Current Graphics and Simulation Frameworks	31
2.4	Discussion	34
Chapter 3	Concept and Realization of a Multi-Domain VR Simulation System	37
3.1	Requirements and Development Goals	38
3.2	Conceptual System Design	39
3.2.1	A Joint Database Model as Central Element	41
3.2.2	Micro-Kernel-Based Architecture	41
3.2.3	Enabling Data Monitoring and Communication	43
3.2.4	Import and Interpretation of Semantic Data	45

3.2.5	Optimizing Semantic Data for Rendering Purposes	48
3.3	3D Geometry Plugin Concept	49
3.3.1	Elements for Basic 3D Scene Descriptions	50
3.3.2	The Scene Manager	52
3.3.3	Extending the Rendering Functionalities	62
3.4	Integration into an Existing Simulation System	66
Chapter 4	Real-Time Rendering Approaches for Dynamic Outdoor	
	Environments	69
4.1	Simulating Light	69
4.1.1	High Dynamic Range Rendering (HDR)	70
4.1.2	Light Scattering	79
4.2	Dynamic Shadows	92
4.2.1	Shadowing of Direct Light	92
4.2.2	Shadowing of Indirect Light	96
4.3	Rendering of Vegetation	102
4.3.1	Trees	103
4.3.2	Grass and Shrubs	105
4.4	Weather Effects	117
4.4.1	Clouds	118
4.4.2	Rain Simulation	129
4.5	Discussion	140
Chapter 5	Simulation Aspects	141
5.1	Sensor Simulation	142
5.1.1	Digital Video Cameras	144
5.1.2	LiDAR Sensors	151
5.1.3	Time-of-Flight (ToF) Cameras	162
5.1.4	Simulating Further Sensor Categories	170
5.2	Flow Simulation and Data Visualization	172
5.2.1	Theoretical Background	173
5.2.2	Computational Fluid Dynamics (CFD)	175
5.2.3	Interactive Visualization Approaches for CFD Datasets	178
5.2.4	Integration	186
5.3	Discussion	188
Chapter 6	Applications	191
6.1	Industrial Robotics	191
6.2	The Virtual Forest	195
6.2.1	A 4D-GIS Simulation System	195
6.2.2	Virtual Training	205
6.2.3	Virtual Mobile Robotics Testbeds	208
6.3	Space Robotics	212
6.3.1	The Virtual ISS	212

6.3.2	Rendezvous and Docking Scenarios.....	215
6.3.3	Planetary Rover Simulator.....	215
6.4	Virtual 3D City Models	217
Chapter 7	Summary, Conclusion and Outlook	223
7.1	Summary and Conclusion	223
7.2	Future Work and Outlook.....	224
