Part I Introduction

1 A Quick Survey	3
References	13

Part II Physical Foundations

2 Treatment with Ray Optics	17
2.1 Waveguiding by Total Internal Reflection	17
2.2 Step Index Fiber	19
2.3 Modal Dispersion	23
2.4 Gradient Index Fibers	25
2.5 Mode Coupling	26
2.6 Shortcomings of the Ray-Optical Treatment	27
References	28
3 Treatment with Wave Optics	29
3.1 Maxwell's Equations	29
3.2 Wave Equation	31
3.3 Linear and Nonlinear Refractive Index	32
3.3.1 Linear Case	33
3.3.2 Nonlinear Case	34
3.4 Separation of Coordinates	35
3.5 Modes	38
3.6 Solutions for $m = 0$	42
3.7 Solutions for $m = 1$	44
3.8 Solutions for $m > 1$	45
3.9 Field Amplitude Distribution of the Modes	46
3.10 Numerical Example	47
3.11 Number of Modes	50

3.12	A Remark on Microwave Waveguides	50
3.13	Energy Transport	51
	References	53
4	Chromatic Dispersion	55
4.1	Material Dispersion	56
4.1.1	Treatment with Derivatives to Wavelength	58
4.1.2	Treatment with Derivatives to Frequency	60
4.2	Waveguide and Profile Dispersion	62
4.3	Normal, Anomalous, and Zero Dispersion	63
4.4	Impact of Dispersion	65
4.5	Optimized Dispersion: Alternative Refractive Index Profiles	68
4.5.1	Gradient Index Fibers	68
4.5.2	W Fibers	69
4.5.3	T Fibers	70
4.5.4	Quadruple-Clad Fibers	72
4.5.5	Dispersion-Shifted or Dispersion-Flattened?.....	73
4.6	Polarization Mode Dispersion	74
4.6.1	Quantifying Polarization Mode Dispersion	74
4.6.2	Avoiding Polarization Mode Dispersion.....	75
4.7	Microstructured Fibers	78
4.7.1	Holey Fibers	80
4.7.2	Photonic Crystal Fibers	83
4.7.3	New Possibilities	84
	References	85
5	Losses	87
5.1	Loss Mechanisms in Glass	87
5.2	Bend Loss	89
5.3	Other Losses	92
5.4	Ultimate Reach and Possible Alternative Constructions	93
5.4.1	Heavy Molecules	93
5.4.2	Hollow Core Fibers	95
5.4.3	Sapphire Fibers	96
5.4.4	Plastic Fibers	96
	References	97
 Part III Technical Conditions for Fiber Technology		
6	Manufacturing and Mechanical Properties	101
6.1	Glass as a Material	101
6.1.1	Historical Issues	101
6.1.2	Structure	103
6.1.3	How Glass Breaks	105

6.2	Manufacturing of Fibers	107
6.2.1	Making a Preform	107
6.2.2	Pulling Fibers from the Preform	111
6.3	Mechanical Properties of Fibers	113
6.3.1	Pristine Glass	113
6.3.2	Reduction of Structural Stability	115
	References	116
7	How to Measure Important Fiber Characteristics	117
7.1	Loss	117
7.2	Dispersion	119
7.3	Geometry of Amplitude Distribution	124
7.3.1	Near-Field Methods	124
7.3.2	Far-Field Methods	127
7.4	Cutoff Wavelength	129
7.5	Optical Time Domain Reflectometry (OTDR)	131
	References	132
8	Components for Fiber Technology	133
8.1	Cable Structure	133
8.2	Preparation of Fiber Ends	135
8.3	Connections	136
8.3.1	Nonpermanent Connections	136
8.3.2	Permanent Connections	139
8.4	Elements for Spectral Manipulation	141
8.4.1	Fabry–Perot Filters	141
8.4.2	Fiber–Bragg Structures	142
8.5	Elements for Polarization Manipulation	143
8.5.1	Polarization Adjusters	143
8.5.2	Polarizers	145
8.6	Direction-Dependent Devices	146
8.6.1	Isolators	146
8.6.2	Circulators	148
8.7	Couplers	149
8.7.1	Power Splitting/Combining Couplers	149
8.7.2	Wavelength-Dependent Couplers	152
8.8	Optical Amplifiers	153
8.8.1	Amplifiers Involving Active Fibers	154
8.8.2	Amplifiers Involving Semiconductor Devices	157
8.9	Light Sources	158
8.9.1	Light from Semiconductors	159
8.9.2	Luminescent Diodes	159
8.9.3	Laser Diodes	160
8.9.4	Fiber Lasers	164

8.10	Optical Receivers	165
8.10.1	Principle of pn and pin Photodiodes	165
8.10.2	Materials	167
8.10.3	Speed	168
8.10.4	Noise	168
8.10.5	Avalanche Diodes.....	169
	References.....	169

Part IV Nonlinear Phenomena in Fibers

9	Basics of Nonlinear Processes	173
9.1	Nonlinearity in Fibers vs. in Bulk	173
9.2	Kerr Nonlinearity	175
9.3	Nonlinear Wave Equation	176
9.3.1	Envelope Equation Without Dispersion	177
9.3.2	Introducing Dispersion by a Fourier Technique	179
9.3.3	The Canonical Wave Equation: NLSE.....	181
9.3.4	Discussion of Contributions to the Wave Equation	183
9.3.5	Dimensionless NLSE	186
9.4	Solutions of the NLSE	187
9.4.1	Modulational Instability	187
9.4.2	The Akhmediev Breather	188
9.4.3	The Fundamental Soliton	190
9.4.4	How to Excite the Fundamental Soliton	196
9.4.5	Collisions of Solitons	199
9.4.6	Higher-Order Solitons	200
9.4.7	Dark Solitons	203
9.5	Digression: Solitons in Other Fields of Physics	205
9.6	More $\chi^{(3)}$ Processes	209
9.7	Inelastic Scattering Processes.....	211
9.7.1	Stimulated Brillouin Scattering	212
9.7.2	Stimulated Raman Scattering	218
	References.....	221
10	A Survey of Nonlinear Processes	225
10.1	Normal Dispersion	225
10.1.1	Spectral Broadening	225
10.1.2	Pulse Compression	225
10.1.3	Chirped Amplification	228
10.1.4	Optical Wave Breaking	230
10.2	Anomalous Dispersion	232
10.2.1	Modulational Instability	232
10.2.2	Fundamental Solitons	233
10.2.3	Soliton Compression	234
10.2.4	The Soliton Laser and Additive Pulse Mode Locking	234
10.2.5	Pulse Interaction	236

10.2.6	Self-Frequency Shift.....	237
10.2.7	Long-Haul Data Transmission with Solitons.....	239
10.2.8	Supercontinuum Generation	240
	References.....	243

Part V Technological Applications of Optical Fibers

11	Applications in Telecommunications	247
11.1	Fundamentals of Radio Systems Engineering	247
11.1.1	Signals	247
11.1.2	Modulation	248
11.1.3	Sampling	252
11.1.4	Coding	255
11.1.5	Multiplexing in Time and Frequency: TDM and WDM	255
11.1.6	On and Off: RZ and NRZ	257
11.1.7	Noise	258
11.1.8	Transmission and Channel Capacity	261
11.2	Nonlinear Transmission	263
11.2.1	A Single Wavelength Channel	264
11.2.2	Several Wavelength Channels	267
11.2.3	Alternating Dispersion (“Dispersion Management”)	268
11.3	Technical Issues	273
11.3.1	Monitoring of Operations	273
11.3.2	Eye Diagrams	274
11.3.3	Filtering to Reduce Crosstalk	274
11.4	Telecommunication: A Growth Industry	277
11.4.1	Historical Development	277
11.4.2	Continued Growth, Approaching the Limit	281
11.4.3	Historical Development, Continued	288
11.4.4	Beyond the Single-Mode Fiber	291
11.4.5	What is Next?	294
	References.....	295
12	Fiber-Optic Sensors	299
12.1	Why Sensors? Why Fiber-Optic?.....	299
12.2	Local Measurements	301
12.2.1	Pressure Gauge	301
12.2.2	Hydrophone	302
12.2.3	Temperature Measurement	303
12.2.4	Dosimetry	305
12.3	Distributed Measurements	305
12.4	The Status Today	309
	References.....	309

Part VI Appendices

13	Decibel Units	313
13.1	Definition	313
13.2	Absolute Values	314
13.3	Possible Irritations	314
13.3.1	Amplitude Ratios	314
13.3.2	Example	315
13.3.3	Electrical and Optical dB Units	316
13.4	Beer's Attenuation and dB Units	316
14	Skin Effect	317
15	Bessel Functions	319
15.1	Terminology for the Various Functions	319
15.2	Relations Between These Functions	320
15.3	Recursion Formulae	320
15.4	Properties of J_m and K_m	320
15.5	Zeroes of J_0 , J_1 , and J_2	321
15.6	Graphs of the Most Frequently Used Functions	321
16	Optics with Gaussian Beams	323
16.1	Why Gaussian Beams?	323
16.2	Formulae for Gaussian Beams	324
16.2.1	Example	326
16.3	Gaussian Beams and Optical Fibers	326
	References	327
17	Relations for Secans Hyperbolicus	329
18	Autocorrelation Measurement	331
18.1	Measurement of Ultrashort Processes	331
18.1.1	Correlation	331
18.1.2	Autocorrelation	332
18.1.3	Autocorrelation Measurements	333
18.1.4	A Catalogue of Autocorrelation Shapes	335
	Reference	336
	Legal Note	337
	Glossary	339
	Index	347
