1	Introduction	1
	References	12
2	Schrödinger Theory from the ‘Newtonian’ Perspective of ‘Classical’ Fields Derived from Quantal Sources	15
2.1	Time-Dependent Schrödinger Theory	16
2.2	Definitions of Quantal Sources	17
2.2.1	Electron Density $\rho(\mathbf{r}t)$	18
2.2.2	Spinless Single-Particle Density Matrix $\gamma(\mathbf{R}\mathbf{r}'t)$	18
2.2.3	Pair-Correlation Density $g(\mathbf{r}\mathbf{r}'t)$, and Fermi-Coulomb Hole $\rho_{xc}(\mathbf{r}\mathbf{r}'t)$	19
2.2.4	Current Density $\mathbf{j}(\mathbf{r}t)$	21
2.3	Definitions of ‘Classical’ Fields	22
2.3.1	Electron-Interaction Field $\mathcal{E}_{ee}(\mathbf{r}t)$	22
2.3.2	Differential Density Field $\mathcal{D}(\mathbf{r}t)$	23
2.3.3	Kinetic Field $\mathcal{Z}(\mathbf{r}t)$	23
2.3.4	Current Density Field $\mathcal{J}(\mathbf{r}t)$	24
2.4	Energy Components in Terms of Quantal Sources and Fields	25
2.4.1	Electron-Interaction Potential Energy $E_{ee}(t)$	25
2.4.2	Kinetic Energy $T(t)$	26
2.4.3	External Potential Energy $E_{\text{ext}}(t)$	27
2.5	Schrödinger Theory and the ‘Quantal Newtonian’ Second Law	27
2.6	Integral Virial Theorem	29
2.7	The Quantum-Mechanical ‘Hydrodynamical’ Equations	31
2.8	The Internal Field of the Electrons and Ehrenfest’s Theorem	32
2.9	The Harmonic Potential Theorem	36

2.10	Time-Independent Schrödinger Theory: Ground and Bound Excited States	38
2.10.1	The ‘Quantal Newtonian’ First Law	38
2.10.2	Coalescence Constraints	40
2.10.3	Asymptotic Structure of Wavefunction and Density	42
2.11	Examples of the ‘Newtonian’ Perspective: The Ground and First Excited Singlet State of the Hooke’s Atom	44
2.11.1	The Hooke’s Atom.	44
2.11.2	Wavefunction, Orbital Function, and Density.	46
2.11.3	Fermi–Coulomb Hole Charge Distribution $\rho_{xc}(\mathbf{r}\mathbf{r}')$	51
2.11.4	Hartree, Pauli–Coulomb, and Electron–Interaction Fields $\mathcal{E}_H(\mathbf{r})$, $\mathcal{E}_{xc}(\mathbf{r})$, $\mathcal{E}_{ee}(\mathbf{r})$ and Energies E_H , E_{xc} , E_{ee}	53
2.11.5	Kinetic Field $\mathcal{Z}(\mathbf{r})$ and Kinetic Energy T	56
2.11.6	Differential Density Field $\mathcal{D}(\mathbf{r})$	57
2.11.7	Total Energy E and Ionization Potential I	57
2.11.8	Expectations of Other Single–Particle Operators.	59
2.12	Schrödinger Theory and Quantum Fluid Dynamics.	59
2.12.1	Single–Electron Case	60
2.12.2	Many–Electron Case.	61
	References	65
3	Quantal Density Functional Theory	67
3.1	Time-Dependent Quantal Density Functional Theory: Part I	71
3.1.1	Quantal Sources.	72
3.1.2	Fields	75
3.1.3	Total Energy and Components in Terms of Quantal Sources and Fields	78
3.1.4	The S System ‘Quantal Newtonian’ Second Law	81
3.1.5	Effective Field $\mathcal{F}^{\text{eff}}(\mathbf{r}t)$ and Electron–Interaction Potential Energy $v_{ee}(\mathbf{r}t)$	83
3.2	Sum Rules	86
3.2.1	Integral Virial Theorem.	86
3.2.2	Ehrenfest’s Theorem and the Zero Force Sum Rule	86
3.2.3	Torque Sum Rule.	87
3.3	Time-Dependent Quantal Density Functional Theory: Part II	89
3.4	Time-Independent Quantal Density Functional Theory	91
3.4.1	The Interacting System and the ‘Quantal Newtonian’ First Law	91
3.4.2	The S System and Its ‘Quantal Newtonian’ First Law	92
3.4.3	Quantal Sources.	93
3.4.4	Fields	94
3.4.5	Total Energy and Components.	94

3.4.6	Effective Field $\mathcal{F}^{\text{eff}}(\mathbf{r})$ and Electron–Interaction Potential Energy $v_{\text{ee}}(\mathbf{r})$	96
3.4.7	Sum Rules	97
3.4.8	Highest Occupied Eigenvalue ϵ_{m}	98
3.4.9	Proof that Nonuniqueness of Effective Potential Energy Is Solely Due to Correlation-Kinetic Effects	99
3.5	Application of Q-DFT to the Ground and First Excited Singlet State of the Hooke’s Atom	100
3.5.1	S System Wavefunction, Spin–Orbitals, and Density	101
3.5.2	Pair–Correlation Density; Fermi and Coulomb Hole Charge Distributions	102
3.5.3	Hartree, Pauli, and Coulomb Fields $\mathcal{E}_{\text{H}}(\mathbf{r})$, $\mathcal{E}_{\text{x}}(\mathbf{r})$, $\mathcal{E}_{\text{c}}(\mathbf{r})$ and Energies E_{H} , E_{x} , E_{c}	106
3.5.4	Hartree $W_{\text{H}}(\mathbf{r})$, Pauli $W_{\text{x}}(\mathbf{r})$, and Coulomb $W_{\text{c}}(\mathbf{r})$ Potential Energies	108
3.5.5	Correlation–Kinetic Field $\mathcal{Z}_{\text{t}}(\mathbf{r})$, Energy T_{c} , and Potential Energy $W_{\text{t}}(\mathbf{r})$	110
3.5.6	Total Energy and Ionization Potential	114
3.5.7	Endnote on the Multiplicity of Potentials	114
3.6	Quantal Density Functional Theory of Degenerate States	115
3.7	Application of Q-DFT to the Wigner High-Electron-Correlation Regime of Nonuniform Density Systems	116
3.8	Quantal Density Functional Theory of Hartree–Fock and Hartree Theories	118
3.8.1	Hartree–Fock Theory	119
3.8.2	The Slater–Bardeen Interpretation of Hartree–Fock Theory	122
3.8.3	Theorems in Hartree–Fock Theory	124
3.8.4	Q–DFT of Hartree–Fock Theory	124
3.8.5	Hartree Theory	127
3.8.6	Q–DFT of Hartree Theory	130
