

Volume 3 Contents

Preface for Volumes 1–3 *XV*

Introduction: Definitions of Catalysis *XXI*

Volume 1

- 1 From Catalysis to Lewis Base Catalysis with Highlights from 1806 to 1970 *1*
Edwin Vedejs

Section I Principles *31*

- 2 Principles, Definitions, Terminology, and Orbital Analysis of Lewis Base–Lewis Acid Interactions Leading to Catalysis *33*
Scott E. Denmark and Gregory L. Beutner
- 3 Thermodynamic Treatments of Lewis Basicity *55*
Jean-François Gal
- 4 Quantitative Treatments of Nucleophilicity and Carbon Lewis Basicity *85*
Sami Lakhdar

Section II Mechanism and Lewis Base Catalysis: Nucleophilicity Is Only Part of the Story *119*

- 5 Anhydride Activation by 4-Dialkylaminopyridines and Analogs ($n \rightarrow \pi^*$) *121*
Raman Tandon and Hendrik Zipse
- 6 Mechanistic Understanding of Proline Analogs and Related Protic Lewis Bases ($n \rightarrow \pi^*$) *145*
Alan Armstrong and Paul Dingwall

- 7 **Mechanistic Options for the Morita–Baylis–Hillman Reaction ($n \rightarrow \pi^*$)** 191
Marilia S. Santos, José Tiago M. Correia, Ana Paula L. Batista, Manoel T. Rodrigues Jr., Ataulpa A.C. Braga, Marcos N. Eberlin, and Fernando Coelho
- 8 **Mechanism of C–Si Bond Cleavage Using Lewis Bases ($n \rightarrow \sigma^*$)** 233
Hans J. Reich
- 9 **Bifunctional Lewis Base Catalysis with Dual Activation of X_3Si-Nu and $C=O$ ($n \rightarrow \sigma^*$)** 281
Jiping Fu, Shinji Fujimori, and Scott E. Denmark
- 10 **Bifunctional Lewis Base Catalysis with Dual Activation of $R-M$ and $C=O$ ($n \rightarrow \sigma^*$)** 339
Manabu Hatano and Kazuaki Ishihara
- 11 **The Corey–Bakshi–Shibata Reduction: Mechanistic and Synthetic Considerations – Bifunctional Lewis Base Catalysis with Dual Activation** 387
Christopher J. Helal, and Matthew P. Meyer

Volume 2

Section III Applications: Lewis Base Catalysis Involving an $n \rightarrow \pi^*$ Activation Step 457

- 12 **Chiral Lewis Base Activation of Acyl and Related Donors in Enantioselective Transformations ($n \rightarrow \pi^*$)** 459
James I. Murray, Zsófia Heckenast, and Alan C. Spivey
- 13 **Catalytic Generation of Ammonium Enolates and Related Tertiary Amine-Derived Intermediates: Applications, Mechanism, and Stereochemical Models ($n \rightarrow \pi^*$)** 527
Khoi N. Van, Louis C. Morrill, Andrew D. Smith, and Daniel Romo
- 14 **Morita–Baylis–Hillman, Vinylogous Morita–Baylis–Hillman, and Rauhut–Currier Reactions** 655
Allison M. Wensley, Nolan T. McDougal, and Scott E. Schaus
- 15 **Beyond the Morita–Baylis–Hilman Reaction ($n \rightarrow \pi^*$)** 715
Yi Chiao Fan and Ohyun Kwon
- 16 **Iminium Catalysis ($n \rightarrow \pi^*$)** 805
Aurélie Claraz, Juha H. Siitonen, and Petri M. Pihko
- 17 **Enamine-Mediated Catalysis ($n \rightarrow \pi^*$)** 857
John J. Murphy, Mattia Silvi, and Paolo Melchiorre

Volume 3

Section IVa Applications: Enhanced Nucleophilicity by Lewis Base Activation

 $(n \rightarrow \sigma^*, n \rightarrow n^*)$ 903

- 18 Si—C—X and Si—C—EWG as Carbanion Equivalents under Lewis Base Activation ($n \rightarrow \sigma^*$) 905**
Ping Fang, Chang-Hua Ding, and Xue-Long Hou
- 18.1 Introduction 905
- 18.2 Lewis Base-Induced Generation of Carbanion Equivalents with Si—C—EWG 906
- 18.2.1 Enolate Generation from Si—C—Acyl Species 906
- 18.2.1.1 Addition to C=O Using Enolates Generated from β -Ketosilanes 906
- 18.2.1.2 Alkylation of Enolates Generated from β -Ketosilanes 909
- 18.2.1.3 Michael Addition Using Enolates Generated from β -Ketosilanes 910
- 18.2.2 Enolate Generation from Si—C—Carboxyl 910
- 18.2.2.1 Addition to C=O Using Enolates Generated from α -Silylester 910
- 18.2.2.2 Alkylation of Enolates Generated from α -Silylester 913
- 18.2.2.3 Arylation of Enolates Generated from α -Silylester 913
- 18.2.3 Carbanion Generation from Si—C—CN 914
- 18.2.3.1 Addition to C=O Using Carbanions Generated from Si—C—CN 914
- 18.2.3.2 Addition to C=N Using Carbanions Generated from Si—C—CN 917
- 18.2.3.3 Arylation of Carbanions Generated from Si—C—CN 917
- 18.2.4 Carbanion Generation from Si—C—S(O)R or Si—C—SO₂R 918
- 18.2.4.1 Addition to C=O Using Carbanions Generated from Si—C—S(O)R or Si—C—SO₂R 918
- 18.2.4.2 Reactions with Epoxides Using Carbanions Generated from Si—C—S(O)R or Si—C—SO₂R 919
- 18.2.5 Carbanion Generation from Si—C—P(O)R₂ 920
- 18.2.5.1 Addition to C=O Using Carbanions Generated from Si—C—P(O)R₂ 920
- 18.2.5.2 Miscellaneous 921
- 18.3 CF₃SiMe₃ and Related Reagents; Lewis Base-Induced Transfer of “CF₃—” 921
- 18.3.1 Addition to C=O Using Carbanions Generated from CF₃SiMe₃ and Related Reagents 922
- 18.3.2 Addition to C=N Using Carbanions Generated from CF₃CSiMe₃ and Related Reagents 927
- 18.3.3 Michael Reactions Using Carbanions Generated from CF₃CSiMe₃ and Related Reagents 930
- 18.3.4 Arylation, Vinylation, and Alkylation of Carbanions Generated from CF₃SiMe₃ and Related Reagents 932
- 18.3.5 Miscellaneous 934
- 18.4 Potentially Catalytic Cases of Si—C—X Activation by Lewis Base; X = O, N, S, SMe₂(+), and Related Reagents 936
- 18.4.1 Carbanion Equivalent Generation from Si—C—O 936
- 18.4.1.1 Addition to C=O Using Carbanions Generated from Si—C—O 936
- 18.4.1.2 Michael Addition Using Carbanion Equivalents Generated from Si—C—O 937
- 18.4.1.3 1,3-Dipolar Cycloaddition with Carbonyl Ylides Generated from Si—C—O 937
- 18.4.1.4 Arylation of Carbanions Generated from Si—C—O 938
- 18.4.2 Carbanion Generation from Si—C—N 938

- 18.4.2.1 Addition to C=O Using Carbanions Generated from Si–C–N 938
- 18.4.2.2 1,3–Dipolar Cycloaddition with Azomethine Ylides Generated from Si–C–N 939
- 18.4.2.3 Rearrangement of Ammonium Ylides $R_3N(+)CH_2-$ Generated from Si–C–N 943
- 18.4.3 Carbanion Generation from Si–C–S 944
- 18.4.3.1 Addition to C=O Using Carbanions Generated from Si–C–S 944
- 18.4.3.2 Addition to C=N Using Carbanions Generated from Si–C–S 946
- 18.4.3.3 Alkylation of Carbanions Generated from Si–C–S 947
- 18.4.3.4 Michael Addition Using Carbanion Generated from Si–C–S 948
- 18.4.3.5 1,3–Dipolar Cycloaddition with Thiocarbonyl Ylides Generated from Si–C–S 949
- 18.4.3.6 Addition to C=O Using Sulfonium Ylides Generated from Si–C–S 950
- 18.4.3.7 [2,3]–Sigmatropic Rearrangement of Sulfonium Ylides Generated from Si–C–S 951
- 18.4.3.8 Elimination of Sulfonium Ylides Generated from Si–C–S 951
- 18.4.3.9 Dithiane Anion Relay Chemistry with Carbanions Generated from Si–C–S 954
- 18.5 Carbanion Generation from Selected Sn–C–X and Sn–C–EWG Analogs 956
- 18.5.1 Addition to C=O Using Carbanions Generated from Sn–C–X and Sn–C–EWG Analogs 957
- 18.5.2 Alkylation, Arylation, and Vinylation of Carbanions Generated from Sn–C–X 958
- 18.5.3 1,3–Dipolar Cycloaddition with Azomethine Ylides and 2-Azaallyl Anions Generated from Sn–C–X 958
- 18.5.4 Miscellaneous 960
- 18.6 Conclusion 960
- List of Abbreviations 961
- References 961
- 19 Activation of B–B and B–Si Bonds and Synthesis of Organoboron and Organosilicon Compounds through Lewis Base-Catalyzed Transformations ($n \rightarrow n^*$) 967**
Amir H. Hoveyda, Hao Wu, Suttipol Radomkit, Jeannette M. Garcia, Fredrik Haeflner, and Kang-sang Lee
- 19.1 Introduction 967
- 19.2 Lewis Base Activation of B–B Bonds and Catalytic C–B Bond Forming Processes 968
- 19.2.1 Initial Evidence Indicating the Possibility of B–B Bond Activation by a Lewis Base 968
- 19.2.2 NHC-Catalyzed Boryl Conjugate Additions 968
- 19.2.2.1 The Initial Hypothesis 968
- 19.2.2.2 C–B Bond Formation Promoted by Achiral NHCs 968
- 19.2.3 C–B Bond Formation with Chiral NHCs 974
- 19.2.3.1 Enantioselective Formation of Tertiary C–B Bonds 974
- 19.2.3.2 Enantioselective Formation of Quaternary C–B Bonds 977
- 19.2.3.3 Comparison of Enantioselective Boryl Conjugate Additions Promoted by NHCs and Cu-Based Complexes 978
- 19.2.4 Phosphine-Catalyzed Boryl Conjugate Additions 981
- 19.2.5 Phosphine-Catalyzed Boryl Additions to *N*-Tosylimines 983
- 19.2.6 Diboron Additions to Alkenes and Alkynes Promoted by an Alkoxide 985
- 19.2.7 Alkoxide-Promoted Conversion of Aryl Iodides to Organoboron Compounds 989
- 19.2.8 Alkoxide-Promoted Conversion of Tosylhydrazones to Organoboron Compounds 989
- 19.3 Lewis Base Activation of B–Si Bonds and Catalytic Silyl or Boryl Additions 991
- 19.3.1 NHC-Catalyzed Silyl Conjugate Additions 991

19.3.1.1	Previous Observations and the Initial Hypothesis	991
19.3.1.2	C–Si Bond Formation with Chiral NHCs	993
19.3.2	Alkoxide-Catalyzed Borosilyl Additions to Aryl Olefins	995
19.3.3	Fluoride-Promoted Borosilyl Additions to Boc-Imines	995
19.3.4	Alkoxide-Promoted Conversion of Aryl Bromides to Aryl–B (pin) Compounds	998
19.4	Mechanistic Aspects of NHC-Catalyzed Boryl and Silyl Conjugate Additions	999
19.4.1	X-Ray Crystallographic and Spectroscopic Studies	999
19.4.2	NHC Association with the B-Based Reagent and Factors That Facilitate It	1001
19.4.3	Stereochemical Models for the Enantioselectivity Levels and Trends	1001
19.5	Conclusions and Outlook	1002
	List of Abbreviations	1005
	Acknowledgments	1005
	References	1006

Section IVb Applications: Enhanced Electrophilicity and Dual Activation by Lewis Base Catalysis ($n \rightarrow \sigma^*$) 1011

20	Lewis Base-Catalyzed Reactions of SiX_3-Based Reagents with $\text{C}=\text{O}$, $\text{C}=\text{N}$ ($n \rightarrow \sigma^*$)	1013
	<i>Andrei V. Malkov and Pavel Kočovský</i>	
20.1	Introduction	1013
20.2	Allylation of $\text{C}=\text{O}$ Substrates: Diastereoselection and Mechanistic Aspects	1013
20.3	Chiral Catalysts for Enantioselective Allylation	1016
20.3.1	Phosphoramides, Phosphinioxides, and Related Compounds as Catalysts	1017
20.3.2	Aromatic and Aliphatic <i>N</i> -Oxides as Catalysts	1021
20.3.3	Sulfoxides and Amides as Catalysts; Allylation of Aliphatic Aldehydes	1025
20.4	Functionalized Allyltrichlorosilanes and Synthetic Applications of Allylation	1027
20.5	Allylation of $\text{C}=\text{N}$ Substrates	1030
20.5.1	Addition to $\text{C}=\text{N}$ Bond	1030
20.6	Propargylation and Allenylation of Aldehydes, Imines, and Hydrazones	1031
20.7	Conclusion and Outlook	1033
	List of Abbreviations	1033
	References	1034
21	Lewis Base-Catalyzed, Lewis Acid-Mediated Reactions ($n \rightarrow \sigma^*$)	1039
	<i>Sergio Rossi and Scott E. Denmark</i>	
21.1	Introduction	1039
21.2	Allylation Reactions	1041
21.3	Aldol Reactions	1044
21.3.1	Aldol Reactions Involving Enoxysilane Derivatives of Aldehydes, Ketones and Esters as Nucleophiles	1044
21.3.2	Spectroscopic and Mechanistic Investigations	1049
21.3.3	Aldol Additions with Other Nucleophiles	1054
21.3.4	Aldol Reactions Promoted by Phosphine Oxides	1057
21.4	Double-Aldol Additions	1064
21.5	Vinylogous Aldol Additions	1066

21.6	Passerini Reactions	1072
21.7	Outlook and Perspective	1074
	List of Abbreviations	1074
	References	1074
22	Lewis Bases as Catalysts in the Reduction of Imines and Ketones with Silanes ($n \rightarrow \sigma^*$)	1077
	<i>Pavel Kočovský and Andrei V. Malkov</i>	
22.1	Introduction: Activation of Silanes	1077
22.2	Reductive Amination of Aldehydes and Ketones with Trichlorosilane	1078
22.3	Enantioselective Reduction of Ketimines with Trichlorosilane	1083
22.3.1	Chiral Formamides as Catalysts for the Enantioselective Reduction of Ketimines	1083
22.3.2	Other Chiral Amides as Catalysts for the Enantioselective Reduction of Ketimines	1088
22.3.3	Sulfinamides and Phosphoramides as Catalysts for the Enantioselective Reduction of Ketimines	1091
22.3.4	(Pyridyl)oxazolines as Catalysts for the Enantioselective Reduction of Ketimines	1092
22.3.5	Computational Studies on the Enantioselective Reduction of Ketimines	1093
22.4	Enantioselective Reduction of Functionalized Ketimines with Trichlorosilane	1095
22.4.1	Lewis Base-Catalyzed Enantioselective Reduction of Vicinal Chloroimines	1095
22.4.2	Lewis Base-Catalyzed Enantioselective Reduction of α -Imino Esters	1096
22.4.3	Lewis Base-Catalyzed Enantioselective Reduction of Conjugated Enamines	1096
22.4.4	Enantioselective Reduction of Imines Utilizing Supported Lewis Base Catalysts	1103
22.5	Enantioselective Reduction of Ketimines with Trialkoxysilanes	1105
22.6	Enantioselective Reduction of Ketones with Trichlorosilane	1105
22.7	Selected Synthetic Applications of the Enantioselective Reduction of Imines with Trichlorosilane	1106
22.8	Conclusion	1108
	List of Abbreviations	1109
	References	1109
23	Reactions of Epoxides ($n \rightarrow \sigma^*$)	1113
	<i>Tyler W. Wilson and Scott E. Denmark</i>	
23.1	Introduction	1113
23.1.1	Lewis Acid-Catalyzed, Enantioselective Epoxide Opening	1113
23.1.2	Opening of Epoxides with Halogen Nucleophiles	1114
23.1.3	Lewis Base Catalysis Applied to Epoxide Openings	1115
23.1.3.1	Modes of Activation for Lewis Base-Catalyzed Epoxide Openings	1115
23.2	Opening of Epoxides Catalyzed by Achiral Lewis Bases	1116
23.2.1	Introduction	1116
23.2.2	Lewis Base-Catalyzed Epoxide Opening with Chlorotrimethylsilane (TMSCl)	1116
23.2.3	Lewis Base-Catalyzed Epoxide Opening with SiCl_4	1121
23.2.4	Lewis Base-Catalyzed Epoxide Openings with Organotin Halides	1122
23.3	Lewis Base-Catalyzed, Enantioselective Epoxide Opening	1122
23.3.1	Introduction	1122
23.3.2	Enantioselective Desymmetrization of meso-Epoxides	1123
23.3.2.1	Catalysis by Phosphoramidate Lewis Bases	1123

23.3.2.2	Catalysis by <i>N</i> -Oxide-Derived Lewis Bases	1123
23.3.2.3	Catalysis by Phosphine Oxide Lewis Bases	1128
23.3.2.4	Catalysis by Lewis Bases with Unconventional Ligand Structures	1130
23.3.3	Kinetic Resolution of Epoxides with Lewis Bases	1133
23.3.3.1	Phosphoramidate-Catalyzed Kinetic Resolution of Vinyl Epoxides	1134
23.4	Mechanistic Studies on Lewis Base-Catalyzed Epoxide Opening	1135
23.4.1	Introduction	1135
23.4.2	Mechanistic Studies on <i>N</i> -Oxide -Derived Lewis Bases	1136
23.4.2.1	Nonlinear Effects and Kinetic Studies	1136
23.4.2.2	Structure–Activity Relationship for <i>N</i> -Oxide Lewis Bases	1136
23.4.3	Mechanistic Studies on Phosphoramidate-Derived Lewis Base Catalysts	1137
23.4.3.1	Stoichiometry and Catalyst Loading Studies	1137
23.4.3.2	Kinetic Studies and Nonlinear Effects	1138
23.4.3.3	NMR Studies on Reaction of HMPA with SiCl ₄	1139
23.4.3.4	Alternative Catalytic Cycle and Dimeric Catalyst Survey	1140
23.5	Enantioselective Opening of Epoxides with Fluoride	1142
23.5.1	Introduction	1142
23.5.2	Fluorination of Epoxides Using Cooperative Lewis Acid/Lewis Base Catalysis	1142
23.5.3	Mechanistic Studies on Cooperative Catalysis in the Fluorination of Epoxides	1145
23.6	Summary	1148
	List of Abbreviations	1148
	References	1149

Section V Lewis Base-Catalyzed Generation of Electrophilic Intermediates 1153

24	Lewis Base Catalysis: A Platform for Enantioselective Addition to Alkenes Using Group 16 and 17 Lewis Acids ($n \rightarrow \sigma^*$)	1155
	<i>Dipannita Kalyani, David J.-P. Kornfilt, Matthew T. Burk, and Scott E. Denmark</i>	
24.1	Introduction	1155
24.2	Selenofunctionalization	1156
24.2.1	Selenofunctionalization Reactions of Alkenes	1156
24.2.2	Enantioselective Selenofunctionalization of Alkenes Using Chiral Selenides or Substrates	1157
24.2.2.1	Intermolecular Reactions Using Chiral, Nonracemic Selenium Electrophiles	1157
24.2.2.2	Intramolecular Reactions Using Chiral Selenium Electrophiles	1159
24.2.3	Mechanistic Considerations for Lewis Base-Catalyzed Selenofunctionalizations	1160
24.2.3.1	Establishment of Lewis Base Catalysis	1161
24.2.3.2	Configurational Stability of Enantioenriched Seleniranium Ions	1163
24.2.4	Catalytic, Enantioselective Selenofunctionalization	1166
24.3	Sulfenofunctionalization	1170
24.3.1	Sulfenofunctionalization Reactions of Alkenes	1170
24.3.2	Enantioselective Alkene Sulfenofunctionalizations: Use of Chiral Substrates or Stoichiometric Reagents	1171
24.3.2.1	Reactions Using Chiral Auxiliaries	1171
24.3.2.2	Reactions Using Chiral, Nonracemic Sulfonylating Reagents	1172

24.3.3	Mechanistic Considerations for Lewis Base-Catalyzed Enantioselective Sulfenofunctionalization of Alkenes	1173
24.3.3.1	Enantiospecificity of Thiiranium Ion Opening in the Presence of Nucleophiles	1175
24.3.3.2	Racemization of Thiiranium ions by Lewis Bases	1175
24.3.3.3	Studies to Probe the Racemization via Olefin-to-Olefin Transfer	1176
24.3.4	Catalytic Enantioselective Sulfenofunctionalizations	1177
24.3.4.1	Sulfenoetherification	1177
24.3.4.2	Mechanistic Studies on the Sulfenoetherification Reaction	1179
24.3.4.3	Sulfenocarbocyclization	1185
24.3.4.4	Sulfenoamination	1189
24.4	Halofunctionalization	1191
24.4.1	Historical Background and Development of Mechanistic Understanding	1191
24.4.2	Mechanistic Considerations for Enantioselective Halofunctionalization	1192
24.4.2.1	Studies Probing the Racemization of Haliranium Ions by Olefin-to-Olefin Transfer	1192
24.4.2.2	Strategies for Maintaining Catalyst–Haliranium Association	1193
24.4.3	Enantioselective Halofunctionalization	1195
24.4.3.1	Halocarbocyclization	1195
24.4.3.2	Halolactonization	1196
24.4.3.3	Haloaminocyclization	1201
24.4.3.4	Haloetherification	1202
24.4.3.5	Dichlorination of Alkenes	1206
24.5	Summary	1206
	List of Abbreviations	1207
	References	1208

Section VI Bifunctional (and Multifunctional) Catalysis 1213

25	Bifunctional and Synergistic Catalysis: Lewis Acid Catalysis and Lewis Base-Assisted Bond Polarization ($n \rightarrow \sigma^*$)	1215
	<i>Won-jin Chung and Scott E. Denmark</i>	
25.1	Introduction	1215
25.2	Bifunctional Catalysis	1217
25.2.1	Silylcyanation of Aldehydes	1217
25.2.2	Silylcyanation of Ketones	1221
25.2.3	The Strecker and Reissert Reactions	1224
25.2.4	Desymmetrization of <i>meso</i> - <i>N</i> -Acyl Aziridines	1229
25.2.5	Conjugate Addition of Cyanide to α,β -Unsaturated Carbonyl Compounds	1230
25.3	Synergistic Catalysis	1232
25.3.1	Silylcyanation of Carbonyl Compounds	1232
25.3.2	Mukaiyama-Type Reactions	1235
25.4	Bifunctional/Synergistic Catalysis with Fluoride Activation	1236
25.4.1	Hosomi–Sakurai Allylation	1237
25.4.2	Mukaiyama-Type Aldol Reactions	1245
25.5	Conclusion	1253
	List of Abbreviations	1253
	References	1254

26	Bifunctional Catalysis with Lewis Base and X-H Sites That Facilitate Proton Transfer or Hydrogen Bonding ($n \rightarrow \pi^*$)	1259
	<i>Curren T. Mbofana and Scott J. Miller</i>	
26.1	Introduction	1259
26.2	Group Transfer Reactions	1259
26.2.1	Acylation	1259
26.2.2	Phosphorylation	1262
26.2.3	Sulfonylation and Sulfinylation	1265
26.3	Addition Reactions to Electron-Deficient Alkenes	1269
26.3.1	Morita–Baylis–Hillman Reaction	1269
26.3.2	Rauhut–Currier Reaction	1271
26.3.3	Stetter/Umpolung Reactions	1276
26.4	Allenoate Reactions	1279
26.4.1	Allenoate Cycloaddition Reactions	1280
26.4.2	Allenoate Addition Reactions	1283
26.5	Summary	1286
	List of Abbreviations	1286
	References	1287

Section VII Carbenes: Lewis Base Catalysis Triggers Multiple Activation Pathways 1289

27	Catalysis with Stable Carbenes ($n \rightarrow \pi^*$)	1291
	<i>Darrin M. Flanigan, Nicholas A. White, Kevin M. Oberg, and Tomislav Rovis</i>	
27.1	Introduction	1291
27.2	<i>N</i> -Heterocyclic Carbenes as Lewis Base Catalysts: Structural and Electronic Considerations	1292
27.2.1	pK_a Measurements of <i>N</i> -Heterocyclic Carbenes	1293
27.2.2	Efforts toward Characterizing the Breslow Intermediate	1295
27.3	<i>N</i> -Heterocyclic Carbenes in Classical Lewis Base-Catalyzed Reactions	1297
27.3.1	The Benzoin Reaction	1297
27.3.1.1	Enantioselective Benzoin Reactions	1298
27.3.1.2	Cross-Benzoin Reactions	1299
27.3.2	The Stetter Reaction	1307
27.3.2.1	Intramolecular Stetter Reactions	1309
27.3.2.2	Intermolecular Stetter Reactions	1310
27.3.3	Hydroacylations of Unactivated Double Bonds	1312
27.3.4	Lewis and Brønsted Base Catalysis	1314
27.3.4.1	<i>trans</i> -Esterification and Amidation Reactions	1314
27.3.4.2	Mukaiyama Aldol and Reformatsky Reactions	1315
27.3.5	Catalysis via Initial Conjugate Addition	1316
27.3.5.1	Morita–Baylis–Hillman and Rauhut–Currier Reactions	1316
27.3.5.2	β -Functionalization of Acrylates	1318
27.4	<i>N</i> -Heterocyclic Carbenes in Nonclassical Lewis Base-Catalyzed Reactions	1320
27.4.1	α -Reducible Aldehydes as Substrates for Acylation Reactions	1320
27.4.1.1	Formation of Esters and Acids	1320

27.4.1.2	Aldehyde Oxidation Utilizing an External Oxidant	1324
27.4.2	β -Functionalization of Enals	1324
27.4.2.1	β -Protonation of Enals	1324
27.4.2.2	β -Addition to Electron-Deficient Electrophiles	1326
27.4.2.3	Oxidative Hydroxylation via Radical Cation Intermediates	1328
27.4.3	α -Functionalization of Enals	1330
27.4.3.1	Enantioselective α -Protonation	1330
27.4.3.2	Enantioselective α -Fluorination of Enals	1330
27.4.3.3	Aldol Reactions with Enol Azolium Intermediates	1330
27.4.4	Annulation Reactions	1331
27.4.4.1	Lactone and Lactam Formation via Homoenolate Equivalents	1332
27.4.4.2	Carbocycle Formation via Homoenolate Equivalents	1334
27.4.4.3	Lactone and Lactam Formation via Enol Azolium Intermediates	1335
27.4.4.4	Annulation Reactions of α,β -Unsaturated Acyl Azolium Intermediates	1337
27.4.4.5	Ketenes and Other Direct Enol Azolium Precursors	1338
27.5	Selected Examples of <i>N</i> -Heterocyclic Carbenes in Synthesis	1340
27.6	Summary	1343
	List of Abbreviations	1343
	References	1344
	Summation	1351
	Index	1355
