Part I Overview

1 Introduction	3
References	7

Part II A Review of Essentials

2 A Survey of Quantum Cosmology	13
2.1 Motivation and Justification	13
2.2 Hamiltonian Formulation of General Relativity	16
2.2.1 The ADM (or 3 + 1) Decomposition	16
2.2.2 Hamiltonian and Constraints	18
2.3 The ADM Hamiltonian	22
2.3.1 Reduction to Homogeneous Cosmologies	22
2.3.2 Momentum Constraint and Coordinate Conditions	25
2.4 ADM (Hamiltonian) Quantization	27
2.4.1 Bianchi I Models	27
2.4.2 Friedmann–Robertson–Walker (FRW) Universe	28
2.4.3 Bianchi IX Cosmologies	30
2.5 Superspace and the Dirac Quantization Method	31
2.6 Algebra of Constraints	34
2.7 Boundary Conditions	36
2.7.1 The No-Boundary Proposal	37
2.7.2 The Tunneling Proposal	39
2.8 Minisuperspace	40
2.8.1 The WKB Approximation	42
2.8.2 Minisuperspaces and Boundary Conditions	43
Problems	49
References	50

3	A Summary of Supersymmetry and Supergravity	55
3.1	Why SUSY?	56
3.2	SUSY Algebra and Transformations	59
3.2.1	SUSY Algebra	59
3.2.2	Supermultiplets	61
3.2.3	SUSY Transformations and the Wess–Zumino Model	62
3.3	Superspace and Superfields	65
3.3.1	Chiral Superfields	70
3.3.2	Vector Superfields	75
3.4	$N=1$ Supergravity	78
3.4.1	Noether Method	79
3.4.2	First versus Second Order Formalism	83
3.4.3	SUGRA and Theories of Gravitation with Torsion	85
3.5	$N=1$ Supergravity and Matter	88
	Problems	91
	References	92
4	Canonical Quantization of $N=1$ Supergravity	95
4.1	Hamiltonian Formulation	96
4.1.1	Decomposition with Metric and Torsion	97
4.1.2	Decomposition with Tetrad and Torsion	100
4.1.3	Algebra of Constraints	106
4.1.4	Two-Component Spinor Representation	110
4.2	Quantization of $N=1$ Supergravity	115
4.2.1	A Representation for the Fermionic Momenta	115
4.2.2	Algebra of (Quantum) Constraints	116
4.2.3	Including (Super)Matter. General Formalism	119
	Problems	123
	References	124

Part III Supersymmetric Quantum Cosmology

5	SQC $N=1$ SUGRA (Fermionic Differential Operator Representation)	129
5.1	FRW Models	130
5.1.1	FRW Minisuperspace Reduction Ansätze	131
5.1.2	FRW Quantum States for the Vacuum Case	136
5.1.3	SUSY (FRW) Quantum States with Cosmological Constant	139
5.1.4	Scalar Supermultiplets and Superpotential	140
5.1.5	Vector Supermultiplets	156
5.2	Bianchi (Class A) Models	163
5.2.1	Minisuperspace Reduction Method	163
5.2.2	Applying the Lorentz Constraint	164
5.2.3	Supersymmetric Vacuum Case	166

Problems	180
References	181
6 Cosmologies with (Hidden) $N = 2$ Supersymmetry	185
6.1 Minisuperspaces from General Relativity	185
6.1.1 $N=2$ Supersymmetric Cosmologies	189
6.1.2 Empty Matter Sector	193
6.1.3 Barotropic Fluid Matter	199
6.1.4 Complex Scalar Field	204
6.1.5 Gauge Fields	209
6.2 Superstring Scenarios and Duality Transformations	212
6.2.1 $N=2$ SUSY Bianchi Models from the Heterotic String	213
6.2.2 P-Brane Backgrounds	225
6.2.3 Induced Gravity Scenarios	230
6.2.4 Brans–Dicke Theory	234
Problems	244
References	245
 Part IV Points of Departure	
7 Obstacles and Results: From QC to SQC	251
7.1 Quantum Cosmology	251
7.2 Supergravity	253
7.3 Supersymmetric Quantum Cosmology	254
7.3.1 FRW Models	254
7.3.2 Spatial Anisotropy	255
References	256
8 Routes Beyond the Borders	259
References	260
A List of Symbols, Notation, and Useful Expressions	263
A.1 List of Symbols	263
A.2 Conventions and Notation	267
A.3 About Spinors	268
A.3.1 Spinor Representations of the Lorentz Group	268
A.3.2 Dirac and Majorana Spinors	274
A.4 Useful Expressions	277
A.4.1 Metric and Tetrad	279
A.4.2 Connections and Torsion	280
A.4.3 Covariant Derivatives	282
A.4.4 (Gravitational) Canonical Momenta	283
A.4.5 Curvature	283

A.4.6	Decomposition with Four-Component Spinors	285
A.4.7	Equations Used in Chap. 4 of Vol. II	286
