Contents

1 Introduction 1
1.1 Purpose of the Book 1
1.2 Macro- and Microscopic Maxwell Equations 4
1.3 Standard Derivation of Macroscopic Maxwell Equations 9
1.4 Hierarchy of EM Response Theories 11
1.5 "Problems" of the Conventional Maxwell Equations 12
1.6 Meaning of Macroscopic Averaging 16
References 18

2 New Form of Macroscopic Maxwell Equations 21
2.1 New Strategy for Derivation 21
2.2 Microscopic Nonlocal Response Theory 22
2.2.1 Precise Definition of "Matter, EM Field and Interaction" .. 23
2.2.2 Calculation of Microscopic Nonlocal Susceptibility 30
2.2.3 Fundamental Equations to Determine Microscopic Response 32
2.2.4 Characteristics of Microscopic Nonlocal Response Theory . 36
2.3 Long Wavelength Approximation (LWA) 40
2.4 New Macroscopic Susceptibility 43
2.5 Dispersion Equation 46
References 47

3 Discussions of the New Results 49
3.1 Rewriting of the New Constitutive Equation 49
3.2 Unified Susceptibility for T and L Source Fields 52
3.3 New and Conventional Dispersion Equations 55
3.4 Case of Chiral Symmetry: Comparison with DBF-eqs 56
3.5 Other Unconventional Theories 59
3.5.1 Single Susceptibility Theories 59
3.5.2 Use of LWA on a Different Stage 61
3.6 Validity Condition of LWA 62
3.7 Boundary Conditions for EM Fields 64
3.8 Some Examples of Application 69

Bibliografische Informationen
http://d-nb.info/1001251695

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

3.8.1 Dispersion Relation in Chiral and Non-chiral Cases 69
3.8.2 Transmission Window in Left-Handed Materials: A Test of New and Conventional Schemes 71
References 75

4 Further Considerations 77
4.1 Consequences to the Metamaterials Studies 77
4.1.1 Definition of Left-Handed Materials (LHM) 77
4.1.2 Use of (ϵ, μ) and Homogenization 80
4.1.3 "Microscopic", "Semi-macroscopic" and "Electric Circuit" Approaches 81
4.1.4 Nonlocal Response of Metamaterials 82
4.2 Spatial Dispersion in Macro- vs. Microscopic Schemes 85
4.3 Resonant Bragg Scattering from Inner-core Excitations 87
4.4 Renormalization of L Current Density into $\boldsymbol{E}^{(\mathrm{L})}$ 91
4.4.1 Use of $\boldsymbol{E}^{(\mathrm{L})}$ as External Field 91
4.4.2 Difference in the Criterion for LWA 93
4.5 Extension to Nonlinear Response 94
References 96

5 Mathematical Details and Additional Physics 97
5.1 Continuity Equation and Operator Forms of P and M in Particle Picture 97
5.2 Equations of Motion Obtained from Lagrangian L 100
5.2.1 Newton Equation for a Charged Particle Under Lorentz Force 100
5.2.2 Equations of Motion for ϕ and A 103
5.2.3 Generalized Momenta and Hamiltonian 105
5.3 Another Set of Lagrangian and Hamiltonian 107
5.4 Derivation of Constitutive Equation from Density Matrix 112
5.5 Rewriting the $\langle 0|\hat{N}(r)|0\rangle$ Term 116
5.6 Division of $\bar{Q}_{\mu\nu}$ into E2 and M1 Components 120
5.7 Problems of Longitudinal (L) field 121
5.7.1 T and L Character of Induced Field 121
5.7.2 Excitation by an External L Field 124
5.7.3 L and T Fields Produced by a Moving Charge 127
5.8 Dimension of the Susceptibilities in SI and cgs Gauss Units 129
References 131
