Mathematical symbols — IX

1 Number-theoretical dynamical systems — 1

- 1.1 Continued fractions and Diophantine approximation — 1
 - 1.1.1 Continued fractions — 1
 - 1.1.2 Elementary Diophantine approximation: Hurwitz's Theorem and badly approximable numbers — 7
- 1.2 Topological Dynamical Systems — 12
 - 1.2.1 The Gauss map — 15
 - 1.2.2 Symbolic dynamics — 16
 - 1.2.3 A return to the Gauss map — 19
 - 1.2.4 Elementary metrical Diophantine analysis — 21
 - 1.2.5 Markov partitions for interval maps — 26
- 1.3 The Farey map: definition and topological properties — 30
 - 1.3.1 The Farey map — 30
 - 1.3.2 Topological properties of the Farey map — 34
- 1.4 Two further examples — 40
 - 1.4.1 The α -Lüroth maps — 40
 - 1.4.2 The α -Farey maps — 44
 - 1.4.3 Topological properties of F_α — 48
 - 1.4.4 Expanding and expansive partitions — 51
 - 1.4.5 Metrical Diophantine-like results for the α -Lüroth expansion — 53
- 1.5 Notes and historical remarks — 58
 - 1.5.1 The Farey sequence — 58
 - 1.5.2 The classical Lüroth series — 59
- 1.6 Exercises — 61

2 Basic ergodic theory — 64

- 2.1 Invariant measures — 64
 - 2.1.1 Invariant measures for the Gauss and α -Lüroth system — 66
- 2.2 Recurrence and conservativity — 69
- 2.3 The transfer operator — 75
 - 2.3.1 Jacobians and the change of variable formula — 75
 - 2.3.2 Obtaining invariant measures via the transfer operator — 76
 - 2.3.3 The Ruelle operator — 79
 - 2.3.4 Invariant measures for F, F_α, G and L_α — 82
 - 2.3.5 Invariant measures via the jump transformation — 86

2.4	Ergodicity and exactness —	88
2.4.1	Ergodicity of the systems G and L_α —	92
2.4.2	Ergodic theorems for probability spaces and consequences for the Gauss and α -Lüroth systems —	96
2.4.3	Ergodic theorems for infinite measures —	103
2.4.4	Inducing —	105
2.4.5	Uniqueness of the invariant measures for F and F_α —	109
2.4.6	Proof of Hopf's Ratio Ergodic Theorem —	112
2.5	Exactness revisited —	115
2.6	Exercises —	120
3	Renewal theory and α-sum-level sets —	122
3.1	Sum-level sets —	122
3.2	Sum-level sets for the α -Lüroth expansion —	123
3.2.1	Classical renewal results —	124
3.2.2	Renewal theory applied to the α -sum-level sets —	132
3.3	Exercises —	135
4	Infinite ergodic theory —	137
4.1	The functional analytic perspective and the Chacon–Ornstein Ergodic Theorem —	137
4.2	Pointwise dual ergodicity —	147
4.3	ψ -mixing, Darling–Kac sets and pointwise dual ergodicity —	151
4.4	Exercises —	157
5	Applications of infinite ergodic theory —	159
5.1	Sum-level sets for the continued fraction expansion, first investigations —	159
5.2	ψ -mixing for the Gauss map and the Gauss problem —	161
5.3	Pointwise dual ergodicity for the Farey map —	167
5.4	Uniform and uniformly returning sets —	168
5.5	Finer asymptotics of Lebesgue measure of sum-level sets —	173
5.6	Uniform distribution of the even Stern–Brocot sequence —	177
5.7	Exercises —	181

Bibliography — 183

Index — 188
