Abstract	VII
Table of contents	IX
1 Introduction	1
1.1 Evolution of sustainable development in the public agenda: from policy to business.	1
1.2 Concept of sustainability.....	1
1.3 Sustainable use of water	3
1.3.1 Economic and social sustainability in water use	5
1.3.2 Environmental and economic sustainability in water use	6
2 State of knowledge and research gap	8
2.1 Sustainability assessment approaches in the automotive industry	8
2.1.1 Key criteria for the sustainability assessment in the automotive industry	8
2.1.2 Comparison of existing approaches	10
2.1.3 Evaluation of the existing approaches regarding key criteria	17
2.2 Lack of research	20
2.2.1 LCSA methods and industry applications.....	20
2.2.2 Regionalized methods and automotive industry applications.....	21
2.2.3 Comprehensive sustainability water assessment.....	22
2.3 Goal and objectives	23
2.3.1 Overall goal	23
2.3.2 Specific questions.....	24
2.3.3 Representation	24
3 Method development.....	26
3.1 Review of relevant existing sustainability assessment methods	26
3.1.1 Sustainability methodologies and indicators.....	26
3.1.2 Environmental dimension's methodologies.....	26
3.1.3 Social dimension's methodologies.....	33
3.1.4 Economic dimension's methodologies	38
3.1.5 Comprehensive LCSA approaches	44
3.2 Pre-study for the method development: analysis of water consumption of the whole vehicle BMW 3 series 320d	46
3.2.1 Goal	46
3.2.2 Functional unit, system boundaries and method	46
3.2.3 Data sources	46
3.2.4 Water inventory	47
3.2.5 Results	48
3.2.6 Discussion	49
3.2.7 Conclusions: necessity to focus on automobile components for the implementation of the methodology.....	50

3.3	Suggestion for a new assessment methodology	50
3.3.1	Goal	50
3.3.2	Scope definition.....	51
3.3.3	System boundaries, boundary definition and assumptions	53
3.3.4	Regionalization of water flows for supply chain processes	55
3.3.5	Specific analysis of energy-related data.....	57
3.3.6	Further development of sustainability indicators for this study.....	59
3.3.7	Methodology-application and scenarios	73
3.3.8	Representation of the results	74
3.4	Materials	75
4	Case studies: results and discussion	76
4.1	Cylinder head BMW 3 series 320d	76
4.1.1	Definition of function and functional unit	76
4.1.2	Inventory analysis	80
4.1.3	Environmental impact assessment	84
4.1.4	Social impact assessment	85
4.1.5	Economic impact assessment	86
4.1.6	Interpretation of the results	87
4.2	Instrument panel BMW 3 series 320d.....	94
4.2.1	Definition of function and functional unit	94
4.2.2	Inventory analysis	97
4.2.3	Environmental impact assessment	100
4.2.4	Social impact assessment	101
4.2.5	Economic impact assessment.....	101
4.2.6	Interpretation of the results	102
4.3	Engine hood BMW 3 series 320d	107
4.3.1	Definition of function and functional unit	107
4.3.2	Inventory analysis	111
4.3.3	Environmental impact assessment	114
4.3.4	Social impact assessment	115
4.3.5	Economic impact assessment.....	116
4.3.6	Interpretation of the results	117
4.4	Discussion	122
4.4.1	Distribution across the life cycle.....	122
4.4.2	Hotspots for automotive industry processes	123
5	Feasibility of the developed methodology	124
5.1	Life cycle perspective.....	124
5.2	Value choices	124
5.3	Midpoint impact approach	125
5.4	Completeness of scope.....	125
5.4.1	Sustainability dimensions.....	125
5.4.2	Key topics addressed.....	126

5.4.3	Geographical scale of the assessment (regionalization).....	127
6	Conclusions and future work	129
6.1	Conclusions	129
6.1.1	Conclusions for the methodology development for sustainability assessment of water use in the automotive industry	129
6.1.2	Conclusions for the application of the method by case studies	131
6.1.3	Conclusions for further development and transferability.....	131
6.2	Research needs and future work.....	131
7	Summary	133
	List of Figures	138
	List of Tables	141
	List of abbreviations	143
	Annex	145
	References.....	160
