Preface — VII

1	Engineering projects — 1
1.1	Process engineering activities — 1
1.2	Realization of a plant — 8
1.3	Cost estimation — 18
2	Thermodynamic models in process simulation — 25
2.1	Phase equilibria — 27
2.2	ϕ - ϕ -approach — 32
2.3	γ - ϕ -approach — 41
2.3.1	Activity coefficients — 41
2.3.2	Vapor pressure and liquid density — 48
2.3.3	Association — 53
2.4	Electrolytes — 55
2.5	Liquid-liquid equilibria — 58
2.6	Solid-liquid equilibria — 61
2.7	ϕ - ϕ -approach with g^E mixing rules — 63
2.8	Enthalpy calculations — 65
2.9	Model choice and data management — 68
2.10	Binary parameter estimation — 72
2.11	Model changes — 75
2.12	Transport properties — 75
3	Working on a process — 79
3.1	Flowsheet setup — 80
3.2	Heat integration options — 90
3.3	Batch processes — 97
3.4	Equipment design — 102
3.5	Troubleshooting — 103
4	Heat exchangers — 107
4.1	Something general — 107
4.2	Shell-and-tube heat exchangers — 109
4.3	Heat exchangers without phase change — 110
4.4	Condensers — 120
4.5	Evaporators — 122
4.6	Plate heat exchangers — 130
4.7	Double pipes — 132

4.8	Air coolers —	133
4.9	Fouling —	134
4.10	Vibrations —	136
5	Distillation and absorption —	139
5.1	Thermodynamics of distillation and absorption columns —	142
5.2	Packed columns —	144
5.3	Tray columns —	154
5.4	Comparison between packed and tray columns —	171
5.5	Distillation column control —	173
5.6	Constructive issues in column design —	179
5.7	Separation of azeotropic systems —	181
5.8	Rate-based approach —	184
5.9	Dividing wall columns —	186
5.10	Batch distillation —	188
6	Two liquid phases —	191
6.1	Liquid-liquid separators —	191
6.2	Extraction —	194
6.2.1	Mixer-settler arrangement —	197
6.2.2	Extraction columns —	198
6.2.3	Centrifugal extractors —	201
7	Alternative separation processes —	203
7.1	Membrane separations —	203
7.2	Adsorption —	210
7.3	Crystallization —	217
8	Fluid flow engines —	223
8.1	Pumps —	223
8.2	Compressors —	231
8.3	Jet pumps —	240
8.4	Vacuum generation —	242
9	Vessels and separators —	247
10	Chemical reactions —	255
10.1	Reaction basics —	255
10.2	Reactors —	262
11	Mechanical strength and material choice —	269

12	Piping and measurement — 275
12.1	Pressure drop calculation — 275
12.1.1	Single-phase flow-through pipes — 275
12.1.2	Pressure drops in special piping elements — 280
12.1.3	Pressure drop calculation for compressible fluids — 280
12.1.4	Two-phase pressure drop — 283
12.2	Pipe specification — 289
12.3	Valves — 291
12.3.1	Isolation valves — 291
12.3.2	Control valves — 293
12.4	Measurement devices — 295

13	Utilities and waste streams — 299
13.1	Steam and condensate — 299
13.2	Heat transfer oil — 306
13.3	Cooling media — 306
13.4	Exhaust air treatment — 308
13.4.1	Condensation — 311
13.4.2	Combustion — 313
13.4.3	Absorption — 319
13.4.4	Biological exhaust air treatment — 320
13.4.5	Exhaust air treatment with membranes — 321
13.4.6	Adsorption processes — 322
13.5	Waste water treatment — 323

14	Process safety — 327
14.1	HAZOP procedure — 330
14.2	Pressure relief — 336
14.2.1	Introduction — 336
14.2.2	Mass flow to be discharged — 340
14.2.3	Fire case — 342
14.2.4	Actuation cases — 347
14.2.5	Safety valve peculiarities — 353
14.2.6	Maximum relief amount — 358
14.3	Explosions — 366

Glossary — 373

List of Symbols — 379

Bibliography — 383

A Some numbers to remember — 393

B Pressure drop coefficients — 397

Index — 401
