Abstract	iii
Zusammenfassung	v
Publications	ix
1 Introduction	1
 I Theoretical Background, Algorithms and Validation	
2 Observables in Liquid Crystals	9
2.1 Temperature and Pressure	11
2.2 Ordering in Liquid Crystals	14
2.3 The Frank Elastic Constants	19
3 The <i>pe</i> Physics Engine	27
3.1 Equations of Motion for Rigid Bodies	28
3.2 Time Integration	29
3.3 Fast Frictional Dynamics	32
4 Langevin Dynamics	41
4.1 Langevin Equation	41
4.2 Implementation in the <i>pe</i> Framework	43
4.3 Free Brownian Motion of a Single Particle	44
5 Lattice Boltzmann Simulations with waLBerla	51
5.1 Macroscopic Description of Hydrodynamics	51
5.2 Mesoscopic Description of Hydrodynamics	60
5.3 The Lattice Boltzmann (LBM) Method	70
5.4 Friction Forces on Spherocylinders in a Fluid	80
	xi

CONTENTS

5.4.1	Boundary Effects on Friction Coefficients	81
5.4.2	Friction Coefficients and Particle Aspect Ratio	84
5.4.3	Conclusion	89
6	Lattice Boltzmann Simulations with Brownian Motion	91
6.1	Governing Equations of Fluctuating Hydrodynamics	92
6.2	Probability Distribution of the Particle Distribution Functions	92
6.3	The Moment Space	96
6.4	The Moment Space for Fluctuating Lattice Boltzmann	99
6.5	Chapman-Enskog Expansion of the Fluctuating LBM	103
6.6	Algorithmic Details	109
6.7	Amendments for Colloidal Particles	111
6.8	Free Brownian Motion with the Fluctuating LBM	114
6.8.1	Brownian Motion of Spheres	115
6.8.2	Brownian Motion of Hard Spherocylinders	119
6.8.3	Conclusion	127
II	Simulation Results	
7	Hard Spherocylinder Liquid Crystals in the Bulk	131
7.1	Model System	134
7.2	Evaluation of the Nematic Order Parameter	137
7.3	Evaluation of Pressure	139
7.4	Evaluation of the Frank Elastic Constants	139
7.5	Conclusion	143
8	Dynamical States in Driven Colloidal Liquid Crystals	145
8.1	Simulation Details	146
8.2	External Driving Potential	148
8.3	Single Particle Dynamics	149
8.3.1	Single Particle Dynamics in the Absence of Noise	149
8.3.2	Single Particle Dynamics Including Brownian Motion	152
8.4	Limiting Cases of the Many-Particle System	155
8.5	Dynamical States of the Multi-Particle System	158
8.5.1	High Density Regime	160
8.5.2	Low Density Regime	168
8.5.3	Non-Equilibrium State Diagram	171
8.6	Conclusion	173

9	Diffusion in Periodic External Potentials	175
9.1	Simulation Parameters	177
9.2	Diffusion According to Langevin Dynamics	181
9.2.1	Diffusion in a Static Potential	181
9.2.2	Dependence on Driving Frequency	201
9.3	Diffusion Including Long Range Hydrodynamic Interactions .	214
9.3.1	Diffusion in a Static Potential	215
9.3.2	Dependence on Driving Frequency	221
9.4	Conclusion	229
10	Conclusion	231
 Appendices		
A	Frank Elastic Constants	237
A.1	Coefficients of Deformation Energy	237
A.2	Free Energy of Deformation in Fourier Space	242
B	Chapman-Enskog Expansion of the Fluctuating LBM	245
C	Spherocylinders in External Fields	263
C.1	Torque in Angle Dependent Potentials	263
C.2	Induced Dipoles in Hard Spherocylinders	269
Acknowledgments		271
Bibliography		273
