

CONTENTS

CHAPTER 1 Some historical remarks on the use of gas discharge
in the field of image acquisition 1

References 12

CHAPTER 2 Short-gap discharge with resistive electrode 15

2.1 Stability of homogeneous stationary discharge 16

2.2 Some basic properties of gas discharge in the SGD device..... 26

2.2.1 Current–voltage characteristic 26

2.2.2 Discharge sustaining voltage at room and cryogenic temperatures ... 29

2.2.3 Gas discharge brightness 33

2.2.4 Statistics of gas breakdown 38

References 47

CHAPTER 3 Detector materials for the SGD IR image converter 51

3.1 Deep-level impurities in silicon 53

3.1.1 *p*-type semiconductors 53

3.1.2 *n*-type semiconductors 55

3.2 Responsivity and response time 56

3.3 Development of Si:Zn photodetectors 58

3.4 Development of Si:S and Si:Se photodetectors 63

References 74

CHAPTER 4 Models for the semiconductor–gas-discharge structure..... 79

4.1 Space charge effects 79

4.2 Stabilization of gas discharge by a resistive electrode 85

4.3 A local model for the gas-discharge device with a resistive electrode 89

4.4 A fluid model for the semiconductor–gas-discharge structure..... 94

References 104

CHAPTER 5 Characteristics of the semiconductor–gas-discharge	
IR image converter	107
5.1 Sensitivity	108
5.1.1 Sensitivity: recording images with photographic films	108
5.1.2 Sensitivity: recording converted images with a CCD camera	112
5.1.2.1 Temporal noise	112
5.1.2.2 Spatial noise	114
5.1.2.3 Detectivity and noise equivalent irradiance	117
5.2 Spatial resolution	121
5.2.1 Spatial resolution under stationary conditions	123
5.2.2 Spatial resolution for rapidly varying input	130
5.3 Conversion speed of the SGD imaging system	134
References	137
 CHAPTER 6 Engineering of semiconductor–gas-discharge IR imagers	139
6.1 Two types of optical coupling	139
6.2 Sensitivity characteristics	142
6.3 Results for the sensitivity	145
6.4 The design	148
References	154
 CHAPTER 7 Applications of the SGD IR image converter	157
7.1 Fast profiling of a Nd:YAG laser beam	157
7.2 Fast profiling of erbium laser beams	161
7.3 High-speed IR imaging of a laser welding process	163
7.4 High-speed IR imaging of pulsed-current heating of a metallic foil	165
References	166
