1	Introduction	1
1.1	Heat Transfer Processes Containing Periodic Oscillations	1
1.1.1	Oscillation Internal Structure of Convective Heat Transfer Processes	1
1.1.2	Problem of Correct Averaging the Heat Transfer Coefficients	3
1.2	Physical Examples	6
1.3	Numerical Modeling of Conjugate Convective-Conductive Heat Transfer	10
1.4	Mechanism of Hydrodynamic Oscillations in a Medium Flowing Over a Body	12
1.4.1	Van Driest Model	12
1.4.2	Periodic Model of the Reynolds Analogy	14
1.4.3	Model of Periodical Contacts	16
1.5	Hydrodynamic Heat Transfer Coefficient	18
1.6	Previous Investigations of Heat Transfer Processes with Periodic Intensity	20
1.7	Analytical Methods	21
	References	22
2	Construction of a General Solution of the Problem	25
2.1	Boundary Value Problem for the Heat Conduction Equation	25
2.2	Spatial and Temporal Types of Oscillations	28
2.3	Interrelation Between the Two Averaged Coefficients of Heat Transfer	30
2.3.1	First Form of the Notation of the Boundary Condition	31
2.3.2	Second Form of the Notation of the Boundary Condition	32

2.4	Dimensionless Parameters.	33
2.5	Factor of Conjugation. An Analysis of Limiting Variants.	34
	References.	35
3	Solution of Characteristic Problems.	37
3.1	Construction of the General Solution	37
3.2	Harmonic Law of Oscillations	39
3.3	Inverse Harmonic Law of Oscillations	46
3.4	Delta-Like Law of Oscillations.	53
3.5	Step Law of Oscillations.	55
3.6	Comparative Analysis of the Conjugation Effects (Smooth and Step Oscillations).	70
3.7	Particular Exact Solution	71
3.8	Asymptotic Solution for Thin Wall.	72
3.9	The Method of Separation of Variables	75
	References.	77
4	Efficiency Algorithm of Computation of the Factor of Conjugation.	79
4.1	Smooth Oscillations (Approximate Solutions).	79
4.1.1	Harmonic Law of Oscillations.	80
4.1.2	Inverse Harmonic Law of Oscillations.	81
4.2	Boundary Condition on a Heat Transfer Surface (Series Expansion in a Small Parameter)	82
4.3	Derivation of a Computational Algorithm.	84
4.4	Approximate Solution for Smooth Oscillations.	85
4.5	Phase Shift Between Oscillations	87
4.6	Method of Small Parameter	90
4.7	Arbitrary Law of Oscillations	92
4.8	Filtration Property of the Computational Algorithm	99
4.9	Generalized Parameter of the Thermal Effect	100
4.10	Advantages of the Computational Algorithm	100
	References.	101
5	Solution of Special Problems	103
5.1	Complex Case of Heating.	103
5.1.1	Linear Interrelation of Fluctuations	103
5.1.2	Heat Supply from an Ambien	104
5.1.3	Thermal Contact to Another Body.	107
5.2	Heat Transfer on the Surface of a Cylinder	111
5.3	Heat Transfer on the Surface of a Sphere.	112
5.4	Parameter of Thermal Effect (Different Geometrical Bodies)	113

5.5	Overall Averaged True Heat Transfer Coefficient	115
5.5.1	Overall Experimental Heat Transfer Coefficient.	115
5.5.2	Issues of the Heat Transfer Intensification	117
5.5.3	Bilateral Spatio-Temporal Periodicity of Heat Transfer	118
5.6	Step and Non-periodic Oscillations of the Heat Transfer Intensity	120
5.6.1	Asymmetric Step Oscillations	120
5.6.2	Semi-infinite Body.	121
5.6.3	Symmetric Step Function	124
5.6.4	Delta-Like Step Function.	124
5.6.5	Thin Wall ($q_0 = \text{const}$)	125
5.6.6	Splicing of the Asymptotical Solutions	126
5.6.7	Arbitrary Amplitude of Oscillations.	126
5.7	Non-periodic Oscillations	127
	References.	130
6	Practical Applications of the Theory	131
6.1	Model Experiment	131
6.2	Dropwise Condensation	132
6.3	Nucleate Boiling.	136
6.3.1	Theory of Nucleate Boiling of Labuntsov	136
6.3.2	Periodic Model of Nucleate Boiling	139
6.3.3	Summary	146
	References.	146
7	Wall's Thermal Effect on Hydrodynamic Flow Stability	149
7.1	Flow of a Liquid with Supercritical Parameters	149
7.2	Density Wave Instability Phenomena	151
7.2.1	Theoretical Analysis	151
7.2.2	Mathematical Description	152
7.2.3	Type of Instability	155
7.3	Scenario of Evolution of the Density Wave Instability.	156
7.4	Basic Equations of the Density Wave Instability	158
7.5	Computation of Wall's Thermal Effect.	159
7.6	Analytical Problem Solution.	160
7.6.1	Perturbations of the Lowest Frequency	160
7.6.2	Analytical Approximations	162
7.6.3	Advantages of the Model	163
7.7	Summary	166
	References.	167
8	Landau Instability at Liquid Film Evaporation	169
8.1	Landau Instability	169
8.2	Problem Statement	170
8.3	Consistency Conditions.	173

8.4	Analysis of Stability	174
8.5	Evaluation of Reynolds Number	178
8.6	Evaluating the Effect of Hydrodynamic Boundary Condition	179
8.7	Summary	181
	References.	182
9	Hyperbolic Heat Conduction Equation	183
9.1	Advanced Topics of Theory of Heat Conduction	183
9.2	Cattaneo-Vernotte Law	185
9.3	Mathematical Statement	187
9.4	Limiting Cases of the Hyperbolic Heat Conduction Problem	189
9.5	Pulse Heating of Surface	191
9.6	Algorithm of Computation of the Factor of Conjugation	194
9.7	Solving of the Telegraph Equation	196
9.8	Land-Mark Between the Fourier Law and the Cattaneo-Vernotte Law	198
9.9	Practical Applications of the Hyperbolic Type of Heat Transfer	199
	References.	200
