1	Introduction	1
1.1	Timetable	1
1.2	Nobel Prize Winners	10
1.3	General Information	11

Part I Fundamentals

2	Bonds	19
2.1	Introduction	19
2.2	Covalent Bonds	19
2.2.1	Electron-Pair Bond	19
2.2.2	sp^3 Bonds	19
2.2.3	sp^2 Bonds	23
2.3	Ionic Bonds	25
2.4	Mixed Bonds	27
2.5	Metallic Bonding	30
2.6	van-der-Waals Bonds	30
2.7	Hamilton Operator of the Solid	32
3	Crystals	35
3.1	Introduction	35
3.2	Crystal Structure	35
3.3	Lattice	36
3.3.1	Unit Cell	36
3.3.2	Point Group	37
3.3.3	Space Group	39
3.3.4	2D Bravais Lattices	40
3.3.5	3D Bravais Lattices	40
3.3.6	Polycrystalline Semiconductors	45
3.3.7	Amorphous Semiconductors	45
3.4	Important Crystal Structures	47
3.4.1	Rocksalt Structure	47
3.4.2	CsCl Structure	48
3.4.3	Diamond Structure	48

3.4.4	Zincblende Structure	49
3.4.5	Wurtzite Structure	50
3.4.6	Chalcopyrite Structure	51
3.4.7	Fluorite Structure	53
3.4.8	Delafossite Structure	54
3.4.9	Perovskite Structure	55
3.4.10	NiAs Structure	56
3.4.11	Further Structures	56
3.5	Polytypism	57
3.6	Reciprocal Lattice	57
3.6.1	Reciprocal Lattice Vectors	59
3.6.2	Miller Indices	60
3.6.3	Brillouin Zone	62
3.7	Alloys	63
3.7.1	Random Alloys	64
3.7.2	Phase Diagram	66
3.7.3	Virtual Crystal Approximation	68
3.7.4	Lattice Parameter	68
3.7.5	Ordering	69
4	Defects	73
4.1	Introduction	73
4.2	Point Defects	73
4.2.1	Point Defect Types	73
4.2.2	Thermodynamics	74
4.2.3	Diffusion	78
4.2.4	Dopant Distribution	80
4.2.5	Large Concentration Effects	84
4.3	Dislocations	87
4.3.1	Dislocation Types	88
4.3.2	Visualization of Dislocations by Etching	92
4.3.3	Impurity Hardening	94
4.4	Extended Defects	95
4.4.1	Micro-cracks	95
4.4.2	Stacking Faults	95
4.4.3	Grain Boundaries	97
4.4.4	Antiphase and Inversion Domains	99
4.5	Disorder	102
5	Mechanical Properties	103
5.1	Introduction	103
5.2	Lattice Vibrations	103
5.2.1	Monoatomic Linear Chain	103
5.2.2	Diatomic Linear Chain	106
5.2.3	Lattice Vibrations of a Three-Dimensional Crystal	110

5.2.4	Density of States	112
5.2.5	Phonons	114
5.2.6	Localized Vibrational Modes	114
5.2.7	Phonons in Alloys	116
5.2.8	Electric Field Created by Optical Phonons.....	119
5.3	Elasticity	122
5.3.1	Thermal Expansion	122
5.3.2	Stress–Strain Relation	122
5.3.3	Biaxial Strain	127
5.3.4	Three-Dimensional Strain	128
5.3.5	Substrate Bending	130
5.3.6	Scrolling	132
5.3.7	Critical Thickness	133
5.4	Cleaving.....	137
6	Band Structure	139
6.1	Introduction	139
6.2	Electrons in a Periodic Potential.....	139
6.2.1	Bloch’s Theorem	139
6.2.2	Free-Electron Dispersion	140
6.2.3	Kronig–Penney Model	142
6.2.4	Lattice Vector Expansion.....	144
6.2.5	Kramer’s degeneracy	147
6.3	Band Structure of Selected Semiconductors	147
6.3.1	Silicon	147
6.3.2	Germanium.....	147
6.3.3	GaAs	148
6.3.4	GaP	149
6.3.5	GaN	149
6.3.6	Lead Salts	149
6.3.7	Chalcopyrites	149
6.3.8	Delafossites	151
6.3.9	Perovskites	152
6.4	Alloy Semiconductors	153
6.5	Amorphous Semiconductors.....	155
6.6	Systematics of Semiconductor Band Gaps.....	156
6.7	Temperature Dependence of the Band Gap	158
6.8	Electron Dispersion	161
6.8.1	Equation of Electron Motion.....	161
6.8.2	Effective Mass of Electrons	161
6.8.3	Polaron Mass	165
6.8.4	Nonparabolicity of Electron Mass.....	167
6.9	Holes	168
6.9.1	Hole Concept	168
6.9.2	Hole Dispersion Relation	169
6.9.3	Valence-Band Fine Structure	173

6.10	Strain Effect on the Band Structure	176
6.10.1	Strain Effect on Band Edges	176
6.10.2	Strain Effect on Effective Masses	179
6.10.3	Interaction with a Localized Level	179
6.11	Density of States	179
6.11.1	General Band Structure	179
6.11.2	Free-Electron Gas	180
7	Electronic Defect States	185
7.1	Introduction	185
7.2	Fermi Distribution	185
7.3	Carrier Concentration	187
7.4	Intrinsic Conduction	190
7.5	Shallow Defects	193
7.5.1	Donors	193
7.5.2	Acceptors	202
7.5.3	Compensation	206
7.5.4	Multiple Impurities	208
7.5.5	Amphoteric Impurities	210
7.5.6	High Doping	211
7.6	Quasi-Fermi Levels	215
7.7	Deep Levels	216
7.7.1	Charge States	217
7.7.2	Double Donors	218
7.7.3	Double Acceptors	219
7.7.4	Jahn–Teller Effect	221
7.7.5	Negative- U Center	221
7.7.6	DX Center	224
7.7.7	EL2 Defect	226
7.7.8	Semi-insulating Semiconductors	227
7.7.9	Isoelectronic Impurities	228
7.7.10	Surface States	230
7.8	Hydrogen in Semiconductors	231
8	Transport	235
8.1	Introduction	235
8.2	Conductivity	236
8.3	Low-Field Transport	238
8.3.1	Mobility	238
8.3.2	Microscopic Scattering Processes	239
8.3.3	Ionized Impurity Scattering	239
8.3.4	Deformation Potential Scattering	240
8.3.5	Piezoelectric Potential Scattering	241
8.3.6	Polar Optical Scattering	241
8.3.7	Dislocation Scattering	241

8.3.8	Grain Boundary Scattering	242
8.3.9	Temperature Dependence	243
8.3.10	Doping Dependence	243
8.3.11	Piezoresistivity	246
8.4	Hall Effect	247
8.5	High-Field Transport	251
8.5.1	Drift-Saturation Velocity	251
8.5.2	Negative Differential Resistivity	252
8.5.3	Velocity Overshoot	254
8.5.4	Impact Ionization	254
8.6	High-Frequency Transport	257
8.7	Diffusion	257
8.8	Continuity Equation	259
8.9	Heat Conduction	259
8.10	Coupled Heat and Charge Transport	261
8.10.1	Seebeck Effect	261
8.10.2	Peltier Effect	262
9	Optical Properties	265
9.1	Spectral Regions and Overview	265
9.2	Reflection and Diffraction	266
9.3	Absorption	268
9.4	Electron-Photon Interaction	269
9.5	Band-Band Transitions	271
9.5.1	Joint Density of States	271
9.5.2	Direct Transitions	272
9.5.3	Indirect Transitions	274
9.5.4	Urbach Tail	278
9.5.5	Intravalence-Band Absorption	278
9.5.6	Amorphous Semiconductors	279
9.5.7	Excitons	280
9.5.8	Phonon Broadening	283
9.5.9	Exciton Polariton	285
9.5.10	Bound-Exciton Absorption	288
9.5.11	Biexcitons	290
9.5.12	Trions	290
9.5.13	Burstein-Moss Shift	291
9.5.14	Band Gap Renormalization	292
9.5.15	Electron-Hole Droplets	293
9.5.16	Two-Photon Absorption	294
9.6	Impurity Absorption	296
9.7	Free-Carrier Absorption	299
9.8	Lattice Absorption	303
9.8.1	Dielectric Constant	304
9.8.2	Reststrahlenbande	304

9.8.3	Polaritons	304
9.8.4	Phonon-Plasmon Coupling	307
10	Recombination	309
10.1	Introduction	309
10.2	Band-Band Recombination	309
10.2.1	Spontaneous Emission	309
10.2.2	Absorption	311
10.2.3	Stimulated Emission	311
10.2.4	Net Recombination Rate	312
10.2.5	Recombination Dynamics	313
10.2.6	Lasing	314
10.3	Exciton Recombination	315
10.3.1	Free Excitons	315
10.3.2	Bound Excitons	317
10.3.3	Alloy Broadening	323
10.4	Phonon Replica	326
10.5	Self-absorption	330
10.6	Donor-Acceptor Pair Transitions	331
10.7	Inner-Impurity Recombination	331
10.8	Auger Recombination	333
10.9	Band-Impurity Recombination	335
10.9.1	Shockley-Read-Hall Kinetics	335
10.9.2	Multilevel Traps	339
10.10	Field Effect	339
10.10.1	Thermally Activated Emission	339
10.10.2	Direct Tunneling	340
10.10.3	Assisted Tunneling	340
10.11	Recombination at Extended Defects	340
10.11.1	Surfaces	340
10.11.2	Grain Boundaries	341
10.11.3	Dislocations	341
10.12	Excess-Carrier Profiles	342
10.12.1	Generation at Surface	343
10.12.2	Generation in the Bulk	343

Part II Selected Topics

11	Heterostructures	347
11.1	Introduction	347
11.2	Heteroepitaxy	347
11.2.1	Growth Methods	347
11.2.2	Substrates	348
11.2.3	Growth Modes	351

11.2.4	Heterosubstrates	352
11.2.5	Pseudomorphic Structures	356
11.2.6	Plastic Relaxation	356
11.2.7	Surfactants	358
11.3	Energy Levels in Heterostructures	359
11.3.1	Band Lineup in Heterostructures	359
11.3.2	Quantum Wells	361
11.3.3	Superlattices	366
11.3.4	Single Heterointerface Between Doped Materials ...	368
11.4	Recombination in Quantum Wells	369
11.4.1	Thickness Dependence	369
11.4.2	Broadening Effects	370
11.4.3	Quantum Confined Stark Effect	374
11.5	Isotope Superlattices	375
11.6	Wafer Bonding	377
12	External Fields	379
12.1	Electric Fields	379
12.1.1	Bulk Material	379
12.1.2	Quantum Wells	381
12.2	Magnetic Fields	382
12.2.1	Free-Carrier Absorption	383
12.2.2	Energy Levels in Bulk Crystals	384
12.2.3	Energy Levels in a 2DEG	386
12.2.4	Shubnikov-de Haas Oscillations	387
12.3	Quantum Hall Effect	389
12.3.1	Integral QHE	389
12.3.2	Fractional QHE	393
12.3.3	Weiss Oscillations	394
13	Nanostructures	397
13.1	Introduction	397
13.2	Quantum Wires	397
13.2.1	V-Groove Quantum Wires	397
13.2.2	Cleaved-Edge Overgrowth Quantum Wires	401
13.2.3	Nanowhiskers	401
13.2.4	Nanobelts	403
13.2.5	Quantization in Two-Dimensional Potential Wells .	404
13.3	Quantum Dots	407
13.3.1	Quantization in Three-Dimensional Potential Wells	407
13.3.2	Electrical and Transport Properties	410
13.3.3	Self-assembled Preparation	413
13.3.4	Optical Properties	419

14	Polarized Semiconductors	425
14.1	Introduction	425
14.2	Spontaneous Polarization	425
14.3	Ferroelectricity	427
14.3.1	Materials	428
14.3.2	Soft Phonon Mode	428
14.3.3	Phase Transition	429
14.3.4	Domains	432
14.3.5	Optical Properties	433
14.4	Piezoelectricity	433
14.4.1	Piezoelectric Effect	433
14.4.2	Zincblende Crystals	434
14.4.3	Wurtzite Crystals	435
14.4.4	Piezoelectric Effects in Nanostructures	438
15	Magnetic Semiconductors	441
15.1	Introduction	441
15.2	Magnetic Semiconductors	441
15.3	Diluted Magnetic Semiconductors	442
15.4	Spintronics	448
15.4.1	Spin Transistor	448
15.4.2	Spin LED	448
16	Organic Semiconductors	451
16.1	Materials	451
16.1.1	Small Organic Molecules, Polymers	451
16.1.2	Organic Semiconductor Crystals	451
16.2	Electronic Structure	454
16.3	Doping	456
16.4	Transport Properties	457
16.5	Optical Properties	457
17	Graphene and Carbon Nanotubes	465
17.1	Graphene	465
17.1.1	Structure	465
17.1.2	Band Structure	465
17.1.3	Electrical Properties	468
17.1.4	Other Two-Dimensional Crystals	472
17.2	Carbon Nanotubes	473
17.2.1	Structure	473
17.2.2	Band Structure	474
17.2.3	Optical Properties	475
17.2.4	Other Anorganic Nanotubes	476

18	Dielectric Structures	481
18.1	Photonic Band Gap Materials	481
18.1.1	Introduction	481
18.1.2	General 1D Scattering Theory	481
18.1.3	Transmission of an N -Period Potential	483
18.1.4	The Quarter-Wave Stack	485
18.1.5	Formation of a 3D Band Structure	488
18.1.6	Disorder	491
18.1.7	Defect Modes	493
18.1.8	Coupling to an Electronic Resonance	497
18.2	Microscopic Resonators	500
18.2.1	Microdiscs	500
18.2.2	Purcell Effect	502
18.2.3	Deformed Resonators	503
18.2.4	Hexagonal Cavities	505
19	Transparent Conductive Oxide Semiconductors	511
19.1	Materials	511
19.2	Properties	512

Part III Applications

20	Diodes	519
20.1	Introduction	519
20.2	Metal-Semiconductor Contacts	520
20.2.1	Band Diagram in Equilibrium	520
20.2.2	Space-Charge Region	525
20.2.3	Schottky Effect	527
20.2.4	Capacitance	529
20.2.5	Current-Voltage Characteristic	532
20.2.6	Ohmic Contacts	543
20.2.7	Metal Contacts to Organic Semiconductors	546
20.3	Metal-Insulator-Semiconductor Diodes	548
20.3.1	Band Diagram for Ideal MIS Diode	548
20.3.2	Space-Charge Region	551
20.3.3	Capacitance	555
20.3.4	Nonideal MIS Diode	556
20.4	Bipolar Diodes	558
20.4.1	Band Diagram	558
20.4.2	Space-Charge Region	558
20.4.3	Capacitance	563
20.4.4	Current-Voltage Characteristics	565
20.4.5	Breakdown	575
20.4.6	Organic Semiconductor Diodes	580

20.5	Applications and Special Diode Devices	582
20.5.1	Rectification	582
20.5.2	Frequency Mixing	584
20.5.3	Voltage Regulator	586
20.5.4	Zener Diodes	588
20.5.5	Varactors.....	588
20.5.6	Fast-Recovery Diodes	589
20.5.7	Step-Recovery Diodes	590
20.5.8	pin-Diodes.....	591
20.5.9	Tunneling Diodes.....	592
20.5.10	Backward Diodes	595
20.5.11	Gunn Diodes	596
20.5.12	Heterostructure Diodes.....	597
21	Light-to-Electricity Conversion	599
21.1	Photocatalysis	599
21.2	Photoconductors	601
21.2.1	Introduction	601
21.2.2	Photoconductivity Detectors.....	601
21.2.3	Electrophotography.....	603
21.2.4	QWIPs	604
21.2.5	Blocked Impurity-Band Detectors	608
21.3	Photodiodes	610
21.3.1	Introduction	610
21.3.2	pn Photodiodes	611
21.3.3	pin Photodiodes.....	613
21.3.4	Position-Sensing Detector	615
21.3.5	MSM Photodiodes.....	616
21.3.6	Avalanche Photodiodes	623
21.3.7	Traveling-Wave Photodetectors.....	625
21.3.8	Charge Coupled Devices.....	627
21.3.9	Photodiode Arrays	633
21.4	Solar Cells	637
21.4.1	Solar Radiation	637
21.4.2	Ideal Solar Cells.....	638
21.4.3	Real Solar Cells	643
21.4.4	Design Refinements	643
21.4.5	Modules.....	645
21.4.6	Solar-Cell Types	646
21.4.7	Commercial Issues	651
22	Electricity-to-Light Conversion.....	653
22.1	Radiometric and Photometric Quantities	653
22.1.1	Radiometric Quantities	653
22.1.2	Photometric Quantities	653

22.2	Scintillators	654
22.2.1	CIE Chromaticity Diagram	655
22.2.2	Display Applications	658
22.2.3	Radiation Detection	659
22.2.4	Luminescence Mechanisms	660
22.3	Light-Emitting Diodes	661
22.3.1	Introduction	661
22.3.2	Spectral Ranges	661
22.3.3	Quantum Efficiency	662
22.3.4	Device Design	663
22.3.5	White LEDs	668
22.3.6	Quantum Dot LED	671
22.3.7	Organic LED	672
22.4	Lasers	674
22.4.1	Introduction	674
22.4.2	Applications	676
22.4.3	Gain	678
22.4.4	Optical Mode	680
22.4.5	Loss Mechanisms	687
22.4.6	Threshold	688
22.4.7	Spontaneous Emission Factor	689
22.4.8	Output Power	690
22.4.9	Temperature Dependence	692
22.4.10	Mode Spectrum	694
22.4.11	Longitudinal Single-Mode Lasers	695
22.4.12	Tunability	697
22.4.13	Modulation	698
22.4.14	Surface-Emitting Lasers	703
22.4.15	Optically Pumped Semiconductor Lasers	707
22.4.16	Quantum Cascade Lasers	708
22.4.17	Hot-Hole Lasers	709
22.5	Semiconductor Optical Amplifiers	710
23	Transistors	713
23.1	Introduction	713
23.2	Bipolar Transistors	714
23.2.1	Carrier Density and Currents	715
23.2.2	Current Amplification	718
23.2.3	Ebers–Moll Model	719
23.2.4	Current–Voltage Characteristics	721
23.2.5	Basic Circuits	723
23.2.6	High-Frequency Properties	725
23.2.7	Heterobipolar Transistors	725
23.2.8	Light-Emitting Transistors	726
23.3	Field-Effect Transistors	727

23.4	JFET and MESFET	729
23.4.1	General Principle	729
23.4.2	Static Characteristics	730
23.4.3	Normally On and Normally Off FETs	733
23.4.4	Field-Dependent Mobility	734
23.4.5	High-Frequency Properties	736
23.5	MOSFETs	737
23.5.1	Operation Principle	737
23.5.2	Current–Voltage Characteristics	738
23.5.3	MOSFET Types	743
23.5.4	Complementary MOS	743
23.5.5	Large-Scale Integration	746
23.5.6	Tunneling FETs	753
23.5.7	Nonvolatile Memories	755
23.5.8	Heterojunction FETs	757
23.6	Thin-Film Transistors	763
23.6.1	Annealing of Amorphous Silicon	763
23.6.2	TFT Devices	765
23.6.3	OFETs	765

Part IV Appendices

A	Tensors	769
B	Space Groups	773
C	Kramers–Kronig Relations	775
D	Oscillator Strength	777
E	Quantum Statistics	783
F	The $\mathbf{k} \cdot \mathbf{p}$ Perturbation Theory	787
G	Effective-Mass Theory	791
