Part I Stochastic Methods and Non-linear Dynamics

Overview		47
3 Master Equation in State Space		49
3.1	Introduction	49
3.2	Derivation	51
3.2.1	Derivation from the MARKOV Property	52
3.2.2	External Influences (Disturbances)	53
3.2.3	Internal Fluctuations	54
3.2.4	Derivation from Quantum Mechanics	57
3.3	Properties	64
3.3.1	Normalization	64
3.3.2	Non-negativity	65
3.3.3	The LIOUVILLE Representation	65
3.3.4	Eigenvalues	66
3.3.5	Convergence to the Stationary Solution	67
3.4	Solution Methods	68
3.4.1	Stationary Solution and Detailed Balance	68
3.4.2	Time-Dependent Solution	71
3.4.3	'Path Integral' Solution	72
3.5	Mean Value and Covariance Equations	79
4 BOLTZMANN-Like Equations		83
4.1	Introduction	83
4.2	Derivation	84
4.3	Subdivision into Several Types of Subsystems	87
4.4	Properties	88
4.4.1	Non-negativity and Normalization	88
4.4.2	The Gaskinetic BOLTZMANN Equation	88
4.4.3	The H-Theorem for the Gaskinetic BOLTZMANN Equation	91
4.4.4	Solution of the Gaskinetic BOLTZMANN Equation	94
4.5	Comparison of Spontaneous Transitions and Direct Interactions ...	95
4.5.1	Transitions Induced by Interactions	95
4.5.2	Exponential Function and Logistic Equation	96
4.5.3	Stationary and Oscillatory Solutions	97

5	Master Equation in Configuration Space	99
5.1	Introduction	99
5.2	Transitions in Configuration Space	100
5.2.1	Spontaneous Transitions	100
5.2.2	Pair Interactions	101
5.3	Mean Value and Covariance Equations	103
5.4	Corrections and Higher Order Interactions	107
5.5	Indirect Interactions and Mean Field Approaches	111
5.6	Comparison of Direct and Indirect Interactions	111
5.6.1	Differences Concerning the Covariance Equations	111
5.6.2	Differences Concerning the Mean Value Equations	112
6	The FOKKER-PLANCK Equation	115
6.1	Introduction	115
6.2	Derivation	115
6.3	Properties	119
6.3.1	The Continuity Equation	119
6.3.2	Normalization	120
6.3.3	The LIOUVILLE Representation	121
6.3.4	Non-negativity	121
6.3.5	Eigenvalues	121
6.3.6	Convergence to the Stationary Solution	121
6.4	Solution Methods	122
6.4.1	Stationary Solution	122
6.4.2	Path Integral Solution	123
6.4.3	Interrelation with the SCHRÖDINGER Equation	124
6.5	Mean Value and Covariance Equations	125
6.5.1	Interpretation of the Jump Moments	126
6.6	BOLTZMANN-FOKKER-PLANCK Equations	127
6.6.1	Self-Consistent Solution	132
7	LANGEVIN Equations and Non-linear Dynamics	135
7.1	Introduction	135
7.2	Derivation	137
7.3	Escape Time	141
7.4	Phase Transitions, LIAPUNOV Exponents, and Critical Phenomena	143
7.5	Routes to Chaos	145
7.5.1	RUELLE-TAKENS-NEWHOUSE Scenario and LIAPUNOV Exponents	146
7.5.2	Period Doubling Scenario and Power Spectra	147

Part II Quantitative Models of Social Processes

Overview	151
----------	-----

8	Problems and Terminology	153
8.1	Terms	153
8.1.1	System and Subsystems	153
8.1.2	State	153
8.1.3	Subpopulation	153
8.1.4	Socioconfiguration	156
8.1.5	Interaction	156
8.2	Problems with Modelling Social Processes	157
8.2.1	Complexity	157
8.2.2	Individuality	159
8.2.3	Stochasticity and Disturbances	159
8.2.4	Decisions and Freedom of Decision-Making	160
8.2.5	Experimental Problems	163
8.2.6	Measurement of Behaviours	163
8.3	Summary	164
9	Decision Theoretical Specification of the Transition Rates	167
9.1	Introduction	167
9.2	Derivation	168
9.2.1	The Multinomial Logit Model	168
9.2.2	Entropy Maximization	170
9.2.3	FECHNER'S Law	172
9.2.4	Utility and Distance Function	173
9.3	Pair Interaction Rates	176
9.3.1	Special Applications in the Social Sciences	183
9.4	Properties of the Utility Approach	185
9.4.1	Stationary Distribution	185
9.4.2	Contributions to the Utility Function	186
10	Opinion Formation Models	187
10.1	Introduction	187
10.2	Indirect Interactions	189
10.2.1	A Period Doubling Route to Chaos	191
10.2.2	A RUELLE-TAKENS-NEWHOUSE Route to Chaos	191
10.3	Direct Pair Interactions	191
10.3.1	Kinds of Pair Interactions	192
10.3.2	Oscillations	197
10.3.3	Influence of the Interaction Frequencies	201
10.3.4	Period Doubling Scenarios and Chaos	205
10.4	Generalizations	217
10.5	Spatial Spreading of Opinions	218
10.5.1	Opinion Spreading by Diffusion	218
10.5.2	Opinion Spreading by Telecommunication	220

11 Social Fields and Social Forces	225
11.1 Introduction	225
11.2 Derivation	226
11.3 The Social Force Model	229
11.3.1 Comparison with LEWIN's 'Social Field Theory'	233
11.4 Computer Simulations	235
11.4.1 Imitative Processes	237
11.4.2 Avoidance Processes	244
12 Evolutionary Game Theory	247
12.1 Introduction	247
12.2 Derivation of the Game Dynamical Equations	248
12.2.1 Payoff Matrix and Expected Success	248
12.2.2 Customary Derivation	249
12.2.3 Fields of Application	249
12.2.4 Derivation from the BOLTZMANN-Like Equations	250
12.3 Properties of Game Dynamical Equations	253
12.3.1 Non-negativity and Normalization	253
12.3.2 Formal Solution	253
12.3.3 Increase of the Average Expected Success in Symmetrical Games	254
12.3.4 Invariant of Motion for Antisymmetrical Games	256
12.3.5 Interrelation with the LOTKA-VOLTERRA Equations	257
12.3.6 Limit Cycles and Chaos	258
12.4 Stochastic Version of the Game Dynamical Equations	260
12.4.1 Self-Organization of Behavioural Conventions for the Case of Two Equivalent Competing Strategies	263
13 Determination of the Model Parameters from Empirical Data	275
13.1 Introduction	275
13.2 The Case of Complete Data	275
13.3 The Case of Incomplete Data	278
13.3.1 Parameter Estimation	282
13.3.2 Model Reduction	288
13.4 Migration in West Germany	289
13.4.1 First Model Reduction	290
13.4.2 Second Model Reduction	292
13.4.3 Comparison of the WEIDLICH-HAAG Model and the Generalized Gravity Model	295
13.4.4 Third Model Reduction	298
13.5 Evaluation of Empirically Obtained Results	300
13.5.1 Sensitivity Analysis	300
13.5.2 Decomposition of the Utility Functions with Respect to Explanatory Variables	301
13.5.3 Prognoses	302

13.6 Examples for Decompositions of Utility Functions 302

13.6.1 Purchase Pattern 302

13.6.2 Voting Behaviour 305

13.6.3 Gaps in the Market and Foundations of New Parties 308
