Abstract	13
Deutsche Zusammenfassung	15
List of Tables	17
List of Figures	19
Abbreviations	21
Introduction	23
1 The sensory compensation hypothesis	27
1.1 Former beliefs	27
1.2 Early research on sensory compensation in the blind	28
1.3 Popularity of the sensory compensation hypothesis	29
2 Prior research on blind listeners' auditory abilities	31
2.1 Auditory abilities	31
2.1.1 Speech discrimination	31
2.1.2 Auditory attention	31
2.1.3 Perception of acoustic details	32
2.1.4 Temporal aspects	32
2.1.5 Pattern recognition	33
2.1.6 Perception of pitch and loudness	34
2.1.7 Absolute threshold measurements	34
2.2 Simple versus complex auditory functions	35
2.3 Auditory memory	36

2.3.1	Short-term memory and working memory	37
2.3.2	Long-term memory	38
2.4	Physiological and brain imaging studies	39
2.5	Speaker identification and discrimination abilities	41
2.5.1	Behavioral studies on blind listeners' speaker recognition abilities.....	42
2.5.2	Physiological studies on blind listeners' speaker recognition abilities.....	44
2.6	Summary	47
3	Possible influences on human speaker identification	49
3.1	Listener characteristics	49
3.1.1	Blind listeners' onset and duration of blindness	49
3.1.2	Listeners' musical experience	49
3.1.3	Male vs. female listeners.....	50
3.1.4	Listeners' ages	51
3.1.5	Blind listeners' echolocation abilities	51
3.1.6	Listeners' talent and training in speaker identification	52
3.2	Voice lineup characteristics	53
3.2.1	Signal quality – (mobile) telephone transmission	53
3.2.2	Voice disguise – whisper	54
3.2.3	Time	56
4	Issues to consider when creating a voice lineup.....	57
5	Hypotheses for the experiment.....	59
6	Speaker identification experiment.....	61
6.1	Experimental design.....	61
6.1.1	Method.....	61
6.1.2	Speakers.....	64
6.1.3	Material.....	64
6.1.4	Listeners.....	66

6.2	Execution of the experiment	68
6.2.1	Pretest	68
6.2.2	Familiarization	69
6.2.3	Voice lineup presentation	70
7	Results	73
7.1	Fitting a multinomial log-linear model	73
7.2	Influence of signal quality on identification scores	76
7.3	Influence of time delay on identification scores	78
7.4	Further investigated influences	78
7.4.1	Male vs. female listeners	78
7.4.2	Target-absent vs. target-present voice lineups	78
7.4.3	Comparison of correct rejection rates and hit rates	79
7.4.4	Influence of onset and duration of blindness	81
7.4.5	Confidence accuracy	82
7.4.6	Musically trained vs. musically untrained listeners	82
7.5	Summary 1	83
7.6	Confusion rates: target speaker vs. distractor speakers	83
7.7	Listeners' perception and acoustic measurements	86
7.7.1	Acoustic measurements (speakers)	86
7.7.2	Perceptual feedback (listeners)	92
7.8	Summary 2	96
8	Interview with visually impaired forensic audio analysts	97
9	Discussion	99
9.1	Identification of unfamiliar speakers	99
9.2	Signal quality	100
9.3	Forgetting	102
9.4	Target-absent and target-present lineups	104
9.5	Confusion rates	105

9.6	Listener characteristics.....	107
9.7	Onset and duration of blindness	108
9.8	Inconsistencies and limitations of the study	109
9.9	Applying data to real cases	110
9.10	Should the blind work as forensic phonetic experts?	111
10	Conclusions	115
11	Future research	119
	References.....	121
