1	Nonlinear Oscillations — 1
1.1	Nonlinear Oscillations of a Conservative Single-Degree-of-Freedom System — 3
1.1.1	Qualitative Description of Motion by the Phase Plane Method — 5
1.2	Oscillations of a Mathematical Pendulum. Elliptic Functions — 9
1.3	Small-Amplitude Oscillations of a Conservative Single-Degree-of-Freedom System — 14
1.3.1	Straightforward Expansion — 15
1.3.2	The Method of Multiple Scales — 18
1.3.3	The Method of Averaging: The Van der Pol Equation — 22
1.3.4	The Generalized Method of Averaging. The Krylov–Bogolyubov Approach — 24
1.4	Forced Oscillations of an Anharmonic Oscillator — 27
1.4.1	Straightforward Expansion — 28
1.4.2	A Secondary Resonance at $\omega \approx \pm 3$ — 29
1.4.3	A Primary Resonance: Amplitude–Frequency Response — 31
1.5	Self-Oscillations: Limit Cycles — 37
1.5.1	An Analytical Solution of the Van der Pol Equation for Small Nonlinearity Parameter Values — 39
1.5.2	An approximate solution of the Van der Pol equation for large nonlinearity parameter values — 42
1.6	External Synchronization of Self-Oscillating Systems — 45
1.7	Parametric Resonance — 55
1.7.1	The Floquet Theory — 56
1.7.2	An Analytical Solution of the Mathieu Equation for Small Nonlinearity Parameter Values — 60
2	Integrable Systems — 65
2.1	Equations of Motion for a Rigid Body — 65
2.1.1	Euler’s Angles — 68
2.1.2	Euler’s Kinematic Equations — 71
2.1.3	Moment of Inertia of a Rigid Body — 73
2.1.4	Euler’s Dynamic Equations — 76
2.1.5	S.V. Kovalevskaya’s Algorithm for Integrating Equations of Motion for a Rigid Body about a Fixed Point — 79
2.2	The Painlevé Property for Differential Equations — 85
2.2.1	A Brief Overview of the Analytic Theory of Differential Equations — 85

2.2.2	A Modern Algorithm of Analysis of Integrable Systems — 88
2.2.3	Integrability of the Generalized Henon–Heiles Model — 94
2.2.4	The Linearization Method for Constructing Particular Solutions of a Nonlinear Model — 98
2.3	Dynamics of Particles in the Toda Lattice: Integration by the Method of the Inverse Scattering Problem — 100
2.3.1	Lax’s Representation — 104
2.3.2	The Direct Scattering Problem — 108
2.3.3	The inverse scattering transform — 116
2.3.4	N-Soliton Solutions — 120
2.3.5	The Inverse Scattering Problem and the Riemann Problem — 128
2.3.6	Solitons as Elementary Excitations of Nonlinear Integrable Systems — 133
2.3.7	The Darboux–Backlund Transformations — 135
2.3.8	Multiplication of Integrable Equations: The modified Toda Lattice — 139
3	Stability of Motion and Structural Stability — 145
3.1	Stability of Motion — 145
3.1.1	Stability of Fixed Points and Trajectories — 145
3.1.2	Succession Mapping or the Poincare Map — 149
3.1.3	Theorem about the Volume of a Phase Drop — 151
3.1.4	Poincare–Bendixson Theorem and Topology of the Phase Plane — 153
3.1.5	The Lyapunov Exponents — 155
3.2	Structural Stability — 162
3.2.1	Topological Reconstruction of the Phase Portrait — 162
3.2.2	Coarse Systems — 165
3.2.3	Cusp Catastrophe — 167
3.2.4	Catastrophe Theory — 169
4	Chaos in Conservative Systems — 174
4.1	Determinism and Irreversibility — 174
4.2	Simple Models with Unstable Dynamics — 180
4.2.1	Homoclinic Structure — 180
4.2.2	The Anosov Map — 182
4.2.3	The Tent Map — 183
4.2.4	The Bernoulli Shift — 187
4.3	Dynamics of Hamiltonian Systems Close to Integrable — 189
4.3.1	Perturbed Motion and Nonlinear Resonance — 189
4.3.2	The Zaslavsky–Chirikov Map — 193
4.3.3	Chaos and Kolmogorov–Arnold–Moser Theory — 195

5	Chaos and Fractal Attractors in Dissipative Systems — 200
5.1	On the Nature of Turbulence — 200
5.2	Dynamics of the Lorenz Model — 203
5.2.1	Dissipativity of the Lorenz Model — 205
5.2.2	Boundedness of the Region of Stationary Motion — 205
5.2.3	Stationary Points — 206
5.2.4	The Lorenz Model's Dynamic Regimes as a Result of Bifurcations — 207
5.2.5	Motion on a Strange Attractor — 208
5.2.6	Hypothesis About the Structure of a Strange Attractor — 209
5.2.7	The Lorenz Model and the Tent Map — 211
5.2.8	Lyapunov Exponents — 212
5.3	Elements of Cantor Set Theory — 213
5.3.1	Potential and Actual Infinity — 213
5.3.2	Cantor's Theorem and Cardinal Numbers — 217
5.3.3	Cantor sets — 222
5.4	Cantor Structure of Attractors in Two-Dimensional Mappings — 225
5.4.1	The Henon Map — 225
5.4.2	The Ikeda Map — 227
5.4.3	An Analytical Theory of the Cantor Structure of Attractors — 228
5.5	Mathematical Models of Fractal Structures — 230
5.5.1	Massive Cantor Set — 231
5.5.2	A binomial multiplicative process — 232
5.5.3	The Spectrum of Fractal Dimensions — 237
5.5.4	The Lyapunov Dimension — 240
5.5.5	A Relationship Between the Mass Exponent and the Spectral Function — 241
5.5.6	The Mass Exponent of the Multiplicative Binomial Process — 243
5.5.7	A Multiplicative Binomial Process on a Fractal Carrier — 244
5.5.8	A Temporal Data Sequence as a Source of Information About an Attractor — 245
5.6	Universality and Scaling in the Dynamics of One-Dimensional Maps — 249
5.6.1	General Regularities of a Period-Doubling Process — 250
5.6.2	The Feigenbaum–Cvitanovic Equation — 258
5.6.3	A Universal Regularity in the Arrangement of Cycles: A Universal Power Spectrum — 262
5.7	Synchronization of Chaotic Oscillations — 269

XIV — Contents

5.7.1 Synchronization in a System of Two Coupled Maps — 270

5.7.2 Types and Criteria of Synchronization — 272

Conclusion — 274
