

Table of contents

Table of contents	I
Abstract	V
Zusammenfassung	VII
1 Introduction	1
1.1 Motivation	1
1.2 Outline	3
2 Fundamentals	7
2.1 Crystalline silicon solar cells	7
2.1.1 Basic structure and functionality	7
2.1.2 Two-diode model and solar cell characteristics	11
2.1.3 Metal-semiconductor interface	15
2.2 Novel solar cell concepts based on n-type silicon	18
2.2.1 Solar cells with passivated rear side	20
2.2.2 Heterojunction solar cells	21
2.2.3 Back contact back junction solar cells	22
2.3 Chemical and electrochemical transformation of aluminum	24
2.3.1 Properties of aluminum	25
2.3.2 Corrosion and chemical etching	27
2.3.3 Electrochemical etching and anodizing	30
2.3.4 Plating on aluminum	33
2.4 Chemical and electrochemical metal deposition	34
2.4.1 Solid-solution interphase	35
2.4.2 Thermodynamics and kinetics	36
2.4.3 Electrochemical deposition from aqueous solutions	39
2.4.4 Electrochemical deposition from ionic liquids	40
2.4.5 Electroless deposition	41
3 Characterization methods	43
3.1 Surface characterization	43
3.1.1 Confocal laser scanning microscopy	44
3.1.2 Scanning electron microscopy	44
3.2 Characterization of metal stacks	45

3.2.1	Energy dispersive X-ray spectroscopy (EDX).....	45
3.2.2	Auger electron spectroscopy (AES)	46
3.3	Electrochemical characterization	47
3.3.1	Electrochemical capacitance voltage technique (ECV).....	47
3.3.2	Cyclic voltammetry (CV).....	47
3.4	Electrical measurements.....	49
3.4.1	Four point probe measurement.....	49
3.4.2	Transfer length measurement (TLM).....	49
3.5	Mechanical characterization of interfaces	50
3.5.1	Tape test.....	51
3.5.2	Peel force test.....	51
3.6	Current density distribution simulation.....	52
4	Plating on boron- and phosphorus-doped silicon	55
4.1	Electroless nickel deposition.....	55
4.2	Electrochemical plating processes.....	59
4.2.1	Light induced plating for contacts on n-type semiconductors.....	59
4.2.2	Forward bias plating for p-contacts	61
4.2.3	Simultaneous electrochemical plating on both polarities.....	64
4.3	Simulation of solar cell plating processes.....	66
4.3.1	Current transport in the solar cell device.....	66
4.3.2	Influence of electrolyte current transport	71
4.3.3	Optimization methods	71
4.4	Solar cells with fully plated metallization	73
4.4.1	Both-sided plated metallization for bifacial solar cells	73
4.4.2	Fully plated BC-BJ solar cells.....	77
5	Plating for heterojunction solar cells.....	89
5.1	Selective deposition on metallic seed layers.....	89
5.2	Electrochemical deposition on ITO by local masking.....	96
5.2.1	Masking by screen printing.....	97
5.2.2	Electrochemical deposition of nickel and copper	97
5.2.3	Solar cell results.....	99
5.2.4	Adhesion of plated layers on ITO	100
6	Electrochemical processes to complement PVD aluminum as contact for solar cells	105
6.1	Electrochemical deposition on evaporated aluminum.....	105

6.1.1 Optimization of zincate process	107
6.1.2 Surface modification by zincate treatment	108
6.1.3 Adhesion of plated metal stack on aluminum.....	109
6.2 Application to solar cells	115
6.2.1 Both sided aluminum metallized solar cells.....	116
6.2.2 Application to BC-BJ solar cells.....	121
6.3 Realization of a IBC metal pattern by using aluminum as plating protection...	128
6.3.1 Process development.....	129
6.3.2 Application to IBC solar cells.....	133
6.4 Local electrochemical contact separation.....	142
6.4.1 Anodic oxidizing of aluminum.....	142
6.4.2 Locally formed aluminum oxide.....	143
6.4.3 Maskless anodizing approach for back contact solar cells.....	147
6.4.4 Industrial implementation approaches.....	148
7 Summary and Outlook	153
Appendix.....	157
A1: Background plating on solar cells	157
A2: Palladium deposits onto doped silicon.....	158
A3: Nickel layers deposited by FBP	158
A4: Nickel layers deposited by FBP	159
A5: Copper plated heterojunction solar cells.....	159
A6: Metal electrode and locally oxidized sample.....	160
