List of Figures	vii
List of Tables	xi
1 Introduction	1
1.1 Motivation	1
1.2 Simulation examples	2
1.2.1 Test problem: 2-mass spring-damper model	2
1.2.2 Application problem: geometrically exact Cosserat rod & multi-body system	4
1.3 Organization of the thesis	6
2 Modeling mechanical systems: rigid bodies, flexible structures & co-simulation	7
2.1 Multibody system dynamics	7
2.1.1 Formulation of rigid bodies	8
2.1.2 Joints and force elements	14
2.1.3 The equations of motion: DAE or ODE	18
2.1.4 Numerical methods for multibody systems	21
2.2 Flexible structures	26
2.2.1 Classical linear Finite Element formulation	26
2.2.2 Efficient flexible structures: A geometrically exact Cosserat rod . .	27
2.2.3 Numerical methods for flexible structures	33
2.3 Co-Simulation	35
2.3.1 Sequential vs. parallel co-simulation	36
2.3.2 Interpolation and extrapolation of inputs	37
3 Kinematic coupling approach via algebraic constraint	39
3.1 From kinematic coupling by algebraic constraints to a force-displacement coupling	42
3.1.1 Notation, kinematic coupling constraint and monolithic equations	43
3.1.2 Derivation of the coupling equations	46
3.1.3 Co-simulation and approximation of inputs	49
3.2 Coupling of the test problem	49
3.3 Coupling of the application problem	51
3.3.1 Coupling at cable end points	51
3.3.2 Coupling at interior cable points	56

4	Stability analysis	59
4.1	Stability analysis of the presented differential-algebraic co-simulation approach	59
4.1.1	Analysis of zero-stability	59
4.1.2	Stability for finite time-steps	63
4.2	Stability analysis of the test problem	66
4.2.1	Excursion: Stability with coupling stiffness	70
4.3	Influence of the spatial discretization on the stability	72
4.3.1	Continuous flexible structure	72
4.3.2	Spatial discretization of the flexible structure	75
4.3.3	Non-equidistant spatial discretization	76
4.4	Stability analysis of the application problem	78
5	Numerical results	81
5.1	Numerical results of the test problem	81
5.1.1	Confirmation of stability	81
5.1.2	Numerical investigation of convergence	87
5.1.3	Comparison of coupling forces	90
5.2	Numerical results of the application problem	92
5.2.1	Cable in example multibody system	92
5.2.2	Cable coupled at interior point	95
5.2.3	Cable in a test rig	96
5.2.4	Coupling of multibody system and shell model	97
6	Conclusion	99
A	Detailed derivations of the stability analysis	101
A.1	Characteristic polynomial I: zero-stability analysis	101
A.2	Efficient evaluation of Λ : dependency on $\dot{\mathbf{v}}_F^{co}$ and $\dot{\mathbf{v}}_R$	103
A.3	Characteristic polynomial II: finite macro time steps	104
A.4	Non-equidistant spatial discretization: accuracy	105
	Bibliography	109
