

Contents

1	Introduction	1
1.1	Motivation	2
1.2	Original Contribution	3
1.3	Outline of the Thesis	3
2	State-of-the-Art: Mobile Channel Modeling	5
2.1	Procedure	5
2.2	Existing Path Loss Models	7
2.3	Existing Shadow Fading Models	11
2.4	Existing Multipath Fading Models	13
3	Challenges in Modeling the Physical Layer Links in Mobile Ad-Hoc Networks	25
3.1	Deficiencies of Existing Models	25
3.2	Modeling Approach for a Novel MANET Model	27
4	Channel Measurement Campaign	31
4.1	Measurement Concept	31
4.2	Measurement Setup	35
4.3	Pre-Processing of the Measurement Data	41
5	Adaption of Existing Modeling Approaches	47
5.1	Modeling of the Path Loss	47
5.2	Modeling of the Shadow Fading	54
5.3	Modeling of the Multipath Fading	62
6	Stochastic Geometry Shadow Fading Model	87
6.1	Concept	87
6.2	Implementation and Optimization	88
7	Evaluation of the Proposed Model	97
7.1	Test for Normal Distribution of the Shadow Fading	97
7.2	Test for Realistic Correlation of the Shadow Fading	101
7.3	Analysis of the Effect of Correlated Shadow Fading on MANET Performance	102
8	Implementation Concepts for the Proposed Model	113
8.1	Software Simulator	113
8.2	Hardware Simulator	115
9	Conclusion, Ongoing and Future Work	117
9.1	Conclusion	117
9.2	Ongoing and Future Work	118

A Annex	121
A.1 Doppler Power Spectral Densities	121
A.2 Measurement Tracks	124
A.3 RMSE Values for the Path Loss Prediction Models	130
List of Figures	131
List of Tables	135
List of Acronyms	137
List of Symbols	139
Bibliography	145
