Foreword	V
Preface and Acknowledgements	VI
 I Introduction.	 1
 II Constructing simple tensegrity models.	 5
Tensegrity tripod	5
Materials	6
Construction	7
Three-level 'Needle Tower'	22
Materials	22
Construction variation 1	23
Construction variation 2	30
Six-strut spherical tensegrity structure ('tensegrity icosahedron')	34
Materials	34
Construction	35
 III Reflections upon tensegrity.	 43
Forces: the interplay of tension and compression	43
Traditional versus tensegral.	43
Tensegrity maximises the advantages of tension and minimises the drawbacks of compression	46
Tensegrity structures are elastic and highly responsive	47
Tensegrity structures are synergic	47
The spiralling and volume-maintaining response of tensegrity structures to loads	49
Glossary	52
Forms: a geometry for thinking and feeling	57
Space in art and architecture	57
Shaping the space with innovative organic geometry	57
A short stroll through art history	59

Energetic geometry	60
Polyhedral shapes materialise energy states of space	60
‘Jitterbug’ and the icosahedron	62
The special status of the icosahedron among the other polyhedra.	66
A critique of ‘cubic thinking’	68
What really is a cube?	68
The cube cannot be chosen as the primary reference for the description of space	72
Some more about the cubic perspective	73
Part-whole relationship: inescapable complexity	74
Complexity is given à priori, irreducible and independent of size	74
Tensegrity: the epitome of <i>Fuller’s</i> concept.	77
The ‘tensegrity icosahedron’	77
<i>Fuller</i> and architecture.	83
The body: a biotensegral hierarchy	85
Tensegrity at the organism level	85
Bones are islands of compression.	85
The significance of the compressional discontinuity.	87
Tensegrity from the subcellular to the tissue level	87
The place of water in biotensegral structures	89
Biotensegrity and the organs	90
A unifying approach to anatomy and biomechanics	90
Steps towards unity	91
The ‘mesokinetic organ’	92
Putting things together: which mechanical model best fits body function and our perception of it?	94
 IV Inspirations	 95
Biotensegral body awareness	95
Creative thoughts by contributors sharing the spirit of biotensegrity	104
Dance and biotensegrity (Liane Simmel)	104
Ostéo éveil and biotensegrity (Michèle Tarento).	105
Biotensegrity and manual fascia therapy: the importance of the bones’ structure (Nadine Quéré).	107
Reflections of a cardiologist inspired by the concept of biotensegrity (Bernard Payrau).	108

Exploring the biotensegral response potential with special needs children and adults – advanced biomechanical rehabilitation (Diane Drake Vincentz)	112
Towards a tensegral grammar (Marc Nürnberger)	117
Further realisations and projects involving tensegrity	120
From bird flocks formation	120
... to virus' self-assembly and motion	120
... to innovative human-designed structures	121
 V Concluding words	 123
 VI Appendix	
Bibliography	124
Index	129
