|                                                                               |    |
|-------------------------------------------------------------------------------|----|
| 1. Introduction .....                                                         | 1  |
| 1.1 General information.....                                                  | 1  |
| 1.1.1 The kidney.....                                                         | 1  |
| 1.2 Focal segmental glomerular sclerosis .....                                | 3  |
| 1.2.1 Cellular origin of FSGS .....                                           | 3  |
| 1.2.2 Tracing the cellular origin of FSGS .....                               | 4  |
| 1.3 The parietal epithelial cell .....                                        | 5  |
| 1.3.1 The parietal epithelial cell as an adult glomerular stem cell.....      | 5  |
| 1.3.2 Characterization of parietal epithelial cells by specific markers ..... | 6  |
| 1.3.3 Molecular mechanisms of parietal epithelial cells in FSGS .....         | 7  |
| 1.4 Establishment of primary cultures of specific cells .....                 | 8  |
| 1.4.1 Technical approaches .....                                              | 8  |
| 1.4.2 PEC and POD reporter mice models.....                                   | 11 |
| 1.4.3 Established primary parietal and visceral epithelial cells.....         | 12 |
| 1.5 The objective of this thesis.....                                         | 13 |
| 2. Materials and Methods .....                                                | 15 |
| 2 .....                                                                       | 15 |
| 2.1 Materials.....                                                            | 15 |
| 2.1.1 Laboratory Equipment.....                                               | 15 |
| 2.1.2 Laboratory Supplies.....                                                | 17 |
| 2.1.3 Animals .....                                                           | 19 |
| 2.1.4 Cell Lines .....                                                        | 19 |
| 2.1.5 Cell Culture Media and Reagents.....                                    | 19 |
| 2.1.6 Chemicals and Commercial Solutions .....                                | 20 |
| 2.1.7 Solutions .....                                                         | 23 |
| 2.1.8 Antibodies .....                                                        | 24 |
| 2.1.9 Assays and Commercial Kits .....                                        | 26 |
| 2.1.10 Anesthetic .....                                                       | 26 |

|        |                                                                                |    |
|--------|--------------------------------------------------------------------------------|----|
| 2.1.11 | Software.....                                                                  | 27 |
| 2.2    | Methods .....                                                                  | 28 |
| 2.2.1  | Anesthesia in adult mice.....                                                  | 28 |
| 2.2.2  | Mouse 5/6 nephrectomy .....                                                    | 28 |
| 2.2.3  | Implantation of deoxycorticosterone acetate (DOCA) in mice .....               | 29 |
| 2.2.4  | Post-operative treatment of mice .....                                         | 29 |
| 2.2.5  | Serum preparation of mice.....                                                 | 29 |
| 2.2.6  | Metabolic cages .....                                                          | 30 |
| 2.2.7  | Treating mice with anti-TGF-beta antibody .....                                | 30 |
| 2.2.8  | Mouse perfusion with PFA and subsequent preparation of tissue .....            | 31 |
| 2.2.9  | Preparation of paraffin blocks and paraffin sections.....                      | 31 |
| 2.2.10 | Mouse perfusion with magnetic bead solution.....                               | 31 |
| 2.2.11 | Isolation and culture of mouse glomeruli .....                                 | 32 |
| 2.2.12 | Cell culture conditions.....                                                   | 33 |
| 2.2.13 | Trypsinization of cells .....                                                  | 33 |
| 2.2.14 | Freezing of cells.....                                                         | 33 |
| 2.2.15 | Cell counting with Neubauer chamber .....                                      | 34 |
| 2.2.16 | Thawing of cells.....                                                          | 35 |
| 2.2.17 | Generation of primary cultures of parietal epithelial cells and podocytes..... | 35 |
| 2.2.18 | WST-1 and BrdU assay.....                                                      | 38 |
| 2.2.19 | Scratch assay .....                                                            | 39 |
| 2.2.20 | Beta-galactosidase assay .....                                                 | 40 |
| 2.2.21 | Determination of luciferase activity.....                                      | 41 |
| 2.2.22 | Cell lysate preparation.....                                                   | 41 |
| 2.2.23 | PAS staining.....                                                              | 41 |
| 2.2.24 | Immunofluorescence.....                                                        | 42 |
| 2.2.25 | Determination of protein concentration.....                                    | 42 |
| 2.2.26 | Immunoblotting .....                                                           | 43 |
| 2.2.27 | Video microscopy .....                                                         | 44 |
| 3.     | Results.....                                                                   | 45 |
| 3      | .....                                                                          | 45 |
| 3.1    | Primary culture of glomerular parietal and visceral epithelial cells .....     | 45 |

|       |                                                                                            |     |
|-------|--------------------------------------------------------------------------------------------|-----|
| 3.1.1 | Capsulated or decapsulated glomeruli.....                                                  | 45  |
| 3.1.2 | Morphology of primary parietal epithelial cells and podocytes.....                         | 46  |
| 3.1.3 | Primary culture of parietal epithelial cells and podocytes.....                            | 51  |
| 3.1.4 | Characterization of primary cell cultures .....                                            | 54  |
| 3.2   | EGF and HGF signaling in parietal epithelial cells .....                                   | 63  |
| 3.2.1 | EGF and HGF receptors in activated PECs from an FSGS mouse model .....                     | 63  |
| 3.2.2 | <i>In vitro</i> investigations of EGF signaling in primary parietal epithelial cells.....  | 66  |
| 3.2.3 | <i>In vitro</i> investigations of HGF signaling in primary parietal epithelial cells ..... | 72  |
|       | .....                                                                                      | 77  |
| 3.3   | Beneficial effect of anti-TGF-beta treatment in an FSGS mouse model.....                   | 79  |
| 3.3.1 | Histology and laboratory results .....                                                     | 79  |
| 3.3.2 | Regeneration of podocytes after treatment of FSGS with anti-TGF- $\beta$ -antibody.....    | 83  |
| 3.3.3 | Parietal epithelial cell activation .....                                                  | 84  |
| 3.3.4 | Podocyte density.....                                                                      | 85  |
| 4.    | Discussion .....                                                                           | 87  |
| 4     | .....                                                                                      | 87  |
| 4.1   | Primary cultures of PECs or podocytes with proven origin.....                              | 87  |
| 4.2   | <i>In vitro</i> characterization of PECs and podocytes .....                               | 88  |
| 4.3   | The role of PECs in FSGS .....                                                             | 90  |
| 5.    | Summary .....                                                                              | 95  |
| 6.    | Index of abbreviations .....                                                               | 97  |
| 7.    | Index of tables .....                                                                      | 99  |
| 8.    | Index of illustrations .....                                                               | 99  |
| 9.    | Literature .....                                                                           | 101 |
