|                                                                     |      |
|---------------------------------------------------------------------|------|
| Abstract.....                                                       | V    |
| Zusammenfassung .....                                               | VII  |
| Acknowledgements.....                                               | IX   |
| Figures.....                                                        | XIII |
| Tables .....                                                        | XV   |
| 1 Introduction.....                                                 | 1    |
| 1.1 Machine Learning .....                                          | 1    |
| 1.2 Deep Learning .....                                             | 2    |
| 1.3 High-throughput time-lapse microscopy of murine stem cells..... | 3    |
| 1.4 Problem Statement.....                                          | 7    |
| 1.5 Structure of the thesis .....                                   | 7    |
| 2 Introduction to deep neural networks.....                         | 9    |
| 2.1 Feedforward Neural Networks.....                                | 9    |
| 2.1.1 Perceptron.....                                               | 9    |
| 2.1.2 Limitations of a Perceptron.....                              | 12   |
| 2.1.3 Multilayer Perceptron .....                                   | 12   |
| 2.1.4 Backpropagation .....                                         | 14   |
| 2.2 Recurrent Neural Networks .....                                 | 14   |
| 2.2.1 Basic RNN .....                                               | 15   |
| 2.2.2 Vanishing Gradient Problem.....                               | 16   |
| 2.2.3 Long Short-Term Memory .....                                  | 17   |
| 2.2.4 Bidirectional RNN.....                                        | 19   |
| 2.3 Training Neural Networks .....                                  | 20   |
| 2.3.1 Input normalization.....                                      | 20   |
| 2.3.2 Parameter Initialization for RNN.....                         | 21   |
| 2.3.3 Parameter optimization methods .....                          | 22   |
| 2.3.4 Regularization .....                                          | 25   |

3 Using RNNs to predict the lineage choice of stem cells .....31

3.1 Methods.....31

3.1.1 Biological data .....31

3.1.2 Extracting features from images.....36

3.1.3 Baseline with SVM.....37

3.1.4 Recurrent Neural Networks.....38

3.2 Results.....45

3.2.1 RNNs based on morphology yield high performance on labeled data.....45

3.2.2 RNNs have long training time but short test time.....48

3.2.3 RNNs can predict lineage choice before biological marker .....48

3.2.4 Accuracy can be improved by only taking high-confidence predictions..50

3.2.5 Shape and Texture are important features.....52

4 Discussion .....55

4.1 Different performance on movies .....55

4.2 Robustness of features .....55

4.3 Building better features .....56

4.4 Limitations of RNNs.....57

4.5 High accuracy before biological marker .....58

4.6 Outlook.....58

4.6.1 Learning on raw images .....58

4.6.2 Finding specific important features by feature reduction .....59

4.6.3 Predicting cell fates live during movie acquisition.....59

4.6.4 Using lineages of cells instead of only one cell cycle.....60

5 Conclusion .....61
