

# Contents

**Foreword — v**

**Preface — xv**

**List of contributing authors — xxi**

Christoph Schick, Evgeny Zhuravlev, René Androsch, Andreas Wurm,  
and Jörn W.P. Schmelzer

## **1 Influence of Thermal Prehistory on Crystal Nucleation and Growth in Polymers — 1**

- 1.1 Introduction — 1
- 1.2 State of the Art — 2
  - 1.2.1 Dependence of the Properties of Glass-forming Melts on Melt History — 2
  - 1.2.2 Polymer Crystallization — 6
  - 1.2.3 Differential Fast Scanning Calorimetry — 9
- 1.3 Experimental — 14
  - 1.3.1 Samples — 14
  - 1.3.2 Suppression of Homogeneous Nucleation at Fast Cooling — 16
  - 1.3.3 Non-isothermal Ordering Kinetics — 28
  - 1.3.4 Isothermal Ordering Kinetics — 36
  - 1.3.5 Identification of Different Nuclei Populations — 48
  - 1.3.6 Enthalpy Relaxation and Crystal Nucleation in the Glassy State — 52
  - 1.3.7 Summary of Experimental Results and Conclusions — 72
- 1.4 Illumination of the Nucleation and Growth Mechanism — 74
  - 1.4.1 Low-temperature Endotherms and Homogeneous Nucleation — 74
  - 1.4.2 Some Brief Theoretical Considerations — 78
- 1.5 Conclusions and Outlook — 80

Gerhard Wilde

## **2 Early Stages of Crystal Formation in Glass-forming Metallic Alloys — 95**

- 2.1 Introduction — 95
- 2.2 Marginal Glass-formers — 98
  - 2.2.1 Nucleation versus Growth Control — 98
  - 2.2.2 Processing Pathway Modifications — 101
  - 2.2.3 Nucleation and Growth Kinetics — 105
  - 2.2.4 Characterization of the Amorphous Phase — 109
  - 2.2.5 Nanocrystal Formation at Temperatures Well Below  $T_g$  — 115
- 2.3 Deformation-induced Nanocrystal Formation — 124
- 2.4 Bulk Metallic Glasses — 127
- 2.5 Conclusions and Hypotheses — 131

Ivan Gutzow, Radost Pascova, Nikolai Jordanov, Stoyan Gutzov, Ivan Penkov,  
Irena Markovska, Jörn W.P. Schmelzer, and Frank-Peter Ludwig

<b>3</b>	<b>Crystalline and Amorphous Modifications of Silica: Structure, Thermodynamic Properties, Solubility, and Synthesis — 137</b>
3.1	Introduction — 137
3.2	Properties of Silica Modifications: Literature Search — 140
3.2.1	Classical SiO <sub>2</sub> -literature — 141
3.2.2	Original Literature Sources on the Different Silica Modifications — 141
3.2.3	Internet Search — 142
3.3	Phase Diagram of SiO <sub>2</sub> — 142
3.3.1	Fenner's Classical Diagram — 142
3.3.2	Flörke's Diagram — 143
3.3.3	Contemporary ( <i>p</i> – <i>T</i> )-phase Diagrams of SiO <sub>2</sub> — 144
3.4	Modifications of SiO <sub>2</sub> and Their Synthesis — 148
3.4.1	Mineralogical Characteristics of the SiO <sub>2</sub> -modifications — 148
3.4.2	Synthesis of Quartz — 148
3.4.3	Synthesis and Stabilization of $\beta$ -cristobalite — 151
3.4.4	Synthesis of Keatite: Classical Aspects — 159
3.4.5	Synthesis of Coesite — 160
3.4.6	Stishovite: Synthesis and Thermal Stability — 160
3.4.7	Synthesis of Amorphous Modifications of Silica — 163
3.5	Structure and Thermodynamic Properties of the SiO <sub>2</sub> -modifications — 164
3.6	Solubility of the Different SiO <sub>2</sub> -modifications — 170
3.6.1	General Thermodynamic Dependencies — 170
3.6.2	Solubility Diagram of SiO <sub>2</sub> . Ostwald's Rule of Stages — 175
3.6.3	Solubility of SiO <sub>2</sub> : Size Effects — 181
3.6.4	Different SiO <sub>2</sub> -modifications at Hydrothermal Conditions: Technological Aspects — 183
3.7	Resources of the Silica Modifications — 186
3.7.1	Mineral Resources of Quartz — 186
3.7.2	Plant Resources of Silica — 187
3.7.3	Industrial Waste as Sources of Silica — 188
3.7.4	Coesite and Stishovite as Impactite Remnants — 188
3.8	Some Particularly Interesting Properties of Silica — 189
3.9	General Discussion: Technical Perspectives — 190

Irina G. Polyakova

<b>4</b>	<b>The Main Silica Phases and Some of Their Properties — 197</b>
4.1	Introduction — 197
4.2	Specific Properties of Silica Resulting from the Electronic Structure of Silicon — 198

4.2.1	Specific Properties of Silica Compounds and Differences as Compared to Chemical Analogs: Silicon and Carbon —	198
4.2.2	Electron Structure of the Silicon Atom and its Interaction with Oxygen —	201
4.2.3	Consequences of $\pi$ -Bonding in Silica —	202
4.2.4	Increase in Silicon Coordination Number as a Result of <i>s-p-d</i> -hybridization —	203
4.2.5	Implication of <i>s-p-d</i> -hybridization for Chemical Reactions and Physical Transformations of Silica —	205
4.3	Phases of Silica and Their Properties —	207
4.3.1	Dense Octahedral Silicas: High Pressure Phases —	209
4.3.2	Clathrasils: Friable Silica Phases —	210
4.3.3	Exception: Fibrous Silica —	211
4.3.4	Proper Silicas —	211
4.3.5	Main Crystalline Tetrahedral Silicas —	213
4.3.6	Amorphous Silica —	223
4.3.7	Polyamorphism —	225
4.4	Quartz and Some of Its Properties —	228
4.4.1	Enantiomorphism of Quartz —	228
4.4.2	Twins (Zwillinge) in Quartz —	229
4.4.3	Anisotropy of Quartz —	232
4.4.4	Thermal Expansion of Quartz —	233
4.4.5	High-Low or ( $\alpha - \beta$ )-Transformation in Quartz —	241
4.4.6	Pressure-induced Amorphization of Crystalline Silica —	245
4.5	Hydrothermal Synthesis of Quartz —	245
4.5.1	Brief History —	246
4.5.2	Temperature Drop Method —	247
4.5.3	Main Problems of Hydrothermal Synthesis of Quartz —	250
4.6	Concluding Remarks —	261
4.7	Appendix: The Crystal Skulls —	261

Natalia M. Vedishcheva and Adrian C. Wright

5	<b>Chemical Structure of Oxide Glasses: A Concept for Establishing Structure-Property Relationships —</b>	<b>269</b>
5.1	Introduction —	269
5.2	Structural Models —	270
5.3	Thermodynamic Approach —	274
5.4	Concept of Chemical Structure —	277
5.5	Short-range Order —	281
5.5.1	$\text{Na}_2\text{O}-\text{B}_2\text{O}_3$ Glasses —	281
5.5.2	$\text{Li}_2\text{O}-\text{B}_2\text{O}_3$ Glasses and Melts —	283
5.5.3	$\text{Na}_2\text{O}-\text{SiO}_2$ Glasses —	287
5.5.4	$\text{Na}_2\text{O}-\text{B}_2\text{O}_3-\text{SiO}_2$ Glasses —	289

- 5.6 Intermediate-Range Order — **289**
- 5.7 Structure–Property Relationships — **293**
- 5.8 Summary and Conclusions — **296**

**Boris Z. Pevzner and Sergey V. Tarakanov**

**6 Bubbles in Silica Melts: Formation, Evolution, and Methods of Removal — 301**

*Part I: Experimental Data and Basic Mechanisms — 301*

- 6.1 Introduction — **301**
- 6.2 Sources of Bubbles in Silica Melt and Glass — **302**
  - 6.2.1 Brief Account of the Technology of Silica Glass Production — **302**
  - 6.2.2 Raw Materials as a Source of Bubbles — **303**
  - 6.2.3 Furnace Atmosphere as a Source of Bubbles — **305**
  - 6.2.4 Interaction of Heaters and Form-shaping Equipment with the Melt as Source of Bubbles — **308**
  - 6.2.5 Concentrations of Impurities, Including Dissolved Gases, in Commercial Silica Glasses — **308**
  - 6.2.6 Experimental Study of Formation and Evolution of Bubbles in Silica Melts — **309**
- 6.3 Physico-chemical Properties of Silica Melts Influencing the Formation and Evolution of Gas Bubbles — **312**
  - 6.3.1 Surface Tension — **312**
  - 6.3.2 Density — **312**
  - 6.3.3 Viscosity — **313**
  - 6.3.4 Solubility and Diffusion of Gases — **315**
- 6.4 Summary to Part I — **324**

*Part II: Theoretical Analysis and Computer Simulation of the Process — 325*

- 6.5 Introduction to Part II — **325**
  - 6.5.1 Main Stages of Fusion of Powdered Silica under Heating and Evolution of Bubble Structure — **325**
  - 6.5.2 Selection of Parameters for the Temperature Dependence Equations that describe the Properties of the Silica Melt Affecting the Kinetics of the Process — **326**
- 6.6 Micro-rheological Model and Computer Simulation of the Process — **327**
  - 6.6.1 The Micro-rheological Model of Powder Sintering and Structuring of a Porous Body — **328**
  - 6.6.2 Influence of Some Technological Factors on Formation of Bubble Structure under Heating of Powdered Silica Glass: Computer Simulation of the Process — **335**
- 6.7 Summary to Part II — **343**

*Part III: Mathematical Modeling and Computer Simulation of the Behavior of  
Gas-Filled Bubbles in Silica Melts — 345*

- 6.8 Introduction — 345
- 6.9 Behavior of Isolated Bubbles — 347
- 6.10 Behavior of Solitary Gas-filled Bubbles under Mass Exchange with the Melt — 348
- 6.11 Two-phase Approach to the Description of Mono-disperse Ensembles of Bubbles — 351
- 6.12 Two-phase Approach to the Description of Poly-disperse Ensembles of Bubbles — 356
- 6.13 Diffusion of the Dissolved Gas in the Melt — 360
- 6.14 Relative Motion of Bubbles in the Melt: Modification of the Mathematical Model — 364
- 6.15 Flow of the Melt Governed by the Motion of the Bubbles: Complete System of Equations for Modeling of the Behavior of Gas-filled Bubble Ensembles in the Melt — 369
- 6.16 Summary to Part III — 372

Victor K. Leko

**7 Regularities and Peculiarities in the Crystallization Kinetics of Silica Glass — 377**

- 7.1 Introduction — 377
- 7.2 Literature Review — 381
- 7.3 Development of Experimental Techniques — 391
- 7.4 Basic Phenomenological Features of the Crystallization Processes — 394
- 7.5 Influence of the Degree of Silica Reduction — 398
- 7.6 Influence of Concentration of “Structural Water” — 402
- 7.7 Influence of the Degree of Fusion Penetration of Quartz or Cristobalite Particles on Crystallization of Quartz Glasses — 405
- 7.8 Influence of Surface Contamination on Crystallization Kinetics — 408
- 7.9 Influence of the Composition of the Gas Medium on Crystallization of Quartz Glass — 411
  - 7.9.1 Introductory Comments — 411
  - 7.9.2 On Crystallization in Dry Gas Media — 411
  - 7.9.3 Experiments on Crystallization in an Atmosphere Containing Water Vapor — 413
  - 7.9.4 Crystallization of Quartz Glass in the Atmosphere of Gases in Equilibrium with the Melt — 414
- 7.10 Influence of the Drawing Process on the Crystallization Kinetics of Tubes of Quartz Glasses — 417
- 7.11 Summary of Results and Discussion — 422
  - 7.11.1 Introductory Remarks — 422

7.11.2	Influence of Surface Reactions on Crystallization —	<b>423</b>
7.11.3	Relation Between Crystallization Rate and Viscosity —	<b>427</b>
7.12	Conclusions —	<b>435</b>

Vladimir M. Fokin, Alexander Karamanov, Alexander S. Abyzov, Jörn W.P. Schmelzer, and Edgar D. Zanotto

<b>8</b>	<b>Stress-induced Pore Formation and Phase Selection in a Crystallizing Stretched Glass —</b>	<b>441</b>
8.1	Introduction —	<b>441</b>
8.2	Stress Induced Pore Formation and Phase Selection in a Crystallizing Stretched Glass of Regular Shape —	<b>443</b>
8.2.1	The Model —	<b>443</b>
8.2.2	Experiments —	<b>445</b>
8.2.3	Theoretical Interpretation: Classical Nucleation Theory —	<b>452</b>
8.2.4	Theoretical Interpretation: Generalized Gibbs Approach —	<b>460</b>
8.3	Sintered Diopside-albite Glass-ceramics Forming Crystallization-induced Porosity —	<b>467</b>
8.3.1	Introduction —	<b>467</b>
8.3.2	Experimental —	<b>468</b>
8.3.3	Results and Discussion —	<b>470</b>

Vladimir G. Baidakov

<b>9</b>	<b>Crystallization of Undercooled Liquids: Results of Molecular Dynamics Simulations —</b>	<b>481</b>
9.1	Introduction —	<b>481</b>
9.2	Thermodynamics and Kinetics of Crystal Formation —	<b>484</b>
9.3	Description of the Systems under Investigation in the Present Study —	<b>487</b>
9.3.1	Models —	<b>487</b>
9.3.2	Phase Diagram —	<b>488</b>
9.4	Methods of Modeling of Spontaneous Crystallization —	<b>489</b>
9.4.1	Mean Life-time Method —	<b>489</b>
9.4.2	Mean First-passage Time Method —	<b>493</b>
9.4.3	Transition Interface Sampling —	<b>496</b>
9.5	Temperature Dependence of the Interfacial Free Energy Density Crystal-liquid for Planar Interfaces —	<b>498</b>
9.5.1	Triple Point —	<b>498</b>
9.5.2	Melting Line —	<b>499</b>
9.6	Kinetics of Crystallization in a cLJ-system —	<b>503</b>
9.6.1	Crystallization Parameters —	<b>503</b>
9.6.2	Nucleation Rate —	<b>507</b>
9.6.3	Comparison of Homogeneous Nucleation Theory with Computer Simulation —	<b>508</b>

- 9.6.4 Nucleation in the Region Below the Endpoint of the Melting Line — **509**
- 9.7 Kinetics of Crystallization in the mJL-system and Free Energy of the Clusters of the Crystalline State — **512**
- 9.7.1 Pressure Dependence of the Nucleation Rate — **512**
- 9.7.2 Temperature Dependence of the Nucleation Rate — **513**
- 9.8 Discussion and Conclusions — **517**

Gyan P. Johari and Jörn W.P. Schmelzer

- 10 Crystal Nucleation and Growth in Glass-forming Systems: Some New Results and Open Problems — 521**
- 10.1 Introduction — **522**
- 10.2 Consequences of Stochastic Structural Fluctuations in Ultraviscous Melts — **527**
- 10.2.1 Structure Fluctuations, Nucleation and Distribution of Relaxation Times — **527**
- 10.2.2 Structure Fluctuations and the Notion of Disordered Cluster Formation — **528**
- 10.3 A Case Study: Crystallization Kinetics of a Typical Metal Alloy Melt — **535**
- 10.3.1 General Considerations — **535**
- 10.3.2 One Experimental Example — **537**
- 10.3.3 Theoretical Interpretation in Terms of the KJMA-approach — **540**
- 10.3.4 Crystallization on Rate Heating — **543**
- 10.3.5 Differences Between Isothermal and Rate-heating Crystallization — **546**
- 10.3.6 Origin of the Second Peak for Crystallization on Rate-heating — **548**
- 10.4 Thermal Effects of Crystallization on Its Kinetics — **550**
- 10.4.1 General Remarks — **550**
- 10.4.2 Rayleigh–Bénard Convection Effects — **551**
- 10.4.3 Marangoni or Thermo-capillarity Convection Effect — **553**
- 10.5 Classical and Generalized Gibbs' Approaches to Cluster Formation and Growth — **554**
- 10.5.1 Basic Ideas — **554**
- 10.5.2 Application to Nucleation — **556**
- 10.5.3 Application to Cluster Growth Processes — **562**
- 10.5.4 Thermodynamics versus Kinetics: Ridge Crossing — **563**
- 10.6 Specific Interfacial Energy and the Skapski–Turnbull Relation — **568**
- 10.6.1 General Approach to the Determination of the Specific Interfacial Energy: Taylor Expansion — **568**
- 10.6.2 Stefan's Rule and Skapski–Turnbull Relation: Some Interpretation and Extension to Thermodynamic Non-equilibrium States — **570**

<b>10.7</b>	<b>Dependence of Crystal Nucleation and Growth Processes on Pre-history — 573</b>
