	References	10
2	Architectural Transformations in Distributed Systems.....	13
2.1	Software Architectures and Communication Patterns.....	13
2.2	Distributed Service Systems: Clustering, Grids and Clouds	17
2.3	Architectures: Peer-to-Peer	19
2.4	Performance Optimisation	23
2.5	Distributed Transactions	26
2.6	Distributed Databases	30
2.7	System Examples: Google Spanner, a Global DDB.....	38
2.8	Conclusions	43
	References	44
3	Evolution of Clustering and Parallel Computing.....	45
3.1	Clustering and Grids: Performance Parameters and Basic Models	48
3.2	Performance-Energy-Price Trade-Offs in Clusters and Grids.....	62
3.3	Resource Management in Clusters	64
3.4	Application Management in Clusters	65
3.5	Application Management in Grids	66
3.6	Distributed Applications	71
3.7	Conclusions	74
	References	75
4	Cloud Computing, Virtualisation, Storage and Networking	77
4.1	Clouds: Technology Stack, Basic Models and Services.....	78
4.2	Virtualisation of Services and Resources	92
4.3	SDN – Software-Defined Networking	105
4.4	Backup Services within Clouds. as Advanced Cloud Backup Technology	110
4.4.1	Backup as Important Component of Informational Safety	111

xxi

4.4.2	RAIC: Storage Service Integration	117
4.5	RAIC Integration for Network Storages on Mobile Devices	125
4.5.1	Efficient Access to Storage Services from Mobile Devices	126
4.5.2	A New Must-Have App: RAIC Integrator for Smartphones	128
4.6	Conclusions	131
	References	131
5	Smart Grid, Internet of Things and Fog Computing	135
5.1	Smart Grid as Integration Technology for the Networks of Energy Supply and Telecommunication	136
5.1.1	Services Architectures and Multi-level Models	144
5.1.2	Smart Grid: Enabling Network Technologies	158
5.1.3	Case Study: A CAD Toolset for the Design of Energy-Efficient Combined Networks	177
5.2	From Internet of Services to Internet of Things: Fog Computing	184
5.2.1	Enabling Technologies for IoT	188
5.2.2	Case Studies on IoT with On-Board Micro-controller Raspberry Pi	194
5.2.3	The Future Industry 4.0 Vision	203
5.2.4	Fog Computing	204
5.3	Conclusions	206
	References	209
6	Future Mobile Communication: From 4G To 5G, 5G Enabling Techniques	211
6.1	Conventional Techniques	211
6.1.1	LTE Networks	213
6.1.2	Satellite-Based Radio Systems	215
6.2	A New Generation of Mobile Communication	222
6.2.1	Visions and Requirements	224
6.2.2	5G Inter-Operability	233
6.2.3	Future Standard IMT 2020. Deployment Scenarios	235
6.2.4	Resource Allocation Method for Future WLAN	241
6.3	Conclusions	244
	References	244
7	Security in Distributed Systems	247
7.1	Security and Protection Goals	248
7.2	Protection Techniques	253
7.2.1	Checksum and Digest	254
7.2.2	Encryption	255
7.2.3	Steganography	258

7.2.4	Orchestration, Parallelisation and Multiplexing	258
7.2.5	Anonymisation	258
7.2.6	Trusted Computing and Physical Protection	259
7.3	Security Layers	259
7.3.1	Network Encryption: IPsec	259
7.3.2	Transport Encryption: TLS	260
7.3.3	Content Encryption: S/MIME and PGP	260
7.3.4	Authorisation: Kerberos and OAuth2	261
7.3.5	Further Secure Services: DNS-SEC, VPNs and Proxies	261
7.4	Security Protocols and Network Concepts	261
7.5	Firewalls	268
7.6	Security in Web Applications: Legal and Technological Aspects	279
7.6.1	Technological Aspects of Data Security Guaranteeing Web Systems	281
7.6.2	Legal Aspects of Data Security Guaranteeing Web Systems	283
7.7	Steganography in Distributed Systems	288
7.7.1	Steganography in Development	290
7.7.2	Steganography: Main Concepts	294
7.7.3	Watermarks and Steganography	298
7.8	Anonymity and MIX Networks	301
7.9	Conclusions	306
	References	307
