Preface IX

List of Contributors XI

- 1 Introduction** 1
Jinghua Guo
- 2 High-Resolution Soft X-Ray Microscopy for Imaging Nanoscale Magnetic Structures and Their Spin Dynamics** 7
Peter Fischer, Mi-Young Im, and Brooke L. Mesler
 - 2.1 Introduction 7
 - 2.2 X-Ray Optics and Soft X-Ray Microscopy 11
 - 2.3 Magnetic Soft X-Ray Microscopy 12
 - 2.4 Static Nanoscale Magnetic Structures 16
 - 2.5 Spin Dynamics in Nanoscale Magnetic Structures 22
 - 2.6 Future Perspectives for Magnetic Soft X-Ray Microscopy 27
 - Acknowledgments 28
 - References 28
- 3 Advances in Magnetization Dynamics Using Scanning Transmission X-Ray Microscopy** 39
Tolek Tyliczszak and Kang Wei Chou
 - 3.1 Introduction 39
 - 3.2 Magnetism in Confined Structures 40
 - 3.2.1 Magnetic Thin Film Structures of Ideally Soft Materials 41
 - 3.2.2 Spin Dynamics of the Magnetic Vortex State 42
 - 3.3 Experimental Setup 43
 - 3.3.1 Zone Plate 43
 - 3.3.2 Radiation Damage and Choice of Detectors 45
 - 3.3.3 Time-Resolved Magnetic Imaging 46
 - 3.3.3.1 Contrast Mechanism for Magnetic Imaging 46
 - 3.3.3.2 Sample and Stripline Configuration for In-Plane Field Excitation 47

X-Rays in Nanoscience. Edited by Jinghua Guo
Copyright © 2010 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim
ISBN: 978-3-527-32288-6

3.3.3.3	Excitation Types	48
3.3.3.4	Experimental Setup and Data Acquisition	49
3.4	Magnetic Characterization of Ferromagnetic Structures	50
3.4.1	Spin-Reorientation Transition in Ferromagnetic Multilayers on Nanospheres	50
3.4.2	Magnetic Characterization of Magnetic Vortex Structures	52
3.4.2.1	In-Plane Magnetization of a Vortex Structure	53
3.4.2.2	Out-of-Plane Magnetization of a Vortex Structure	54
3.5	Magnetization Dynamics in Ferromagnetic Vortex Structures	56
3.5.1	Differential Imaging of Magnetic Vortex Structures	57
3.5.2	Gyrotropic Mode	60
3.5.2.1	Resonant Behavior under Pulsed Excitation	60
3.5.2.2	Resonant Sine Excitation	64
3.5.3	Nonlinear Response of Magnetic Vortex Structures	67
3.5.3.1	Vortex Core Reversal by Burst Excitation	68
3.5.3.2	Vortex Core Reversal – Mechanism	71
3.5.3.3	Final Remarks	73
3.6	Conclusion and Outlook	73
	Acknowledgments	74
	References	74
4	Scanning Photoelectron Microscopy for the Characterization of Novel Nanomaterials	79
	<i>Jau-Wern Chiou and Chia-Hao Chen</i>	
4.1	Introduction	79
4.2	Photoelectron Spectroscopy	80
4.3	Scanning Photoelectron Microscopy	87
4.3.1	The Focusing Optics	88
4.3.2	The Electron Energy Analyzer	91
4.3.3	The Sample Scanning Mechanism	93
4.4	The Application of Scanning Photoelectron Microscopy	96
4.4.1	Oxidation States in Scanning-Probe-Induced Si_3N_4 to SiO_x Conversion	96
4.4.2	Well-Aligned Carbon Nanotubes	100
4.4.3	GaN Nanowires	103
4.4.4	Well-Aligned ZnO Nanorods	106
4.4.5	Diameter Dependence of the Electronic Structure of ZnO Nanorods Determined by Scanning Photoelectron Microscopy	108
4.4.6	Comparison of the Electronic Structures of $\text{Zn}_{1-x}\text{Co}_x\text{O}$ and $\text{Zn}_{1-x}\text{Mg}_x\text{O}$ Nanorods	109
4.5	Conclusion	113
	Acknowledgments	114
	References	114

5	Coherent X-Ray Diffraction Microscopy	119
	<i>Stefano Marchesini and David Shapiro</i>	
5.1	Introduction	119
5.1.1	A Brief History of the Phase Problem	120
5.1.2	Scattering of X-Rays by Homogeneous Media	124
5.1.2.1	The First Born Approximation	124
5.1.3	The First Rytov Approximation	126
5.1.4	Comparison of CXDM with other X-Ray Microscopes	127
5.2	Iterative Algorithms	128
5.2.1	General Formalism	128
5.2.2	Acceleration Strategies	132
5.3	Experimental Design	133
5.3.1	Sampling and Transverse Coherence	134
5.3.2	Temporal Coherence	135
5.4	Data Acquisition and Prereconstruction Analysis	136
5.4.1	Data Assembly	137
5.4.2	Prereconstruction Diagnostics	141
5.5	Image Reconstruction	143
5.5.1	Image Averaging	145
5.5.2	Missing Data	147
5.5.3	Resolution Analysis	149
5.5.4	Three-Dimensional Objects	151
5.6	Applications	152
5.6.1	Cell Biology	153
5.6.2	Materials Science	155
5.6.3	Ultrafast Science	157
5.7	X-Ray Holography and Scanning Methods	159
5.7.1	Scanning Methods	163
5.8	Conclusions	163
	Acknowledgments	164
	References	164
	Further Reading	168
 6	 Many-Body Interactions in Nanoscale Materials by Angle-Resolved Photoemission Spectroscopy	 169
	<i>Eli Rotenberg</i>	
6.1	Introduction: Why Do We Care about the Bandstructure?	169
6.2	Bandstructure for Beginners	170
6.3	What is ARPES?	178
6.4	ARPES as a Probe of Many-Body Interactions in Nanostructures	185
6.4.1	Thin Films	186
6.4.2	Two-Dimensional States	191
6.4.3	Direct Observation of Many-Body Interactions	192
6.4.4	One-Dimensional Structures	198

6.5	Toward NanoARPES – A New Tool for Nanoscience at Synchrotrons	199
6.5.1	nARPES of Polycrystalline Samples	203
6.6	Summary and Outlook	204
	Acknowledgments	205
	References	206
7	Soft X-Ray Absorption and Emission Spectroscopy in the Studies of Nanomaterials	211
	<i>Jinghua Guo</i>	
7.1	Introduction	211
7.2	Electronic Structure of Nanostructured Materials	212
7.3	Soft X-Ray Process and Spectroscopy	214
7.3.1	Soft X-Ray Absorption Edges	214
7.3.2	X-Ray Absorption Spectroscopy	216
7.3.3	X-Ray Emission Spectroscopy	217
7.3.4	Resonant X-Ray Emission Spectroscopy	218
7.3.5	Experimental Details	219
7.3.5.1	Undulator Beamline	220
7.3.5.2	End-Station and Fluorescence Spectrometer	220
7.4	Chemical Sensitivity of X-Ray Spectroscopy	222
7.4.1	π - and σ -Bonding Character	222
7.4.2	N Chemical Sites in CN_x	223
7.5	Fullerenes and Carbon Nanotubes	224
7.5.1	Fullerenes	226
7.5.1.1	C_{60}	226
7.5.1.2	C_{60} , C_{70} , and C_{84}	229
7.5.1.3	Carbon Nanotubes	230
7.6	Buried Atomical Layers and Interfaces	234
7.7	Nanostructured 3d Transition Metal Oxides	238
7.7.1	ZnO Nanocrystal	238
7.7.2	Nanostructured Hematite	240
7.7.3	Nanostructured TiO_2 and Li Insertion	243
7.7.4	NiCl_2 in Water Solution	245
7.7.5	<i>In Situ</i> Characterization of Co Nanoparticles	247
	Acknowledgments	249
