Abstract	iii
Acknowledgements	iv
1 Introduction and Motivation	1
2 A Thin Layer of Thin Beams	5
2.1 The statement of the problem	5
2.1.1 Geometry	5
2.1.2 Strong formulation	7
2.1.3 Weak formulation	8
2.2 Decomposition of the displacements in $\Omega_{r,\varepsilon,\delta}^i$	9
2.2.1 Displacement of a single beam. Preliminary estimates	9
2.3 A priori estimates	16
2.3.1 Decomposition of the displacements in $\Omega_{r,\varepsilon,\delta}^i$	16
2.3.2 Estimates of the interface traces	18
2.3.3 Estimates of the displacements in Ω_δ^+	19
2.3.4 Estimates for the set of beams $\Omega_{r,\varepsilon,\delta}^i$	21
2.3.5 The limit cases	22
2.3.6 Force assumptions	24
2.4 The periodic unfolding operators	25
2.4.1 The limit fields (Cases (i) and (ii))	27

2.5	The limit problem	30
2.5.1	The equations for the domain Ω_ε^i	30
2.5.2	The equations for the macroscopic domain	35
2.6	Summarize	46
2.6.1	Strong formulation	46
2.6.2	Convergences	50
2.7	Complements	54
2.8	Appendix	55
3	A Soft Thin Layer with Contact	57
3.1	Geometric statement of the problem	57
3.2	Some inequalities related to unfolding and the geometric domain . . .	60
3.2.1	The boundary-layer unfolding operator $\mathcal{T}_\varepsilon, \mathcal{T}_\varepsilon^{bl,j}$	60
3.2.2	Unilateral Korn inequality	62
3.2.3	Korn inequality for a perforated layer	65
3.3	Convergence results	72
3.4	The contact problem for fixed ε	75
3.4.1	A priori estimates and existence of solutions for the Problem $\mathcal{P}_\varepsilon$	77
3.5	Main result	81
3.5.1	Hypotheses on $g_\varepsilon^j, G_\varepsilon^j$ and f_ε^j	81
3.5.2	The limit problem	82
3.5.3	Computation of the effective outer-plane properties for a case of heterogeneous layer without contact	92
4	Numerical Results	96
4.1	A thin layer of thin beams (anisotropic scaling)	97
4.2	A thin layer with inclusions (isotropic scaling)	101
5	Summary	103
