

1	General Introduction	1
1.1	Dioxygen Activation in Nature	1
1.1.1	Binding of Dioxygen	1
1.1.2	Activation of Dioxygen	2
1.2	Mimicking Non-heme Diiron Proteins	3
1.2.1	The Soluble Methane Monooxygenase	3
1.2.2	Synthetic Diiron Complexes	6
1.3	Mimicking Copper in Biological Systems	9
1.3.1	Dinuclear Parent Enzymes	10
1.3.2	Copper Dioxygen Adducts: Insights from Model Chemistry	11
1.3.3	Dicopper Hydroperoxo Compounds	14
1.4	Nitric Oxide Reduction by Dinuclear Non-Heme Enzymes	15
1.4.1	Mechanistic Proposals	16
1.4.2	Synthetic Models for N ₂ O Production from NO	17
2	Objective	19
3	Syntheses of Pyrazolate/tacn Ligand Scaffolds	21
3.1	Pyrazolate-Based Ligand Frameworks	21
3.1.1	Syntheses of Triazacyclononane Side Arms	24
3.1.2	Syntheses of Pyrazole Building Blocks	25
3.1.3	Ligand Syntheses	26
3.2	Summary and Conclusions	28
4	Modeling Diiron Active Sites in the Diferrous State	31
4.1	Diiron(II) Complexes with HL ¹	32
4.1.1	A Carboxylate-Bridged Iron(II) Complex	32
4.1.2	Implications for Dioxygen Chemistry	36
4.1.3	A Diiron(II) Complex with a Weakly-Coordinating Anion	37
4.2	Diiron(II) Complexes with HL ²	40
4.2.1	Synthesis and Characterization	40
4.3	A Diiron(II) Complex with HL ³	45
4.4	Summary and Conclusions	49

5	Dioxygen Activation with Diferrous Model Complexes	51
5.1	Dioxygen Reactivity of Complexes Derived from L ¹	52
5.1.1	Spectroscopic Insights into Carboxylate-Bridged Complex 1	52
5.1.2	Reactivity of the Triflate-Bridged Compound 2	54
5.2	Dioxygen Reactivity of Complexes Derived from L ²	55
5.2.1	Room Temperature Reactivity	55
5.2.2	Low Temperature Reactivity	60
5.3	Oxidation Chemistry with Compound 4	67
5.4	Summary and Conclusions	69
6	Exploring the NO Chemistry of Diiron Complexes	71
6.1	Formation of Dinitrosyl Compounds from Nitrile Precursors	72
6.1.1	IR- and UV-vis Analysis of the Dinitrosyl Adducts	72
6.1.2	Structure Determination	74
6.1.3	Mössbauer Spectra and Magnetic Properties	75
6.1.4	Electrochemical Properties of Dinitrosyl Diiron Complexes and Characterization of Reduction Products	77
6.2	Summary and Conclusions	86
7	The First Ferromagnetically Coupled Peroxodicopper(II) Complex	89
7.1	Synthesis of a Dicopper(I) Complex Suitable for Dioxygen Binding	90
7.2	Formation of a Peroxodicopper(II) complex	92
7.2.1	Properties in Solution	92
7.2.2	Ground State Determination: Properties in Solid State	94
7.2.3	DFT Calculations	98
7.3	Reactivity Towards Organic Molecules, Stability, and Decay Product	100
7.3.1	Reactivity	100
7.3.2	Stability of the Peroxo Compound and Characterization of the Decay Product	101
7.4	Summary and Conclusions	106
8	Proton-Induced Reversible Formation of a Hydroperoxodicopper(II) Complex	109
8.1	Protonation of the Peroxo Moiety	111
8.1.1	Characterization by UV-vis and NMR Spectroscopy	112
8.1.2	Vibrational Spectroscopy	113
8.1.3	Structure Determination	115
8.1.4	Magnetic Properties	117
8.1.5	DFT Calculations	118
8.2	Reversibility of the Protonation Process	119
8.2.1	pK _a Determination	119
8.2.2	Stopped-Flow Analysis	122
8.3	Reactivity, Decay and Interaction with Other Lewis Acids	123
8.3.1	Decay and Reaction with Organic Substrates	123
8.3.2	Interaction of Peroxo Complex 10 with Other Lewis Acids	125

8.4 Summary and Conclusions	128
9 Summary and Perspective	131
10 Experimental Section	133
10.1 General Remarks	133
10.2 Mössbauer Experiments	134
10.3 Magnetic Measurements	134
10.4 Optical and Vibrational Spectroscopy	135
10.5 Cyclic Voltammetry and Spectroelectrochemistry	136
10.6 DFT Calculations	136
10.7 Crystallography	136
10.8 Synthesis of Building Blocks and Ligands	137
10.8.1 Synthesis of 1,4-Diisopropyl-1,4,7-triazacyclononane and 1,4-Dimethyl-1,4,7-triazacyclononane	137
10.8.2 Synthesis of 3,5-Bis(chloromethyl)-1-(tetrahydropyran-2-yl)-pyrazole	139
10.8.3 Synthesis of 3,5-Bis(chloroethyl)-1-(tetrahydropyran-2-yl)-pyrazole	140
10.8.4 Synthesis of HL ¹	141
10.8.5 Synthesis of HL ² · 5 HClO ₄	142
10.8.6 Synthesis of HL ³ · 7 HClO ₄	142
10.9 Synthesis of Complexes	143
10.9.1 Synthesis of [L ¹ Fe ₂ (μ-OBz)](BPh ₄) ₂ (1)	143
10.9.2 Synthesis of [L ¹ {Fe(EtCN)} ₂ (μ-OTf)](OTf) ₂ (2)	144
10.9.3 Synthesis of [L ² Fe(MeCN) ₂ (μ-OAc)](ClO ₄) ₂ (3a)	144
10.9.4 Synthesis of [L ² {Fe(EtCN)} ₂ (μ-OBz)](BPh ₄) ₂ (3b)	144
10.9.5 Synthesis of [L ³ Fe ₂ (μ-OH)](BPh ₄) (4)	145
10.9.6 Synthesis of [L ² Fe ₂ (μ-O)(μ-OAc)](ClO ₄) ₂ (5a)	145
10.9.7 Synthesis of [L ² Fe ₂ (μ-O)(μ-OBz)](BPh ₄) ₂ (5b)	146
10.9.8 Synthesis of [L ³ Fe ₂ (μ-O)(μ-OAc)](BPh ₄) (6)	146
10.9.9 Synthesis of [L ² {Fe(NO)} ₂ (μ-OAc)](ClO ₄) ₂ (7a)	146
10.9.10 Synthesis of [L ² {Fe(NO)} ₂ (μ-OBz)](BPh ₄) ₂ (7b)	147
10.9.11 Synthesis of [L ² Fe ₂ (NO) ₂](ClO ₄) and [L ² Fe ₂ (μ-OAc) ₂](ClO ₄) (8a' and 8a'')	147
10.9.12 Synthesis of [L ³ Cu ₂](BPh ₄) (9)	148
10.9.13 Synthesis of [L ³ Cu ₂ (μ-η ¹ :η ¹ O ₂)](BPh ₄) (10)	149
10.9.14 Synthesis of [L ³ Cu ₂ (μ-OH)](BPh ₄) ₂ (11)	149
10.9.15 Synthesis of [L ³ Cu ₂ (μ-1,1-OOH)](OTf)(BPh ₄) (13)	149
