Part I Solitons, self-confined light and optical turbulence

1	Light Self-trapping in Nematic Liquid Crystals	3
	Mirosław A. Karpierz and Gaetano Assanto	
1.1	Introduction	3
1.2	Reorientational Self-focusing in Nematic Liquid Crystals	4
1.3	Spatial Optical Solitons in Purely Nematic Liquid Crystals	7
1.4	Spatial Optical Solitons in Chiral Nematic Liquid Crystals	11
1.5	Conclusions	14
	References	15
2	Photonic Plasma Instabilities and Soliton Turbulence in Spatially Incoherent Light	17
	Dmitry V. Dylov and Jason W. Fleischer	
2.1	Introduction	18
2.2	Basic Theory and Formalism	19
2.2.1	Wigner Formalism	19
2.2.2	Initial Stages of Instability. Linear Perturbation Theory ..	21
2.2.3	Growth Rate and Conditions for Weak/Strong Turbulence	22
2.2.4	Debye Scaling	24
2.3	Quasi-Linear Approximation	25
2.3.1	General Derivation	26
2.3.2	Bump-on-Tail Dynamics	27
2.4	Numerical Analysis	28
2.4.1	Numerical Results for BOT Instability	28
2.4.2	Numerical Results for Multiple BOT Instability	29
2.5	Experimental Observation	30
2.5.1	Experimental Setup	30
2.5.2	Single Bump-on-Tail Instability	31
2.5.3	Holographic Readout of Dynamics	34

2.5.4	Multiple Bump-on-Tail Instability and Long-Range Turbulence Spectra	35
2.6	Discussion and Conclusions	37
	References	37
3	Gap-Acoustic Solitons: Slowing and Stopping of Light	41
	Richard S. Tasgal, Roman Shnaiderman, and Yehuda B. Band	
3.1	Introduction	42
3.2	Derivation of the Equations	45
3.2.1	Electromagnetic Field Equations with Phonon Perturbations	45
3.2.2	Acoustic Wave Equations with Electrostrictive Perturbations	48
3.2.3	The Bragg-Brillouin-Kerr System	51
3.3	Lagrangian, Hamiltonian, and Conserved Quantities	51
3.3.1	Dimensionless Variables	53
3.4	Gap-Acoustic Solitons	54
3.5	Soliton Stability and Instability	57
3.6	Summary and Conclusions	64
	References	66
4	Optical Wave Turbulence and Wave Condensation in a Nonlinear Optical Experiment	67
	Jason Laurie, Umberto Bortolozzo, Sergey Nazarenko and Stefania Residori	
4.1	Introduction	68
4.2	Experimental setup	69
4.3	Theoretical Background	70
4.3.1	Evolution Equation	70
4.3.2	Long-Wave Model	71
4.3.3	The Fjørtoft Argument	72
4.3.4	Hamiltonian Formulation	74
4.3.5	Canonical Transformation	75
4.3.6	The Kinetic Wave Equation	76
4.3.7	Modulational Instability and the Creation of Solitons	79
4.4	Numerical Method	80
4.5	Experimental and Numerical Results	80
4.5.1	Direct cascade of energy	84
4.6	Conclusions	85
4.7	Acknowledgements	86
	References	86

Part II Localized structures in pattern forming systems

5	Localized Structures in the Liquid Crystal Light Valve Experiment . . .	91
	Umberto Bortolozzo, Marcel G. Clerc, René G. Rojas, Florence Haudin and Stefania Residori	
5.1	Introduction	92
5.2	The Liquid Crystal Light Valve Experiment	93
5.2.1	Description of the setup	93
5.2.2	The optical feedback: model equations	95
5.3	Experimental Observations of Optical Localized Structures	97
5.3.1	Round localized structures: interaction and dynamics	97
5.3.2	Triangular localized structures: bistability and phase singularities	98
5.3.3	Bipatterns and localized peaks	100
5.3.4	1D spatially forced model	101
5.4	Control of Optical Localized Structures	102
5.4.1	Pinning range and localized structures	102
5.4.2	Controlled storage of localized structures matrices	103
5.5	Propagation Properties of Optical Localized Structures	105
5.6	Conclusions	107
	References	107
6	Convectons	109
	Arantxa Alonso, Oriol Batiste, Edgar Knobloch and Isabel Mercader	
6.1	Introduction	109
6.2	Convectons with periodic boundary conditions	112
6.3	Convectons with ICCBC	116
6.4	Multiconvectons	118
6.5	Localized traveling waves	119
6.6	Interpretation	120
6.7	Summary	123
	References	124
7	Morphological Characterization of Localized Hexagonal Patterns . . .	127
	Daniel Escaff Dixon	
7.1	Introduction	127
7.2	Prototypical Model for Hexagon Formation	129
7.3	Localized Hexagonal States: Geometrical Considerations and Morphological Characterizations	130
7.4	Heuristic Description of the Localization Process	133
7.5	The Case of a Localized Line of Cells	135
7.6	Conclusions and Perspective	137
	References	138

Part III Localized structures for optical applications

8	Cavity Solitons in Vertical Cavity Surface Emitting Lasers and their Applications	141
	Massimo Giudici, Francesco Pedaci, Emilie Caboche, Patrice Genevet, Stephane Barland, Jorge Tredicce, Giovanna Tissoni and Luigi Lugiato	
8.1	Introduction	142
8.2	CS motion	143
8.2.1	Numerical Analysis of CS motion in a constant phase gradient	144
8.2.2	Experimental Evidence of CS motion in a constant phase gradient	146
8.3	Applications of CS movement	150
8.3.1	CS drift in a constant gradient	150
8.3.2	Experimental realization of reconfigurable CS arrays	151
8.4	CS motion and device defects	155
8.4.1	CS force microscope	156
8.4.2	Modeling of an inhomogeneous device	157
8.4.3	Interaction between phase gradient and defects: the CS tap	158
8.5	Conclusions	165
	References	166
9	Cavity Soliton Laser based on coupled micro-resonators	169
	Patrice Genevet, Stéphane Barland, Massimo Giudici, and Jorge R. Tredicce	
9.1	Introduction	170
9.2	Experimental Setup	171
9.3	Bistability regime	173
9.3.1	Multistable Regime	175
9.3.2	Local bifurcation diagram	176
9.3.3	Towards the whole bifurcation diagram	178
9.4	Coherence properties of laser solitons	181
9.4.1	Modal properties	182
9.5	Conclusions and Perspectives	184
	References	185
10	Cavity soliton laser based on a VCSEL with saturable absorber	187
	Giovanna Tissoni, Keivan M. Aghdami, Franco Prati, Massimo Brambilla and Luigi A. Lugiato	
10.1	Introduction	188
10.2	The model	190
10.2.1	Bistability	191
10.2.2	Plane wave instabilities	193
10.2.3	Pattern forming instabilities	193
10.3	CS switching techniques	194

10.3.1	Switching dynamics	196
10.3.2	Switching energy	201
10.4	Stability of the CS	203
10.5	Motion of the CS in a finite device	206
10.5.1	Circular pump	206
10.6	Conclusions	208
	References	210
11	Dynamic Control of Localized Structures in a Nonlinear Feedback Experiment	213
	Mousa Ayoub, Björn Gütlich, Cornelia Denz, Francesco Papoff, Gian-Luca Oppo, and William J. Firth	
11.1	Introduction	214
11.2	Self-organized localized structures in feedback systems	215
11.3	Localized structures in a single-feedback system using a liquid crystal light valve as a nonlinearity	219
11.3.1	Formation of localized structures	221
11.4	Boundary-induced localized structures in LCLV	223
11.5	Dynamic and static position control of feedback localized states ..	227
11.6	Gradient induced motion control of feedback localized structures ..	231
11.7	Summary	236
	References	236
Part IV Excitability and localized states		
12	Interaction of oscillatory and excitable localized states in a nonlinear optical cavity	241
	Damià Gomila, Adrián Jacobo, Manuel A. Matías, and Pere Colet	
12.1	Introduction	241
12.2	Model	242
12.3	Overview of the behavior of localized states	243
12.3.1	Hopf bifurcation	244
12.3.2	Saddle-loop bifurcation	244
12.3.3	Excitability	246
12.4	Interaction of two oscillating localized states	246
12.4.1	Full system	247
12.4.2	Simple model: two coupled Landau-Stuart oscillators ..	251
12.5	Interaction of excitable localized states: logical gates	259
12.6	Summary	263
	References	263
13	Lurching waves in thalamic neuronal networks	265
	Jaime E. Cisternas, Thomas M. Wasylenko, and Ioannis G. Kevrekidis	
13.1	Introduction	265
13.2	The model	267
13.2.1	Smooth and Lurching waves	270

13.3	Exploration of parameter space and continuation	272
13.3.1	Direct time integration	272
13.3.2	Continuation using Newton method	274
13.3.3	Pseudo-arclength continuation	278
13.4	Discussion	279
	References	280
