

Contents

1	Introduction to Image Analysis — 1
1.1	Image and Image Engineering — 1
1.1.1	Image Foundation — 1
1.1.2	Image Engineering — 3
1.2	The Scope of Image Analysis — 6
1.2.1	Definition and Research Content of Image Analysis — 6
1.2.2	Image Analysis System — 10
1.3	Digitization in Image Analysis — 12
1.3.1	Discrete Distance — 12
1.3.2	Connected Component — 15
1.3.3	Digitizing Model — 16
1.3.4	Digital Arcs and Chords — 21
1.4	Distance Transforms — 23
1.4.1	Definition and Property — 24
1.4.2	Computation of Local Distances — 25
1.4.3	Implementation of Discrete Distance Transformation — 26
1.5	Overview of the Book — 29
1.6	Problems and Questions — 30
1.7	Further Reading — 32
2	Image Segmentation — 33
2.1	Definition and Classification — 33
2.1.1	Definition of Segmentation — 33
2.1.2	Classification of Algorithms — 34
2.2	Basic Technique Groups — 36
2.2.1	Boundary-Based Parallel Algorithms — 36
2.2.2	Boundary-Based Sequential Algorithms — 39
2.2.3	Region-based Parallel Algorithms — 41
2.2.4	Region-based Sequential Algorithms — 44
2.3	Extension and Generation — 46
2.3.1	Extending 2-D Algorithms to 3-D — 46
2.3.2	Generalization of Some Techniques — 50
2.4	Segmentation Evaluation — 56
2.4.1	A Survey on Evaluation Methods — 56
2.4.2	An Effective Evaluation Method — 61
2.4.3	Systematic Comparison — 62
2.5	Problems and Questions — 66
2.6	Further Reading — 67
3	Object Representation and Description — 69
3.1	Classification of Representation and Description — 69
3.2	Boundary-Based Representation — 71

3.2.1	Taxonomy of Boundary-Based Representation —	71
3.2.2	Chain Codes —	71
3.2.3	Boundary Segments —	72
3.2.4	Polygonal Approximation —	73
3.2.5	Boundary Signatures —	75
3.2.6	Landmark Points —	77
3.3	Region-Based Representation —	79
3.3.1	Taxonomy of Region-Based Representation —	79
3.3.2	Bounding Regions —	80
3.3.3	Quad-Trees —	81
3.3.4	Pyramids —	82
3.3.5	Skeletons —	84
3.4	Transform-Based Representation —	85
3.4.1	Technique Classification —	86
3.4.2	Fourier Boundary Representation —	86
3.5	Descriptors for Boundary —	88
3.5.1	Some Straightforward Descriptors —	88
3.5.2	Shape Numbers —	90
3.5.3	Boundary Moments —	91
3.6	Descriptors for Regions —	92
3.6.1	Some Basic Descriptors —	92
3.6.2	Topological Descriptors —	97
3.7	Problems and Questions —	101
3.8	Further Reading —	103
4	Feature Measurement and Error Analysis —	104
4.1	Direct and Indirect Measurements —	104
4.1.1	Direct Measurements —	104
4.1.2	Derived Measurements —	105
4.1.3	Measurement Combinations —	105
4.2	Accuracy and Precision —	106
4.2.1	Definitions —	106
4.2.2	Relationships —	107
4.2.3	Statistical Error and Systematic Error —	108
4.3	Two Types of Connectivity —	109
4.3.1	Boundary Points and Internal Points —	109
4.3.2	Object Points and Background Points —	110
4.3.3	Separating Connected Components —	110
4.3.4	Open Set and Closed Set —	111
4.4	Feature Measurement Error —	112
4.4.1	Different Factors Influencing Measurement Accuracy —	112
4.4.2	Influence of Optical Lens Resolution —	113

4.4.3	Influence of Sampling Density —	115
4.4.4	Influence of Segmentation —	118
4.4.5	Influence of Computation Formulas —	123
4.4.6	Combined Influences —	125
4.5	Error Analysis —	126
4.5.1	Upper and Lower Bounds of an 8-Digital Straight Segment —	126
4.5.2	Approximation Errors —	127
4.6	Problems and Questions —	129
4.7	Further Reading —	130
5	Texture Analysis —	132
5.1	Concepts and Classification —	132
5.1.1	Meanings and Scale —	132
5.1.2	Research and Application Related to Texture —	133
5.1.3	Approaches for Texture Analysis —	134
5.2	Statistical Approaches —	136
5.2.1	Co-occurrence Matrix —	136
5.2.2	Descriptors Based on a Gray-Level Co-occurrence Matrix —	139
5.2.3	Law's Texture Energy Measurements —	142
5.3	Structural Approaches —	144
5.3.1	Two Basic Components —	144
5.3.2	Typical Structural Methods —	146
5.3.3	Local Binary Mode —	147
5.4	Spectral Approaches —	151
5.4.1	Fourier Spectrum —	151
5.4.2	Bessel-Fourier Spectrum —	153
5.4.3	Gabor Spectrum —	154
5.5	Texture Segmentation —	156
5.5.1	Supervised Texture Segmentation —	157
5.5.2	Unsupervised Texture Segmentation —	159
5.5.3	Texture Classification Based on Wavelet Transformation —	163
5.6	Problems and Questions —	164
5.7	Further Reading —	166
6	Shape Analysis —	167
6.1	Definitions and Tasks —	167
6.1.1	Definition of Shape —	168
6.1.2	Shape Analysis Tasks —	169
6.2	Different Classes of 2-D Shapes —	170
6.2.1	Classification of Shapes —	170

6.2.2	Further Discussions —	170
6.3	Description of Shape Property —	173
6.3.1	Compactness Descriptors —	173
6.3.2	Complexity Descriptors —	177
6.4	Technique-Based Descriptors —	181
6.4.1	Polygonal Approximation-Based Shape Descriptors —	181
6.4.2	Curvature-Based Shape Descriptors —	183
6.5	Wavelet Boundary Descriptors —	189
6.5.1	Definition and Normalization —	189
6.5.2	Properties of the Wavelet Boundary Descriptor —	191
6.5.3	Comparisons with Fourier Descriptors —	193
6.6	Fractal Geometry —	196
6.6.1	Set and Dimension —	196
6.6.2	The Box-Counting Approach —	196
6.6.3	Implementing the Box-Counting Method —	198
6.6.4	Discussions —	199
6.7	Problems and Questions —	200
6.8	Further Reading —	201
7	Motion Analysis —	202
7.1	The Purpose and Subject of Motion Analysis —	202
7.1.1	Motion Detection —	203
7.1.2	Locating and Tracking Moving Objects —	203
7.1.3	Moving Object Segmentation and Analysis —	204
7.1.4	Three-Dimensional Scene Reconstruction and Motion Understanding —	204
7.2	Motion Detection —	204
7.2.1	Motion Detection Using Image Differences —	204
7.2.2	Model-Based Motion Detection —	208
7.3	Moving Object Detection —	210
7.3.1	Background Modeling —	210
7.3.2	Optical Flow —	217
7.3.3	Detecting Specific Movement Pattern —	220
7.4	Moving Object Segmentation —	222
7.4.1	Object Segmentation and Motion Information Extraction —	222
7.4.2	Dense Optical Flow Algorithm —	223
7.4.3	Parameter and Model-Based Segmentation —	227
7.5	Moving Object Tracking —	230
7.5.1	Typical Technology —	231
7.5.2	Subsequences Decision Strategy —	236
7.6	Problems and Questions —	238
7.7	Further Reading —	239

8	Mathematical Morphology — 241
8.1	Basic Operations of Binary Morphology — 241
8.1.1	Binary Dilation and Erosion — 242
8.1.2	Binary Opening and Closing — 246
8.2	Combined Operations of Binary Morphology — 250
8.2.1	Hit-or-Miss Transform — 250
8.2.2	Binary Composition Operations — 251
8.3	Practical Algorithms of Binary Morphology — 256
8.3.1	Noise Removal — 256
8.3.2	Corner Detection — 257
8.3.3	Boundary Extraction — 258
8.3.4	Object Detection and Localization — 258
8.3.5	Region Filling — 259
8.3.6	Extraction of Connected Components — 260
8.3.7	Calculation of Region Skeleton — 261
8.4	Basic Operations of Grayscale Morphology — 262
8.4.1	Grayscale Dilation and Erosion — 262
8.4.2	Grayscale Opening and Closing — 267
8.5	Combined Operations of Grayscale Morphology — 268
8.5.1	Morphological Gradient — 268
8.5.2	Morphological Smoothing — 269
8.5.3	Top Hat Transform and Bottom Hat Transform — 270
8.5.4	Morphological Filters — 270
8.5.5	Soft Morphological Filters — 272
8.6	Practical Algorithms of Grayscale Morphology — 274
8.6.1	Background Estimation and Elimination — 274
8.6.2	Morphological Edge Detection — 275
8.6.3	Cluster Fast Segmentation — 277
8.7	Problems and Questions — 279
8.8	Further Reading — 281

Answers to Selected Problems and Questions — 283
