Preface	VII
List of Figures	XIV
List of Tables	XV
List of Notations	XVII
1 Introduction	1
1.1 Background	1
1.2 Basic Concepts and Motivation of the Work	1
1.2.1 Basic Concepts of Fault Detection	1
1.2.2 Motivation for the Work	2
1.3 Objectives of the Dissertation	9
1.4 Outline of the Dissertation	9
2 The Basics of Fault Detection	13
2.1 Mathematical Descriptions of Industrial Processes	13
2.1.1 Representation of Static Processes	13
2.1.2 Representation of Dynamic Processes	14
2.2 Basic Principle of Fault Detection	15
2.3 Basic Statistical Fault Detection Methods	16
2.3.1 T^2 and Q Test Statistics	17
2.3.2 Principal Component Analysis-based Method	18
2.3.3 Partial Least Squares-based Method	21
2.3.4 Dynamical PCA-based Method	22
2.4 Quantitative Model-based Residual Generation	23
2.4.1 FDF-based Residual Generation	23
2.4.2 DO-based Residual Generation	24
2.4.3 PS-based Residual Generation	24
2.4.4 Kernel Representation	25

2.5	Data-Driven Kernel Representation-based FD Methods	26
2.5.1	Data-Driven Realization of the Kernel Representation	26
2.5.2	Data-Driven PS-based Method	27
2.5.3	Data-Driven DO-based Method	28
2.6	Concluding Remarks	30
3	Evaluation and Comparison of T^2 and Q Statistics for Fault Detection	31
3.1	Performance Evaluation	31
3.1.1	FAR and FDR	31
3.1.2	Mean Time to A False Alarm	33
3.2	Geometric Relationship between T^2 and Q Statistics	34
3.2.1	Distribution of Q is Approximated by $\lambda_1\chi^2(m)$	36
3.2.2	Distribution of Q is Approximated by $\text{tr}(\Sigma_y)\chi^2(1)$	37
3.2.3	Distribution of Q is Approximated by $g\chi^2(h)$	37
3.3	Numerical Example Study	38
3.3.1	Example for Geometric Relationship	39
3.3.2	Example for Performance Evaluation	39
3.4	Concluding Remarks	42
4	Canonical Correlation Analysis-based Fault Detection Methods	43
4.1	Background and Problem Formulation	43
4.2	The Basic of CCA Technique	45
4.3	CCA-based FD Method for Static Processes	46
4.3.1	CCA-based FD Method	46
4.3.2	An Illustrative Example	49
4.4	DCCA-based FD Method for Dynamic Processes	50
4.4.1	Modeling of Input and Output Data Sets	50
4.4.2	DCCA-based FD Method	53
4.4.3	An Illustrative Example	55
4.5	Discussions	57
4.6	Concluding Remarks	58
5	Improved CCA-based Fault Detection Methods	59
5.1	Background and Problem Formulation	59
5.1.1	Background	59
5.1.2	A Motivation Example	60
5.2	Integrating the Statistical Local Approach into CCA for FD	61
5.2.1	Introduction of the Statistical Local Approach	61
5.2.2	Derivation of the Primary Residual	62
5.2.3	The Fault Detection Method	63

5.3	On Detecting Incipient Multiplicative Faults Using the T^2 Statistic	65
5.3.1	T^2 Statistic for Detecting Multiplicative Faults	66
5.3.2	Statistical Local Approach for Detecting Incipient Multiplicative Faults	67
5.4	Concluding Remarks	68
6	A Projection-based FD method for Dynamic Processes with determin- istic disturbances	71
6.1	Background and Problem Formulation	71
6.1.1	Background	71
6.1.2	Problem Formulation	72
6.2	I/O Data Model with Deterministic Disturbances and Faults	72
6.3	The Projection-based Data-Driven FD Method	75
6.3.1	On-line Update Orthogonal Projection Matrix	76
6.3.2	Algorithm for the Proposed Approach	77
6.3.3	Discussions	77
6.4	Concluding Remarks	78
7	Benchmark Studies	79
7.1	Case Study on the Alumina Evaporation Benchmark Process	79
7.1.1	Process Description	79
7.1.2	Application of the CCA-based Methods	80
7.2	Case Study on the CSTH Benchmark Process	85
7.2.1	Process Description	85
7.2.2	Application of Improved Static CCA-based Method	86
7.3	Case Studies on the TE Benchmark Process	88
7.3.1	Process Description	88
7.3.2	Application of Improved Dynamic CCA-based Method	89
7.4	Case Study on the Inverted Pendulum Benchmark	92
7.4.1	Benchmark Description	93
7.4.2	Simulation Setting	94
7.4.3	Results and Discussion	95
7.5	Concluding Remarks	96
8	Conclusions and Future Work	99
8.1	Conclusions	99
8.2	Future Work	100
	Bibliography	103
