Preface to the Second Edition IX

Preface to the First Edition XI

1	Introduction	1
2	Bulk Crystals: Three-Dimensional Lattices	7
2.1	Basic Definition	7
2.2	Representation of Bulk Crystals	11
2.2.1	Alternative Descriptions Conserving the Lattice Representation	12
2.2.2	Alternative Descriptions Affecting the Lattice Representation	14
2.2.2.1	Cubic, Hexagonal, and Trigonal Lattices	16
2.2.2.2	Superlattices and Repeated Slabs	25
2.2.2.3	Linear Transformations of Lattice Vectors	29
2.2.3	Centered Lattices	31
2.3	Periodicity Cells of Lattices	35
2.4	Lattice Symmetry	38
2.5	Reciprocal Lattice	49
2.6	Neighbor Shells	52
2.7	Nanoparticles and Crystallites	63
2.8	Incommensurate Crystals and Quasicrystals	71
2.8.1	Modulated Structures	71
2.8.2	Incommensurate Composite Crystals	73
2.8.3	Quasicrystals	76
2.9	Exercises	82
3	Crystal Layers: Two-Dimensional Lattices	91
3.1	Basic Definition, Miller Indices	91
3.2	Netplane-Adapted Lattice Vectors	96
3.3	Symmetrically Appropriate Lattice Vectors: Minkowski Reduction	98
3.4	Miller Indices for Cubic and Trigonal Lattices	100
3.5	Alternative Definition of Miller Indices and Miller – Bravais Indices	106

3.6	Symmetry Properties of Netplanes	109
3.6.1	Centered Netplanes	110
3.6.2	Inversion	111
3.6.3	Rotation	114
3.6.4	Mirror Operation	119
3.6.5	Glide Reflection	131
3.6.6	Symmetry Groups	139
3.7	Crystal Systems and Bravais Lattices in Two Dimensions	144
3.8	Crystallographic Classification of Netplanes and Monolayers	149
3.8.1	Oblique Netplanes	151
3.8.2	Primitive Rectangular Netplanes	151
3.8.3	Centered Rectangular Netplanes	155
3.8.4	Square Netplanes	157
3.8.5	Hexagonal Netplanes	158
3.8.6	Classification Overview	163
3.9	Exercises	164
4	Ideal Single Crystal Surfaces	169
4.1	Basic Definition, Termination	169
4.2	Morphology of Surfaces, Stepped and Kinked Surfaces	175
4.3	Miller Index Decomposition	178
4.4	Chiral and Achiral Surfaces	192
4.5	Exercises	204
5	Real Crystal Surfaces	209
5.1	Surface Relaxation	209
5.2	Surface Reconstruction	210
5.3	Growth Processes	222
5.4	Faceting	226
5.5	Exercises	231
6	Adsorbate Layers	235
6.1	Definition and Classification	235
6.2	Adsorbate Sites	241
6.3	Wood Notation of Surface Structure	251
6.4	High-Order Commensurate (HOC) Overlayers	258
6.5	Interference Lattices	263
6.5.1	Basic Formalism	264
6.5.2	Interference and Wood Notation	272
6.5.3	Anisotropic Scaling, Stretching, and Shifting	279

6.6	Symmetry and Domain Formation	283
6.7	Adsorption at Surfaces and Chirality	293
6.8	Exercises	299
7	Experimental Analysis of Real Crystal Surfaces	305
7.1	Experimental Methods	305
7.2	Surface Structure Compilations	306
7.3	Database Formats for Surface and Nanostructures	311
7.4	Exercises	313
8	Nanotubes	315
8.1	Basic Definition	315
8.2	Nanotubes and Symmetry	319
8.3	Complex Nanotubes	323
8.4	Exercises	326
	Appendix A: Sketches of High-Symmetry Adsorbate Sites	329
A.1	Face-Centered Cubic (fcc) Surface Sites	330
A.2	Body-Centered Cubic (bcc) Surface Sites	338
A.3	Hexagonal Close-Packed (hcp) Surface Sites	342
A.4	Diamond Surface Sites	346
A.5	Zincblende Surface Sites	349
	Appendix B: Parameter Tables of Crystals	351
	Appendix C: Mathematics of the Wood Notation	355
C.1	Basic Formalism and Examples	355
C.2	Wood-Representability	361
	Appendix D: Mathematics of the Minkowski Reduction	367
	Appendix E: Details of Number Theory	371
E.1	Basic Definitions and Functions	371
E.2	Euclid's Algorithm	376
E.3	Linear Diophantine Equations	377
E.4	Quadratic Diophantine Equations	380
E.5	Number Theory and 2×2 Matrices	386
	Appendix F: Details of Vector Calculus and Linear Algebra	391
	Appendix G: Details of Fourier Theory	395
	Appendix H: List of Surface Web Sites	399

Appendix I: List of Surface Structures 401

Glossary and Abbreviations 403
