

Table of contents

1.	Introduction	19
1.1	Problem definition and objectives.....	19
1.2	Structure of the thesis.....	24
2.	Background and state of the art	27
2.1	Experimental investigations	27
2.1.1	Behaviour of weak rocks.....	27
2.1.2	Testing equipment	28
2.1.3	Testing procedures	32
2.2	Constitutive modelling of soft rocks for ground response analysis.....	35
3.	General descriptions of the considered materials	39
3.1	Kakirites from the Gotthard base tunnel and other similar squeezing rocks	39
3.2	Breccias from the planned Gibraltar strait tunnel	42
4.	Techniques, devices and procedures for triaxial testing of the Gibraltar weak breccias	47
4.1	Introduction	47
4.2	Sample selection.....	47
4.3	Testing devices	48
4.4	Sample preparation.....	50
4.5	Test procedure in the CD and CU tests.....	52
4.5.1	Watering	52
4.5.2	Backpressure	53
4.5.3	Consolidation	57
4.5.4	Deviatoric loading.....	58
4.6	Corrections of test results.....	61
4.6.1	Static friction between piston and cell	61
4.6.2	Influence of temperature variation on the volumetric strain.....	63
4.6.3	Calculation of the volumetric strain and of the temperature compensation.....	67
4.7	Oedometer and isotropic compression (IC) tests	69
4.7.1	Oedometer tests.....	69
4.7.2	Isotropic compression test in the triaxial testing device	72
4.7.3	Development of a new device for isotropic compression tests..	72
4.8	Conclusions	77

5.	Mechanical properties of the breccias and kakirites	79
5.1	Introduction	79
5.2	Hydraulic conductivity	79
5.3	Typical stress-strain curves	81
5.4	Strength parameters.....	86
5.5	Stress-dependency of stiffness	88
5.6	Consolidation states	90
5.7	Effect of partial saturation.....	91
5.8	Conclusions	91
6.	Constitutive models for the squeezing rock.....	93
6.1	Introduction	93
6.2	MC model.....	94
6.3	DH model	95
6.4	SHS model	96
6.5	DPC model	99
6.6	Model implementation and validation	103
	6.6.1 Implementation of DH and SHS model in ABAQUS	103
	6.6.2 Validation of the implementation by Mathematica.....	103
6.7	On the adequacy of the ignoring the out-of-plane plastic flow	107
7.	Model evaluations for Kakirites	109
7.1	Introduction	109
7.2	Model predictions under triaxial conditions	110
	7.2.1 Consolidated drained (CD) tests	110
	7.2.2 Consolidated undrained (CU) tests	115
7.3	Ground response to tunnel excavation	118
	7.3.1 Problem description	118
	7.3.2 Model predictions under drained conditions.....	119
	7.3.3 Model predictions under undrained conditions.....	122
7.4	Estimation of an adequate Young's modulus for predicting tunnel convergences with the MC model.....	124
7.5	Conclusions	128
8.	Model evaluations for Gibraltar breccias.....	131
8.1	Introduction	131
8.2	Practical significance for tunnelling	132
8.3	Model predictions under triaxial testing conditions.....	137

8.3.1	Consolidated drained (CD) test.....	137
8.3.2	Consolidated undrained (CU) test.....	139
8.4	Ground response to tunnel excavation	141
8.4.1	Problem description	141
8.4.2	Model predictions under undrained conditions.....	141
8.4.3	Model predictions under undrained conditions considering advance drainage	145
8.5	Conclusions	150
9.	Conclusions and outlook.....	151
